Before You Begin

This section provides you with safety information, technical support information, and sources for additional product information.

Safety Information

Your safety is extremely important. Read and follow all warnings and cautions in this document before handling and operating Intermec equipment. You can be seriously injured, and equipment and data can be damaged if you do not follow the safety warnings and cautions.

This section explains how to identify and understand warnings, cautions, and notes that are in this document.

Warning: A warning alerts you of an operating procedure, practice, condition, or statement that must be strictly observed to avoid death or serious injury to the persons working on the equipment.

Caution: A caution alerts you to an operating procedure, practice, condition, or statement that must be strictly observed to prevent equipment damage or destruction, or corruption or loss of data.

Note: Notes either provide extra information about a topic or contain special instructions for handling a particular condition or set of circumstances.

Safety Precautions

- Read and review this manual carefully before connecting the printer.
- Because moving parts are exposed when the cover is open, ensure that the cover is closed before you operate the printer.
- Do not put your fingers inside the print mechanism when the power is on.
- Place the printer on an even surface which can safely support its weight and supplies.
Before You Begin

- Do not spray the printer with water. If you are using a hose to clean the premises in an industrial environment, remove the printer or carefully protect it from spray and moisture.
- You must implement both hardware and software safety precautions to prevent the possibility of undefined system states.
- You must ensure that dangerous conditions cannot occur under any circumstances, even for a brief period of time.
- Observe all safety and accident prevention regulations applicable to your specific region and application.
- Before you use a cleaning card, carefully read the warning text on the envelope.
- Replace only with same type and rating of fuse to ensure continued protection against risk of fire.

Note: This equipment may be used on an IT power system.

Global Services and Support

Warranty Information
To understand the warranty for your Intermec product, visit the Intermec web site at www.intermec.com and click Support > Returns and Repairs > Warranty.

Disclaimer of warranties: The sample code included in this document is presented for reference only. The code does not necessarily represent complete, tested programs. The code is provided “as is with all faults.” All warranties are expressly disclaimed, including the implied warranties of merchantability and fitness for a particular purpose.

Web Support
Visit the Intermec website at www.intermec.com to download our current manuals (in PDF).
Visit the Intermec technical knowledge base (Knowledge Central) at [www.intermec.com](http://www.intermec.com) and click Support > Knowledge Central to review technical information or to request technical support for your Intermec product.

**Send Feedback**
Your feedback is crucial to the continual improvement of our documentation. To provide feedback about this manual, please contact the Intermec Technical Communications department directly at ACSHSMTechnicalCommunications@Honeywell.com.

**Telephone Support**
In the U.S.A. and Canada, call 1-800-755-5505.

Outside the U.S.A. and Canada, contact your local Intermec representative. To search for your local representative, from the Intermec web site, click About Us > Contact Us.

**Who Should Read This Manual**
This user manual is for the person who is responsible for installing, configuring, operating, and maintaining the PD43 and PD43c printers.

This document provides you with information about the features of the printer, and how to install, configure, operate, maintain, and troubleshoot it.

Before you work with the printer, you should be familiar with your printer command language and general printing setup. If you are going to use the printer in a network, you should be familiar with your network and general networking terms, such as IP address.

**Related Documents**
The Intermec website at [www.intermec.com](http://www.intermec.com) contains our documents (as .pdf files) that you can download for free.

**To download documents**
2. Click the Products tab.
Before You Begin

3 Using the Products menu, navigate to your product page. For example, to find the PD43 product page, click Printers > Industrial Printers > PD43.

4 Click the Manuals tab.

If your product does not have its own product page, click Support > Manuals. Use the Product Category, the Product Family, and Product to find your documentation.

Patent Information

About the Printers

This chapter introduces the PD43 printers, and includes descriptions of printer features and basic operation.
Chapter 1 — About the Printers

About the PD43

The PD43 and PD43c printers are compact, rugged industrial printers intended for use in commercial or warehouse applications. The printers can be connected to a single desktop PC for stand-alone operation, or to a wired or wireless network for ease of connectivity.

Both printers are available in direct thermal (DT) models. The PD43 is also available in a thermal transfer (TTR) model for printing with a ribbon.

Features of both printers include:
- Print speeds of up to 8 ips (with 203-dpi printhead) or 6 ips (with 300-dpi printhead)
- Multiple selectable printer languages including Intermec Smart Printing, Fingerprint, Direct Protocol, Intermec Printer Language (IPL), DSim, ESim, and ZSim
- Ethernet option
- Wi-Fi/Bluetooth and RFID options (PD43 only)
- USB port for storage devices, keyboards, or scanners, and for connections to a PC (including serial or parallel connections with appropriate adapters)
- LCD or Icon interface
- Complete range of accessories

About the Front Panel

There are two front panels available for the printers:

- LCD (liquid crystal display)
- Icon (no display)

Both versions of the front panel include the Print button and the Ready-to-Work™ indicator. All printers include a USB host port on the front panel.

About the Ready-to-Work Indicator

The Ready-to-Work indicator on the front of the printer turns on when the printer is ready to print.

About the Ready Screen

After you turn the printer on, the Ready screen appears when the printer finishes starting up.

![Ready Screen](image)

**Note:** Icons for Wi-Fi and Bluetooth status appear only when the optional Wi-Fi/Bluetooth module is installed. The IP address appears when the printer is connected to an Ethernet or wireless network and the Idle Information parameter is set to IPv4 address.

By default, the bottom of the screen shows the printer command language, the IP address, and the time and date. You can customize the screen as necessary to show different kinds of information.

The status bar at the top of the screen includes these information and status icons:

**Information and Status Icon Descriptions**

<table>

- Wi-Fi is disabled. |
| ![Connectivity icon](image2) | Connectivity icon. Blinks when data is moving through a wired or wireless connection to the printer. |
| ![Bluetooth icon](image3) | Bluetooth icon. This icon appears when the Wi-Fi/Bluetooth module is installed:  
- Bluetooth is enabled.  
- Bluetooth is disabled. |
Chapter 1 — About the Printers

View Basic Printer and Connection Information

In the Ready screen, use the control panel buttons to select an icon in the status bar at the top of the screen to view printer or connection information.

1. Press any arrow key to select one of the icons in the status bar at the top of the Ready screen.

2. Press . A list of basic printer or connection information appears.

3. Press or to scroll through the list.

   (Optional) Press or to view information for one of the other icons.

4. Press or to return to the Ready screen.
About the Main Menu

In the printer Ready screen, press 🖤 to view the Main Menu.

Press ▼ and ▲ to highlight Main Menu items, and then press ◼️ to select that item:

- Select Programs to see a list of programs installed on the printer. This list includes utility programs provided as part of the printer firmware, and programs you have installed on the printer.

  The Programs item appears in the Main Menu only if the printer is using Fingerprint or Direct Protocol as the command language.

- Select Settings to view and change printer settings.
- Select Tools to print test labels, manage a connected USB storage device, restore printer default settings, or save and load printer profiles.
- Select Wizards to see a list of wizards that help you configure printing or communication settings, or calibrate the media sensors.

**Note:** The printer cannot print while the Main Menu is on the screen. You need to exit the Main Menu and return to the Ready screen to begin printing.
Navigate in the Main Menu

Use the navigation buttons to select menus and menu items.

In the Main Menu:
• Press ➕ to toggle between the Main Menu and the Ready screen.
• Press ➖ to return to the Ready screen.

In the Programs, Settings, Tools, or Wizards menus:
• Press ⇧ and ⇨ to change the item in the list, and then press ◀ (the center of the directional pad) to select the item. Another menu or a list of items appears.
• Press ◀ to return to the previous screen or menu.
• Press ➖ to return to the Ready screen.

