

Protective Case Instructions

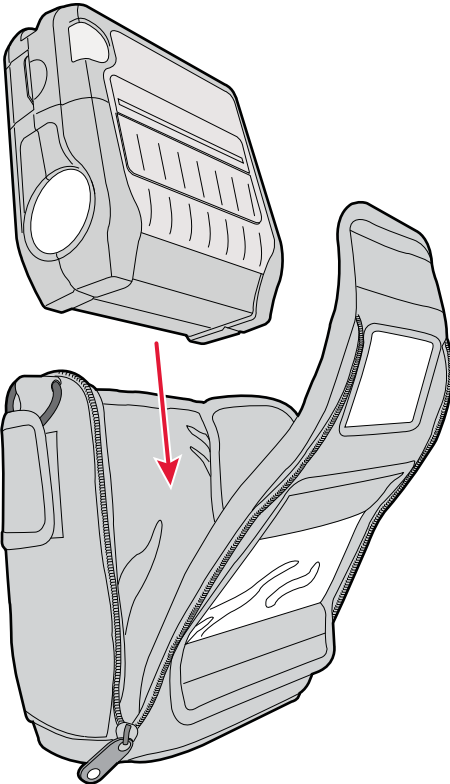

Use the protective case (P/N 825-192-001) to transport and store your PB50 or PB51 printer. The protective case provides easy access to the printer buttons, connectors, and battery, allowing you to print labels while the printer is still in the protective case. Use the handstrap or shoulder strap accessory with the protective case to make it easy to carry. The protective case kit contains these parts:

- Protective case accessory
- This instruction sheet

To insert the printer into the protective case

- 1 Unzip the main flap on the protective case and insert the printer with the control panel facing upward.

2 Close the zippers on both sides of the protective case and secure the flap over the end of the printer.

You can open the media flap to print labels while the printer is in the case. You can also attach a power cable, a USB cable, or a serial cable to the PB50 or PB51 through the flap which protects the communications port.