In any list of items, press ⇧ or ⇧ to select another item in the list, and then press ◀.
• If the item you selected requires you to select an option from a preset list, press ◄ or ► to scroll through the list items.
• If the item you selected requires alphabetic or numeric input, such as Network Name, press ◀ and use the alphanumeric or numeric keypad on the screen to type a value.
• If you changed the value for an item, press ◀ to save your changes. A “Saving...” message briefly appears to confirm that your changes have been saved.
• Press ◀ to return to the previous screen. If you made changes without saving them, you are prompted to save your changes:
  • Select Yes to save your changes and return to the previous screen.
  • Select No to abandon your changes and return to the previous screen.
  • Select Cancel to abandon your changes and remain on the current screen.
About the Onscreen Keypads

When you are changing settings, you may need to use the alphanumeric or numeric keypads on the screen.

**Alphanumeric Keypad - Alphabetic Characters**

**Alphanumeric Keypad - Numeric Characters and Punctuation**

**Numeric Keypad**
Chapter 1 — About the Printers

For either keypad:

- Press ▲, ■, ◄, or ► to select a character, and then press ▪ to enter that character.
- Press □ to delete the last character you entered.

For the alphanumeric keypad only:

- Select 123 or ABC and then press ▪ to toggle between the alphabetic and numeric keys.
- In the alphabetic keypad, select ▲ and then press ▪ to toggle between uppercase and lowercase letters.
- In the numeric keypad, select ▲ and then press ▪ to toggle between shifted and unshifted key characters. For example, do this to toggle between $ and # in the numeric keypad.

When you are finished typing characters, press ◄ to return to the list of items.

About the Printer Wizards

The printer firmware includes several wizards you can use to quickly set up printing and communications. You can start the wizards from the Main Menu.

Chapter 1 – About the Printers

Use a Wizard

The available wizards depend on the hardware you have installed in the printer.

1. From the Ready screen, press 📶. The Main Menu appears.
2. Select Wizards and press 📶.
3. Select a category and press 📶.
4. Select a wizard from the list and press 📶. The wizard begins.
5. In a wizard:
   • Use ↑ or ↓ to select items in a list.
   • Press 📶 to select the highlighted item.
   • Select ← and press 📶 to continue to the next screen.

About Printer Command Languages

A printer command language is a set of instructions that controls printer functions:
• Configure the printer.
• Return the status of the printer.
• Control peripheral devices.
• Format a label or receipt for printing.

The printer supports these command languages and language simulator support options:
• Fingerprint
• Direct Protocol (DP)
• IPL (Intermec Printer Language)
• ZSim (ZPL command language simulator)
• DSim (DPL command language simulator)
• Smart Printing
About Fingerprint

Fingerprint is a BASIC-inspired general purpose printer language. Use Fingerprint to design custom label formats and write printer application software. If you plan to run Smart Printing applications directly on the printer, without connecting to a PC, select Fingerprint as your printer command language. For more information, see the Intermec Fingerprint Command Reference Manual.

The printer uses the Fingerprint printer command language by default.

About Direct Protocol

Direct Protocol (DP) is a subset of Fingerprint that uses a more intuitive English-like syntax. This flexible host-based printer command language can also be used with Smart Printing applications. Direct Protocol lets you combine predefined layouts and variable data to create labels, tickets, and tags. If you are using bar code software, like BarTender, select Direct Protocol as your printer command language.

About IPL

IPL (Intermec Printer Language) is a host-based printer command language. Use IPL to design, modify, and download label formats; write printer application software; and configure the printer. If you are sending IPL label files to the printer, select IPL as your printer command language. For more information, see the IPL Command Reference Manual.

About ESim

ESim (EPL command language simulator) interprets Eltron® programs without requiring any host programming changes. If you are sending EPL label files to the printer, select ESim as your printer command language. For more information, see the ESim Command Reference Manual.
Chapter 1 – About the Printers

About ZSim

ZSim (ZPL command language simulator) interprets Zebra™ programs (ZPL II or later) without requiring any host programming changes. If you are sending ZPL label files to the printer, select ZSim as your printer command language. For more information, see the ZSim Command Reference Manual.

About DSim

DSim (DPL command language simulator) interprets Datamax™ data streams without requiring any host programming changes. If you are sending DPL label files to the printer, select DSim as your printer command language. For more information, see the DSim Command Reference Manual.

About Smart Printing

Smart Printing refers to the ability of the printer to independently run printing operations without being connected to a host computer. If you are running printer-based applications written in C#, select Smart Printing as your printer command language.

For help creating Smart Print applications, go to the Intermec Developer Center at www.intermec.com/developer.

About ESim/ZSim Auto-Configuration

Use the ESim/ZSim auto-configuration feature when you are replacing another printer whose command language is unknown.

When the printer command language is set to ESim/ZSim, on its first run the printer automatically calibrates the media, identifies the command language of the first incoming print job, configures the printer for the appropriate language (ESim or ZSim), and prints the label.

**Note:** Load media before you turn the printer on, since the printer automatically calibrates the media when it starts in ESim/ZSim auto-configuration mode.

The data stream must be at least 10 bytes long. Command language identification is activated after a 2-second timeout, or when the data buffer is full (1 MB).
The printer command language is saved to memory, and remains set to ESim/ZSim until you change this setting.

**How to Set the Printer Command Language**

You can use one of these methods to change the printer command language:

- Printer web page
- Main Menu
- PrintSet 5. For more information, see the PrintSet 5 online help.

**Set the Command Language from the Printer Web Page**

To set the command language from the printer web page, you need to turn on the printer and connect to your Ethernet or Wi-Fi network.

1. Make sure that the printer has media and ribbon (if necessary) installed.
2. On your PC, open a browser.
3. In the **Location** or **Address** bar, type the printer IP address and press **Enter**. The printer web page appears.
4. Click **Login**. The Login page appears.
5. Type your **Username** and **Password** and click **Login**. The default username is `itadmin` and the default password is `pass`.
6. Click the **Configure** tab.
7. Click **System Settings > General**.
8. Select a different printer command language from the **Command Language** list, and then click **Save**.
9. Click the **Services** tab.
10. Click **Reboot Printer**, and then click **Reboot**. The printer restarts in the command language you selected.
Set the Command Language from the Main Menu

If you have an LCD printer, you can change the printer command language from the Main Menu.

1. Make sure that the printer has media and ribbon (if necessary) installed.
2. From the Ready screen, press \text{\textcolor{magenta}{Menu}}. The Main Menu appears.
3. In the Main Menu, select \text{\textcolor{magenta}{Settings > System Settings > General}}.
4. In the \text{\textcolor{magenta}{General}} settings list, press \text{\textcolor{magenta}{Down}} to scroll to \text{\textcolor{magenta}{Command Language}}.
5. Press \text{\textcolor{magenta}{Right}} or \text{\textcolor{magenta}{Left}} to select a different command language.
6. Press \text{\textcolor{magenta}{Enter}}.
7. Press \text{\textcolor{magenta}{Menu}} to save your changes.

If you are prompted to enter a password for DSim or ZSim, the password is 1138. To return to the Fingerprint menu system from DSim or ZSim, the password is 8311.

Set the Command Language with the Print Button

If you have an icon printer, you can use the Print button to set the printer command language.

1. Make sure that the printer has media and ribbon (if necessary) installed.
2. Turn off the printer.
3. Turn the printer back on. All the LEDs light up. As the printer starts up, the LEDs turn off one by one, starting with the bottom right LED.
4. When the last two LEDs (Maintenance and Bluetooth) are lit, press and hold \text{\textcolor{magenta}{Menu}}. The printer feeds a few labels as it automatically adjusts the media feed, and then the test labels start to print.
5. Continue to hold \text{\textcolor{magenta}{Menu}}. The available printer command languages start to print.
Chapter 1 — About the Printers

6 When you see the language you want to use, release .

7 The printer automatically reboots and starts in the command language you selected.

Printer Options and Accessories

You can use these printer options and accessories (sold and ordered separately) with the PD43 and PD43c printers. Most options are either installed at the factory or can be installed by factory service technicians in the field. Accessories are designed to be installed by the customer.

Note: Some printer configurations do not support all accessories. For more information, contact your local sales representative.

This chapter explains how to load media and ribbon, print test labels, and adjust the print quality.
About Media

The printers can print on labels, tickets, tags, and continuous stock. The procedure you use to load media depends on how you are operating the printer and the options you have installed.

About Linerless Media

If you are printing on linerless media, follow these guidelines for best results:

- You must install the linerless roller accessory before printing. For more information on this accessory, contact your local sales representative.
- When removing printed labels on linerless media, tear the label up towards the top of the printer to prevent media jams.
- Do not use linerless media with the cutter accessory.

About Tag Media

If you are printing on tag media, follow these guidelines for best results:

- Install the optional thick media springs before printing. For more information on this accessory, contact your local sales representative.
- After you install the thick media springs, adjust the Media Sensitivity and Darkness settings for best print quality.
- To extend the life of the printhead, Intermec recommends that you install the original springs when printing on other types of media.

About Tear-Off Printing

In tear-off printing, you manually tear printed labels, tickets, wristbands, and other printed media from the front of the printer. After you load media, you need to configure the feed adjust settings. These settings allow for printing from the top edge of the label. You may need to adjust the recommended values slightly depending on your media type, supply method, and roll sizes, or because of individual differences between printers.
**Note:** Feed adjust values for simulator command languages like ESim, ZSim, and DSim are preset.

### Recommended Feed Adjust Values for Tear-Off Printing

**Load Media for Tear-Off Printing**

Depending on the type of media you use, you may also need to install a printer accessory. If you need to print on tag media, Intermec recommends installing the optional thick media springs before printing. If you need to print on linerless media, you must install the linerless media roller accessory before printing.

**Note:** When removing printed labels on linerless media, tear the label up towards the top of the printer to prevent media jams.

1. Open the top of the printer first and then open the media compartment door.
2 If there is an empty media core in the media compartment, remove and discard the core.

3 Place the media between the guides on the media bar. If necessary, slide the guides apart to adjust for the media width.

4 Slide the guides to the sides of the media roll. The guides move together automatically to center the roll on the media bar.
If you are using media stored outside the printer, feed the media through the external media feed slot.

5 Press the release button and raise the print mechanism.
6 Slide the media below the sensor bar and between the media guides.

7 If necessary, adjust the label stop sensor to line up with the marks on the media.

8 Slide the guides to the side edges of the media.

9 Press the print mechanism down to lock it in place.

10 Close the media compartment door and then close the top of the printer.
11 Press the **Print** button to advance the media.

If you have not yet calibrated the media feed, press and hold the **Print** button. The printer feeds one label and then prints a media configuration test label. If you are using small labels, the printer may feed more than one before printing the configuration label.

12 Configure the feed adjust settings.

### About Cut-Off Printing

In cut-off printing, each label is automatically cut from the media roll immediately after the label is printed. You can print on non-adhesive, continuous label stock. You can also use self-adhesive labels with a liner, but you must cut only the liner.

**Caution:** You must not use the cutter to cut through any kind of adhesive, or other soft material, that may stick to the cutting parts and render the cutter inoperable or even damage the electric motor.

The cutter module includes the top of form sensor. You can also install the optional cutter tray accessory, which holds up to 20 labels or tickets.

After you load media, you need to configure the cutter and the feed adjust settings. You may need to adjust the recommended values slightly depending on your media type, supply method, and roll sizes, or because of individual differences between printers.

### Recommended Feed Adjust Values for Cut-Off Printing

Load Media for Cut-Off Printing

Cut-off printing is supported when the optional media cutter accessory is installed in the printer.

1. Open the top of the printer first and then open the media compartment door.

2. If there is an empty media core in the media compartment, remove and discard the core.

3. Place the media between the guides on the media bar. If necessary, slide the guides apart to adjust for the media width.
4 Slide the guides to the sides of the media roll. The guides move together automatically to center the roll on the media bar.

If you are using large rolls of media stored outside the printer, such as in an external media holder, feed the media through the external media feed slot.
Chapter 2 — Set Up the Printer

5 Press the release button and raise the print mechanism.

6 Slide the media below the sensor bar and between the media guides.
7 If necessary, adjust the label stop sensor to line up with the marks on the media.

8 Slide the guides to the side edges of the media.

9 Slide the media through the cutter.

10 Press the print mechanism down to lock it in place.

11 Close the media compartment door and then close the top of the printer.

12 Turn the printer on and configure the cutter:
   • If you have an icon printer, use PrintSet 5 to configure the cutter. If you already know the printer IP address, you can configure the cutter using the printer web page.
   • If you have an LCD printer, continue with the next step.

13 After the printer finishes starting up, press .

14 Select Settings > Printing > Cutter.

15 In the Cutter Control options, select Automatic.

16 Press or . A “Save Changes?” message appears.

17 Press to save your changes and exit the Settings menu.

18 Configure the feed adjust settings.
Chapter 2 — Set Up the Printer

About the Label Dispenser

The label dispenser accessory, which includes the Label Taken Sensor, removes the liner from self-adhesive label stock as each label is printed. You manually remove the label at the front of the printer.

After you load media, you need to configure the feed adjust settings. You may need to adjust the recommended values slightly depending on your media type, supply method, and roll sizes, or because of individual differences between printers.

Recommended Feed Adjust Values for the Label Dispenser

</tbody>
</table>

Note: Some media types will not work successfully with the label dispenser. For best results, use media types with high label stiffness and low liner release force. High heat and high temperature can degrade media performance when used with the label dispenser.

Load Media for the Label Dispenser

To use the label dispenser accessory for printing, you print labels on self-adhesive label stock with a liner. As each label is printed, the label is automatically peeled from the liner and is presented at the front of the printer for manual removal.

The label dispenser includes a label taken sensor. After you load media, perform a test feed or calibrate the sensor before you begin printing.

Note: Some media types will not work successfully with the label dispenser. For best results, use media types with high label stiffness and low liner release force. High heat and high temperature can degrade media performance when used with the label dispenser.
1 Open the top of the printer first and then open the media compartment door.

2 If there is an empty media core in the media compartment, remove and discard the core.

3 Place the media between the guides on the media bar. If necessary, slide the guides apart to adjust for the media width.
Chapter 2 — Set Up the Printer

4 Slide the guides to the sides of the media roll. The guides move together automatically to center the roll on the media bar.

If you are using media stored outside the printer, feed the media through the external media feed slot.
5 Press the release button and raise the print mechanism.

6 Slide the media below the sensor bar and between the media guides.
7 If necessary, adjust the label stop sensor to line up with the marks or gaps on the media.

8 Slide the guides to the side edges of the media.

9 Press the side buttons on the label dispenser to open the front door.

10 Remove the label closest to the end of the liner.
11 Route the liner through the slot in the front door of the label dispenser. Do not pull on the media to take up the slack. The liner should be over the roller in the printer and under the roller in the front door of the label dispenser.

12 Close the label dispenser front door.

13 Press the print mechanism down to lock it in place.

14 Close the media compartment door and then close the top of the printer.

15 Press and hold $\text{Print}$ for two seconds to begin a test feed. The printer dispenses two labels at the front of the printer as it calibrates the media feed.

16 If necessary, adjust media settings. You can also use the Main Menu wizards to help calibrate the media feed and the label taken sensor.

In the Main Menu, select Wizards > Calibration and then select Media or Label Taken Sensor.
Load External Media for the PD43

To use large rolls of media or tag stock, you can load the media from outside the printer.

1. Place the media behind the printer and feed the media into the printer through the external media feed slot.

2. Thread the media through the media guides as you would for media installed inside the printer.
Set the PD43c Rear Feed Guides

Note: This section applies to the PD43c printer with the rear feed guides option installed.

If you use the same media width all the time in the PD43c printer, you can lock the rear feed guides in place to make loading media easier. To lock the feed guides in place, you need a #1 Phillips screwdriver.

1. Open the printer lid.
2. Slide the feed guides to adjust them to the width of your media.
3. Tighten the adjustment screw in the center of the guide plate to lock the guides in place. Do not overtighten.

4. If necessary, adjust the printer media guides to the width of your media.

5. If necessary, press the release button to raise the print mechanism, and adjust the label stop sensor.
Load External Media Rolls for the PD43c

If you have the external media roll holder for the PD43c, follow this procedure to load media rolls on the holder.

1 Place the media on the bar between the guides, and then slide the guides to the sides of the media roll.

2 Slide the media into the external media feed slot.

3 Thread the media through the printer as usual.
Load Boarding Passes for the PD43c

If you have the ticket shelf accessory, follow this procedure to load boarding pass media for the PD43c printer.

1 Place the media in the ticket shelf.

2 Feed the media over the top guide of the ticket shelf and into the printer external media feed slot.

3 Thread the media through the printer as usual.
Load Airline Media

If your PD43c printer includes the optional rear feed guides, follow this procedure to load media for airline use such as bag tags or boarding passes.

1. Position the media at the rear of the printer.

   If you have the optional boarding pass ticket shelf, place the media on the shelf and feed it over the top of the guide into the printer.

   If you have the optional external media holder, place the media on the bar between the guides, and then slide the guides to the sides of the roll to hold it in place.
2 Adjust the feed guides by sliding the guides to match the width of your media.

3 Slide the media into the printer.

4 If this is the first time you have used this media width, open the printer top and slide the media guides to match the media width. You do not need to raise the print mechanism to adjust the guides.

5 Thread the media all the way through the printer as usual.

6 Close the printer top and press the Feed button.
Chapter 2 — Set Up the Printer

Adjust the Label Stop Sensor

For best performance, adjust the label stop sensor to line up with the black marks on your media.

1. Open the top of the printer.
2. Press the release button and raise the print mechanism.

3. Slide the label stop sensor to line up with the black marks on your media.
About Ribbon

Thermal transfer printing provides a durable printout that is less vulnerable to chemicals, heat, and sunlight than direct thermal printing. Make sure you select a ribbon type that matches the media you are using and that you configure the printer for thermal transfer media.

The printer supports thermal transfer ribbon rolls with the ink-coated side facing either inward or outward. To determine which type of ribbon you have, use a pen or other sharp object to scratch through the ribbon against a piece of paper. If you see a mark on the paper, your ribbon is wound ink out.

Determining Whether Your Ribbon is Wound Ink In or Ink Out
Load Ribbon

1. Open the top of the printer and the media compartment door.

2. Press the release button and raise the printhead.

   By default, the printer is set to “ink out” operation when you use ribbon. To change the printer to “ink in” operation, use a ballpoint pen or other tool to slide the ink direction switch towards the rear of the printer.

3. If there is an empty ribbon core in the media supply position, remove the core and set it aside.

4. Remove and discard the full ribbon takeup core.
5 Place the new ribbon roll between the rear ribbon holders.

- For “ink out” operation (default), the ribbon should come off the back of the roll.
- For “ink in” operation, the ribbon should come off the front of the roll.

6 Place the takeup core between the front takeup core holders.
Chapter 2 — Set Up the Printer

7 Press the release button and raise the print mechanism.

8 Route the ribbon under the print mechanism and up to the takeup core.

9 Press the printhead down to lock it in place.
10 Attach the end of the ribbon to the takeup core and turn the slack-wheel to take up slack in the ribbon.

11 Close the media door and the top of the printer.

12 If you have already configured the printer for thermal transfer printing, continue with the next step. Otherwise, from the printer Main Menu, select **Settings > Printing > Media > Print Method > Ribbon (TTR)**.

   For an icon printer, you must use the printer web page or Intermec PrintSet 5 to configure print settings. You can also hold the **Print** button as the printer starts up to automatically calibrate the media and ribbon feed, and print test labels.

13 Save your changes.
Chapter 2 — Set Up the Printer

Change the Ink Direction

By default, the printer is set to “ink out” operation. Follow this procedure to set the printer to “ink in” operation.

1. Open the top of the printer.
2. Open the media compartment door.
3. Press the release button and raise the print mechanism. The ink direction switch is located under the print mechanism.

By default, the printer is set to “ink out” operation when you use ribbon. To set the printer to “ink in” operation, use a ballpoint pen or other tool to slide the ink direction switch towards the rear of the printer.

To set the printer to “ink out” operation, slide the ink direction switch towards the front of the printer.
Use the Notchless Ribbon Core Adapter

Use the optional ribbon core adapter to load media without notches in the core. The ribbon core adapter is sold separately. For information on purchasing this accessory, contact your local sales representative.

1 Insert one adapter into the media core and one adapter into the takeup core.

2 Center the media roll and takeup core on the adapter.

3 Press the release button and raise the print mechanism.
Chapter 2 – Set Up the Printer

4 Place the ribbon roll and adapter into the rear media holders.

- For “ink out” operation (default), the ribbon should come off the back of the roll.
- For “ink in” operation, the ribbon should come off the front of the roll.

5 Place the takeup core and adapter between the front media holders.

6 Route the ribbon under the print mechanism and up to the takeup core.
7 Attach the ribbon to the takeup core.

8 Turn the slack-wheel to take up slack in the ribbon.
Connect the Printer to Power

The PD43 printer connects directly to AC power. The PD43c uses an external AC adapter.

Caution: Use only the AC power adapter supplied with the printer. The use of a power adapter not approved by Intermec voids the product warranty and may damage the printer.

1 For the PD43, connect the AC power cable from the printer to an AC power source.
For the PD43c:

a Connect the AC power adapter to the power connector on the printer.

b Connect the power adapter to AC power. When the adapter is connected to AC power, the green LED in the adapter connector turns on and stays on.

2 Press the power switch to turn the printer on. As the printer starts up:

- a progress bar appears on the LCD printer screen. When the printer has finished starting up, the Ready screen appears, and the blue Ready-to-Work™ indicator turns on and stays on.
- the icons turn on and then turn off one at a time on the icon panel. When the printer has finished starting up, the blue Ready-to-Work indicator turns on and stays on.

If a condition occurs that will prevent printing, the Ready-to-Work light blinks.
Use the Setup Wizard

This section explains how to use the Setup Wizard to configure the LCD printer. You must configure the printer this way after turning it on for the first time, after upgrading the firmware, or after resetting all defaults.

1. Connect the printer to power and press the Power switch. When the printer is ready, the Setup Wizard starts.

2. Select the settings you want from the menus in the Setup Wizard.
   - Use ↑ or ↓ to select different items in a list.
   - If the item you selected requires you to select an option from a preset list, press ◀ or → to scroll through the list items.
   - Press □ to select a highlighted item.
   - Select ← and press □ to continue to the next screen.

How to Set Up an Icon Printer

If your printer has the icon front panel, follow these guidelines for connecting and setting up the printer. The way you set up an icon printer depends on whether you plan to connect the printer to your network or to a single PC.

If your network automatically assigns communications parameters (such as IP addresses) to devices, you can set up the printer through the printer web page. The printer web page allows you to configure all settings, print test labels, and perform other management and setup tasks.

If your network does not automatically assign communications parameters to devices, or if you plan to connect the printer to a single PC, you must use the PrintSet 5 application to set up the printer.
Set Up an Icon Printer without a Network Option

Follow this procedure to set up an icon printer that does not have the Ethernet or Wi-Fi network options. You configure printer settings through the Windows print driver.

Note: Before you begin, use InterDriver to install the driver for the printer on your desktop PC.

1. Make sure the printer is turned on and connected to your desktop PC with a USB cable.

2. On your desktop PC, select Start > Devices and Printers.

3. In the Printers and Faxes section, right-click the printer and select Printing preferences.

You can change printer settings in the Printing Preferences dialog box. For more information on the Windows print driver settings, click Help.
Chapter 2 — Set Up the Printer

Set Up an Icon Printer with Ethernet

If your icon printer includes the Ethernet network option, follow this procedure to obtain the printer IP address and configure settings through the web page interface.

**Note:** Before you begin, use InterDriver to install the driver for the printer on your desktop PC.

1. Connect the printer to your Ethernet network and turn the printer on. Wait until all the icons turn off.
2. Press and hold the **Feed** button. The printer feeds one label. When the printer starts feeding a second label, release the **Feed** button. The printer prints two configuration labels.
3. Find the IP address on the second configuration label.
4. On your desktop PC, open a web browser and browse to the IP address. The printer web page appears.
   You can configure printer settings through the web page interface.

Set Up an Icon Printer with Wi-Fi

If your icon printer includes the Wi-Fi network option, follow this procedure to enable Wi-Fi communications, obtain the printer IP address and configure settings through the web page interface.

**Note:** Before you begin, use InterDriver to install the driver for the printer on your desktop PC.

1. Make sure the printer is turned on and connected to your desktop PC through a USB cable.
2. On your desktop PC, start PrintSet 5 and use the application to determine the printer IP address.
   For help, see the PrintSet online help.
3. Open a web browser and browse to the IP address. The printer web page appears.
   You can configure printer settings using the web page interface.
Chapter 2 — Set Up the Printer

Calibrate the Media Feed and Print Test Labels on the Icon Printer

For the icon printer, follow this procedure to automatically calibrate the media feed and print test labels.

1. Make sure that the printer has media and ribbon (if necessary) installed.
2. Turn off the printer.
3. Turn the printer back on. All the LEDs light up. As the printer starts up, the LEDs turn off one by one, starting with the bottom right LED.
4. When the last two LEDs (Maintenance and Bluetooth) are lit, press and hold \( \text{Print} \). The printer feeds a few labels as it automatically adjusts the media feed, and then prints two test labels with media and communications settings.

Set the Command Language with the Print Button

If you have an icon printer, you can use the Print button to set the printer command language.

1. Make sure that the printer has media and ribbon (if necessary) installed.
2. Turn off the printer.
3. Turn the printer back on. All the LEDs light up. As the printer starts up, the LEDs turn off one by one, starting with the bottom right LED.
4. When the last two LEDs (Maintenance and Bluetooth) are lit, press and hold \( \text{Print} \). The printer feeds a few labels as it automatically adjusts the media feed, and then the test labels start to print.
5. Continue to hold \( \text{Print} \). The available printer command languages start to print.
6. When you see the language you want to use, release \( \text{Print} \).
7. The printer automatically reboots and starts in the command language you selected.
Calibrate the Label Taken Sensor

If your printer has the optional label taken sensor or the label dispenser (which includes the sensor), use the wizard to calibrate the sensor for your media.

**Note:** For best results, calibrate the sensor each time you load media or move the printer to a different environment. If you installed the label taken sensor module or the label dispenser in the printer, calibrate the sensor before you begin printing.

*Label Taken Sensor Location (with Label Dispenser)*
Before you calibrate the sensor, load media and ribbon in the printer as necessary.

1 In the Main Menu, select Wizards > Calibration > Label Taken Sensor.

2 Follow the prompts to calibrate the sensor.

**About Test Labels**

You can print a test label to check print quality and get configuration information, including lists of the fonts, images, and applications installed on the printer. Use one of these methods to print a test label:

- In Start Up mode
- In Idle mode
- From the Main Menu
- From PrintSet 5

You can also print test labels from the printer web page, which requires a network connection to a desktop PC. You need to know the printer IP address to view the printer web page.

**Print a Test Label in Start Up Mode**

You can print a test label when you first turn on the printer.

1 Make sure that the printer has media and ribbon (if necessary) installed.

2 Connect the printer to power and turn on the printer.

3 On the icon printer, when the last two LEDs are lit (Maintenance and Bluetooth), press and hold until the test label starts to print.

On the LCD printer, when the status bar appears, press and hold until the Media Calibration Wizard appears. Select and press to print a label with the current print settings.
Chapter 2 — Set Up the Printer

Print a Test Label in Idle Mode

You can print a test label when the printer is in Idle mode.

1. Make sure that the printer has media and ribbon (if necessary) installed.

2. On the icon printer, press and hold \( \text{ until the test label starts to print.} \)

   On the LCD printer, press and hold \( \text{ until the Media Calibration Wizard appears. To print a label with the current print settings, select } \) and press .

Print a Test Label from the Main Menu

If you have an LCD printer, you can print a test label from the Main Menu.

1. Make sure that the printer has media and ribbon (if necessary) installed.

2. From the Ready screen, press .

3. Press \( \text{ to select } \text{ and then press } . \) The Tools menu appears with \( \text{ selected.} \)

4. Press .

   ![Test Labels Menu]

5. Select \( \text{ or } \text{, and then press } . \) A list of available labels appears.

6. Select a label to print, and then press .
Pause or Cancel a Batch Print Job on the LCD Printer

During a batch print job, a Pause button appears on the LCD printer screen:

You can pause a batch print job by pressing the **Print** button. You can also cancel a batch print job from the front panel.

1. During a batch print job, press 🔄. The printer stops printing and these icons appear:

2. To resume printing, press 🔄.

   To cancel printing, press ↳ to select ❌, and then press �西红. The print job is cancelled.

   To view information, press ▲ to select a status icon, and then press 🟥.
Pause a Batch Print Job on the Icon Printer

During a batch print job, press \[\text{Pause} \] to pause the print job. When a print job is paused, the Pause icon flashes.

Press \[\text{Resume} \] to resume printing.

Cancel a Batch Print Job on the Icon Printer

There are several ways to cancel a batch print job that you sent to an icon printer:

- Cancel the job from the Windows print spooler on the PC.
- Depending on the printer command language you are using, you may be able to send a “cancel job” command to the printer. For more information, see the command information for your printer language.
- Turn off power to the printer.
How to Print on RFID Media

If you have an LCD printer with the optional RFID module installed, you can print on RFID media. Media containing RFID tags is slightly thicker where the RFID tag is located. The slight thickness of this part of the label may affect print quality. For thermal transfer labels, Intermec recommends using high-quality ink ribbon.

To achieve the best possible print quality, follow these guidelines:

• Run the RFID calibration wizard to determine the best Tag Position and Output Power for RFID media.
• If necessary, modify the Tag Position (TAGADJUST variable) to make sure the RFID labels are properly aligned with the antenna.
• Avoid printing on the thickest part of the label when possible.

For help configuring RFID parameters, see the Intermec Fingerprint Command Reference Manual or the IPL Command Reference Manual.

About RFID Tag Position

Tag Position, also referred to as TAGADJUST, specifies the distance (in dots/mm/in) to move the label to align the tag with the RFID antenna. Positive values move the label forward, and negative values move the label back.

Use one of these methods to calculate Tag Position:

• Run the RFID wizard.
• Manually calculate the Tag Position.
Run the RFID Calibration Wizard

Run the RFID calibration wizard to determine the best Tag Position and Output Power (UHF inlays, only) for RFID media.

**Note:** After you determine the correct RFID media settings, you can save these settings to a printer profile and load the profile when you need to print on the specific RFID media.

1. Make sure the media type and media length are properly configured.
2. From the Main Menu, select **Wizard > Calibration > RFID Calibration**.
3. To enable the RFID module, select **Enable**.
4. Load the RFID media.
5. Select **OK**.

When the calibration is complete, the printer displays the RFID Tag Position and Output Power (UHF inlays, only).
Calculate RFID Tag Position

You can perform a manual calculation to come up with an estimate of the RFID Tag Position. Because this value is an estimate, you may need to slightly adjust the calculated value to achieve the best results.

1. Make sure Start Adjust and Stop Adjust are set to 0.
2. Measure the yChip value, which is the distance between the RFID chip and the media edge aligned with the tear bar.

3. Note the yAntDist value for your printer:
   - UHF RFID: 277 dots, 34.6 mm, 1.362 in
   - HF RFID: 293 dots, 36.6 mm, 1.441 in

4. Use this formula to calculate the estimated Tag Position:
   \[ \text{TagPosition} = \text{yChip} - \text{yAntDist} \]
This chapter explains how to connect the PD43 printers to a PC and to an Ethernet or wireless network.
Chapter 3 — Connect the Printer

About Printer Drivers

Before you can use the printer with Microsoft Windows printing applications, you need to install printer driver software on the PC. Drivers enable the printer to communicate with your PC and with software applications such as Honeywell PrintSet 5.

Note: Although Windows may auto-detect the printer when you connect it to a PC through a USB port, you must still install printer drivers on the PC for correct printer operation.

Install Printer Drivers

Use InterDriver to install printer driver software on your PC. InterDriver is included on the PrinterCompanion CD that shipped with your printer. If you have not yet installed drivers on your PC, run the PrinterCompanion CD and follow the instructions to connect your printer and install the drivers.

If you do not have access to the PrinterCompanion CD but you still need to install driver software, follow this procedure to download InterDriver from the Intermec website and install the drivers.

1 Open a web browser and go to www.intermec.com.
2 Select Support > Downloads.
3 Select these items:
   a In the Product Category list, select Printers.
   b In the Product Family list, select Fixed Printer.
   c In the Product list, select PD43, PD43c Commercial Printer and then click Submit.

4 In the downloads page, click Intermec InterDriver X.X.X M-X ver. X.XX. If a Security Warning dialog box appears, click Run.

5 When asked if you want the program to make changes to your computer, click Yes.

6 Follow the onscreen instructions in the InterDriver InstallShield wizard.
7 When you reach the InstallShield Wizard Complete page, click Next. The InterDriver Wizard appears.

8 From the Welcome to InterDriver Wizard page, make sure Install printer drivers is selected and then click Next.

9 Follow the onscreen instructions in the InterDriver Wizard.

10 When you reach the Completing the InterDriver Wizard page, click Finish.

11 When the InterDriver Wizard Completed Successfully page appears, click Next.

12 Follow the onscreen instructions to complete the Post-Setup Tasks.

13 When the Installation Complete! page appears, click Finish.

The installer unpacks and installs the InterDriver files in the Intermec\InterDriver folder in your program files directory and creates two shortcuts in the Windows Start menu:

- Intermec > InterDriver > InterDriver Wizard
- Intermec > InterDriver > Check for Updates

### How to Connect the Printer to Your PC

You can connect the printer to your PC using one of these cables:

- USB cable
- USB-to-Serial adapter cable
- USB-to-Parallel adapter cable

### Connect the Printer Using a USB Cable

The printer supports USB connections to a desktop PC. You do not need to set up any parameters for USB communications.

**Note:** You must install InterDriver to use a USB connection to a Windows PC. For more information, see the PrinterCompanion CD that came with your printer.

1 Download and install the InterDriver software on your PC.
2 Connect one end of the USB cable to the USB device port on the back of the printer, and connect the other end to your PC. A “USB Host Connected” message appears on the printer screen.

For the PD43, use the cable guides on the underside of the printer for cable strain relief.
Connect the Printer Using a Serial or Parallel Cable

If you have the optional USB-to-Serial adapter cable or USB-to-Parallel adapter cable for the printer, you can connect the printer to the serial or parallel port on a PC.

1. Connect the adapter cable to the USB host port on the printer.

For the PD43 printer, use the cable guides on the underside of the printer for cable strain relief.
Chapter 3 — Connect the Printer

2 For a USB-to-Serial adapter, connect the adapter cable to the serial port on your PC. Continue with the next step.

For a USB-to-Parallel adapter, connect the adapter cable to the parallel port on your PC. The printer is ready to communicate with your PC.

3 If you are using an LCD printer, from the printer Main Menu select Settings > Communications > Serial and change settings as necessary.

If you are using an icon printer, you need to configure settings through an application such as PrintSet 5.

How to Connect the Printer to Your Network

You can connect the printer to your network using the:

• Ethernet interface.
• Wi-Fi + Bluetooth wireless interface.

These network interfaces provide features such as security, FTP server, web page, and Alert handling.

Connect the Printer to an Ethernet Network

If your printer has an Ethernet module, you can connect it to your wired network.

By default, the printer supports DHCP networks. If you are not using a DHCP network, you need to configure wired Ethernet settings by using Intermec PrintSet 5 through a USB connection to the printer.
1 Connect an Ethernet cable to the Ethernet port on the rear of the printer and to your network.

For the PD43, use the cable guides on the underside of the printer for cable strain relief.
Chapter 3 — Connect the Printer

2 Get the IP address for your printer:
   • For an LCD printer, from the Main Menu select Settings > Communications > Ethernet and find the IP address.
   • For an icon printer, press and hold until the test label with the IP address starts to print.

3 Configure the necessary Ethernet settings:
   • For an LCD printer, from the Main Menu select Settings > Communications > Ethernet.
   • For an icon printer, configure the Ethernet settings through PrintSet 5 or the printer web page.

About Wi-Fi Communications

The printer supports Wi-Fi communications when the optional Wi-Fi/Bluetooth module is installed.

You can configure Wi-Fi communications:
   • by using the wireless wizard in the printer Main Menu.
   • from the printer web page. You need to know the printer IP address.
   • from the printer Main Menu if your printer has a graphical interface.

By default, the printer supports DHCP networks. If you are not using a DHCP network and you do not know the printer IP address, you need to configure Wi-Fi settings by using PrintSet 5 through a USB connection to the printer, or by sending commands through a serial connection.
Connect the Printer to a Wireless Network

Before you begin, you should be familiar with the settings you need for your network.

If you are using a DHCP network, turn the printer on. The printer automatically connects to the wireless network.

For a printer with the LCD interface, the Wi-Fi Connection icon shows the status of the connection.

![Wi-Fi Connection Icon on LCD Interface](image)

**Wi-Fi Connection Icon on LCD Interface**

For a printer with the icon interface, the Wi-Fi icon turns on to show that Wi-Fi is enabled.

![Wi-Fi Icon on Icon Interface](image)

**Wi-Fi Icon on Icon Interface**

If you are not using a DHCP network, follow the next procedure to manually assign network settings (such as the printer IP address) to a printer with the LCD interface.

**Note:** If you are using an icon printer and you do not know the printer IP address, you need to use PrintSet 5 with a USB connection to a PC to configure wireless network settings for a non-DHCP network.
1 From the printer Ready screen, press 

![](image1.png)

The Main Menu appears.

2 Select Settings > Communications > Wireless 802.11.

![](image2.png)

3 Select General to configure these wireless network settings:

- Network Name (SSID)
- Network Type
- Roaming
- Power Mode
- Channel (for Ad Hoc mode only)
- Hidden SSID

Select Network to configure these settings:

- IP Assignment Method (for IPv4 or IPv6 networks)
- IP address
- Subnet mask and default router

Select Security to configure all wireless network security settings.

4 Change settings as needed for your network.

5 When you are finished, save your changes. The printer immediately attempts to connect to your network.
Configure Wi-Fi Communications from the Printer Web Page

You can use the printer web page to configure wireless communications on the printer.

**Note:** To configure the printer from the web page, the printer must be turned on and connected to your Wi-Fi or Ethernet network.

1. On your PC, open a browser.
2. In the Location or Address bar, type the printer IP address and press Enter. The printer web page appears.
3. Click Login. The Login page appears.
4. Type your Username and Password and click Login. The default username is itadmin and the default password is pass.
5. Click the Configure tab.
6. Click Communications > Wireless 802.11. The Wireless 802.11 page appears.

![Wireless 802.11 Configuration](Image)

7. Change settings as needed, or click Default Settings to restore all default Wireless 802.11 settings.
8. Click Save when you are done.
Chapter 3 — Connect the Printer

About Bluetooth Communications

The printer supports Bluetooth communications when the optional Wi-Fi/Bluetooth module is installed. When Bluetooth is enabled, you can connect the printer to other Bluetooth devices, such as bar code scanners and keyboards. You can also make the printer discoverable by Bluetooth-enabled devices such as mobile computers.

Note: To connect to the printer from a Bluetooth-enabled mobile computer, you may need to configure Bluetooth settings on the printer before you try to discover the printer from the mobile computer.

When the Wi-Fi/Bluetooth module is installed:

• the Bluetooth icon appears in the status bar on the LCD printer screen.
• the Bluetooth icon turns on in the icon printer interface.

The icon is white when the Bluetooth connection is active, and gray when the connection is inactive or disabled.
Connect to a Bluetooth Device by Reading a Bar Code

To connect a Bluetooth-enabled bar code scanner to the printer, use the scanner to read the “Scan to Connect” bar code.

1. Make sure your printer is ready to print.
2. On your desktop PC, start a web browser.
3. In the address field, type the printer IP address and then press Enter. The printer web page appears.
4. Click Services and then select Print Test Labels > Printer Settings.
5. In the Printer Settings screen, locate the Bluetooth Settings label and click Print. The printer prints the Bluetooth Settings label.
6. Make sure your Bluetooth scanner is turned on and discoverable, and that the device is in range of the printer.
7. Use the scanner to read the “Scan to Connect” bar code on the Bluetooth Settings label. The printer attempts to connect to the scanner.

Connect to a Bluetooth Device Using a Wizard

If your printer has the LCD interface, you can also use the Bluetooth wizard to discover and connect to a Bluetooth device, such as a keyboard.

1. Make sure your Bluetooth device is turned on and discoverable, and that the device is in range of the printer.
2. From the printer Ready screen, press the Main Menu appears.
3. Select Wizards > Communications > Bluetooth.
4. Follow the instructions to discover and connect to your Bluetooth device.

If you are unable to connect to the Bluetooth device, change the printer Bluetooth settings or move the Bluetooth device closer to the printer.
Configure Bluetooth Communications from the Main Menu

This section explains how to configure Bluetooth settings from the printer Main Menu. You may need to configure these settings if you want to connect to a mobile computer through Bluetooth.

1 From the Ready screen, press 🏛. The Main Menu appears.

2 Select Settings > Communications > Bluetooth.

3 Change settings as needed for your Bluetooth device.

4 When you are finished, save your changes and restart the printer.

Configure Bluetooth Communications from the Web Page

Use this procedure to configure Bluetooth from the printer web page. The printer must be connected to an Ethernet or wireless network and you must know the printer IP address.

1 On your PC, start a browser.

2 In the Location or Address bar, type the printer IP address and press Enter. The printer web page appears.

3 Click Login. The Login page appears.

4 Type your Username and Password and then click Login. The default value for Username is itadmin and the default value for Password is pass.

5 Click the Configure tab. The Configuration Summary page appears.

6 Click Communications > Bluetooth. The Bluetooth settings page appears.

7 Change Bluetooth settings as needed. You can also click Default Settings to restore all default Bluetooth settings.

8 Click Save when you are finished.
About the USB Host Port

You can use the USB host interface port on the printer to connect these peripheral devices:

**USB Peripheral Devices**

<table>
<thead>
<tr>
<th>Device</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keyboard</td>
<td>Use a standard USB keyboard to send Fingerprint printer language commands directly to the printer or to enter information if you are running a Smart Printing application.</td>
</tr>
<tr>
<td>Bar code scanner</td>
<td>Use Intermec USB bar code scanners for data input with a Smart Printing application. The printer also supports other USB scanners that use a generic keyboard driver.</td>
</tr>
<tr>
<td>USB storage device</td>
<td>Use a USB storage device to load applications, configuration files, fonts, and images into the printer memory, or to perform firmware upgrades. You can also save configuration files to a USB storage device for upload to a printer. The USB storage device must have a single partition and be formatted as FAT16 or FAT32.</td>
</tr>
</tbody>
</table>

You can also connect a peripheral device through the USB-to-Serial or USB-to-Parallel adapter cable accessories. For information, contact your local sales representative.
Chapter 3 — Connect the Printer

Connect a USB Device

The printer has two USB host ports that you can connect a USB device to.

1. If you are connecting a USB storage device, make sure the device has a single partition and is formatted as FAT16 or FAT32.
2. Connect the device to one of the USB host ports.

3. If you connected a USB storage device to an LCD printer, select Tools > USB Menu for more options.
4

Configure the Printer

This chapter explains how to view and change printer settings by using the Main Menu or the printer web pages.
Chapter 4 — Configure the Printer

About Printer Configuration Settings

Printer configuration settings determine how the printer operates.

**Printer Configuration Settings**

<table>
<thead>
<tr>
<th>Setting Type</th>
<th>Description</th>
</tr>
</thead>
</table>
| Communications | All communications and network settings:  
  - Serial (appears when using serial connection to PC. Includes virtual COM port settings.)  
  - Ethernet (appears when Ethernet module is installed)  
  - Wireless 802.11 (appears when Wi-Fi/Bluetooth module is installed)  
  - Bluetooth (appears when Wi-Fi/Bluetooth module is installed) |
| Printing | Configuration settings for media (such as media width and length), print quality, and performance. |
| System Settings | Global system settings including printer name, location, and contact information, display and keyboard input languages, date and time, unit of measure, audio volume, and printer command language.  
  Display settings including brightness, time and date format, menu access permissions, and screen timeout.  
  Enable and disable Wi-Fi, Bluetooth, Ethernet, or virtual COM port communications.  
  Enable and disable services including Intermec SmartSystems, FTP, Telnet, and others.  
  Set maintenance alert values for the printer odometer and other alerts. |
| Network Services | Enable or disable network services including Intermec SmartSystems, the web or email servers, and others. |
Chapter 4 — Configure the Printer

How to Configure the Printer

Use one of these methods to view and change printer settings:

- Printer web page
- Main Menu (LCD printers)
- PrintSet 5
- Programming commands
- SmartSystems

View the Configuration Summary

If you are using Ethernet or Wi-Fi communications, you can view a complete summary of all printer configuration settings from the printer web page. You should have already connected your printer to your network and obtained an IP address.

Note: This process may take several minutes depending on the options in your printer and your network connection.

1. Open a web browser on your PC.
2. In the Location or Address bar, type the printer IP address, and then press Enter. The printer web page appears.
3. Click the Configure tab.
4 Click **Configuration Summary**. The configuration summary appears.

---

**Configure the Printer from the Web Page**

If you are using Ethernet or Wi-Fi communications, you can change printer configuration settings from the printer web page. You should have already connected your printer to your network and obtained an IP address.

1. Open a web browser on your PC.
2. In the **Location** or **Address** bar, type the printer IP address, and then press **Enter**. The printer web page appears.
Chapter 4 — Configure the Printer

3 Click **Login** in the upper right corner of the screen. The Login page appears.

4 Type your **Username** and **Password** in the entry fields, and then click **Login**. The default username is `itadmin` and the default password is `pass`.

5 Click **Configure**. The Configuration Summary page appears.

6 To see a complete list of printer settings, click **Configuration Summary**.

   To configure printer settings, use the links in the navigation pane:
   - For serial port, Wi-Fi, or Bluetooth settings, click **Communications**.
   - For media, print quality, or performance settings, click **Printing**.
   - For display, audio, service, and general settings, maintenance alert message triggers, or to enable and disable 802.11 and Bluetooth or the virtual COM port, click **System Settings**.
   - To set conditions that trigger error, warning, and information alert messages, click **Alerts**.
   - For network-related settings such as web and email server information, or if you are using a network management application such as Intermec SmartSystems, click **Network Services**.

7 Change settings by typing in the fields or by selecting an item from a list.

8 To save your changes on this page, click **Save**. After your changes are saved, you can click **Save As Profile** to create a configuration profile including your changes that you can load at any time.

   To reset all values and options on the page to the default settings, click **Default Settings**.
Configure the Printer from the Main Menu

If you have an LCD printer, you can view or change configuration settings from the Main Menu.

1. From the Ready Screen, press 🏠.

2. Select Settings and press 🛠. The Settings menu appears with Communications selected.

3. Select the settings you want to configure and make your changes.

4. Save your changes when prompted.

Configure the Printer with PrintSet 5

PrintSet 5 is a printer configuration tool that enables you to easily change your configuration settings. You can also use the setup wizards in PrintSet 5 to guide you through common configuration tasks.

1. Make sure that you have Windows XP or later running on your PC.

3. Connect your printer to your PC using a serial, USB, or network (Ethernet or Wi-Fi) connection.
How to Configure the Printer with Programming Commands

You can change configuration settings by sending programming commands directly from your PC to the printer through a terminal program (such as HyperTerminal), a serial connection, or a network connection.

If your printer uses the Fingerprint programming language, use the SETUP GET command followed by the node, subnode, and parameter setting. For example, here is a Fingerprint example that changes your media setting to labels with gaps:

```
SETUP GET "MEDIA, MEDIA TYPE, LABEL (W GAPS)"
```

You must log in as an itadmin to perform a SET operation, but you do not need to log in to perform a GET operation.

If your printer uses the IPL programming language, this example changes your media setting to labels with gaps:

```
<STX><SI>T1<ETX>
```

For more information on how to change configuration settings with a programming language, see either the Intermec Fingerprint Command Reference Manual or the IPL Command Reference Manual.

How to Configure the Printer with SmartSystems

You can use SmartSystems to change configuration settings on your printer. The printer ships with the SmartSystems client loaded on it. The console is part of SmartSystems and is available from the Intermec website. To download SmartSystems, go to www.intermec.com/products/smrtsysfoundation/index.aspx.
Chapter 4 — Configure the Printer

About Printer Profiles

After you change printer default settings to meet your needs, you can save those settings as a printer profile. The printer supports multiple profiles that you can save and load at any time. For example, you can create one profile to use when you are printing on continuous label stock, and a different profile to use when you are printing on label stock with gaps.

The following printer settings are not saved in a profile:

• IP address for either IPv4 or IPv6 networks
• Media calibration settings for the label stop sensor
• Remote port or remote host values for a remote computer accessing the printer through raw TCP

Save a Printer Profile from the Web Page

From the printer web page, you can save the current settings as a profile that you can load from the printer memory at any time.

Note: This procedure assumes you have already logged in to the printer web page.

1 In the printer web page, click the Configure tab.

2 Click System Settings > General.

3 Click Save As Profile. The Save As Profile screen appears.

4 Enter a name in the Profile field, and then click Save.
Load a Printer Profile from the Web Page

You can load a saved profile from the printer web page.

**Note:** This procedure assumes you have already logged in to the printer web page.

1. In the printer web page, click the **Manage** tab.
2. Click **Profiles**.

![Profile Management](image)

The **Resident** list includes profiles that are saved in the printer memory.

3. To load a profile from the printer memory, select the profile in the **Resident** list and then click **Activate**. The profile is loaded.

To load a profile from another location:

a. Click **Browse** and browse to the location of the file.
b. Double-click the file.
c. Click **Upload**. The profile is uploaded to the printer.
Manage Printer Profiles from the Web Page

You can activate and delete profiles or download profiles to your PC from the printer web page.

**Note:** This procedure assumes you have already logged in to the printer web page.

1. In the printer web page, click the **Manage** tab.
2. Click **Profiles**.

3. Select a profile from the **Resident** list. If you want to delete profiles, or if you want to download profiles to your PC, you can select more than one profile.

4. Click **Delete** to delete the profile from the printer memory.
   - Click **Download** to download the profiles to your PC.
   - Click **Activate** to load the profile.
Save a Printer Profile from the Main Menu

You can save current printer settings for an LCD printer as a printer profile and load that profile on another printer.

1. From the Ready screen, press . The Main Menu appears.
3. Select Save.
4. Select the Filename text box and type a name for the profile. The profiles can have up to sixteen characters with no spaces.
5. Press to save your profile name and go back to the Save Profile menu.
6. Press and wait until Complete appears on the screen.

Load a Printer Profile from the Main Menu

You can load a saved LCD printer profile to another printer from the Main Menu.

1. From the Ready screen, press . The Main Menu appears.
3. Select Load. In the Save Profile menu, select Filename and enter a name for the profile of up to sixteen characters (no spaces).
   To load a saved profile, select Load. In the Load Profile menu, select the profile to load.
4. Select the profile you want to load on the printer and press .
5. When Complete appears on the screen, press to return to the Main Menu.
How to Load a Printer Profile with Programming Commands

You can load a saved LCD printer profile to another printer by sending programming commands directly from your PC to the printer through a terminal program (such as HyperTerminal), a serial connection, or a network connection. All commands are case-sensitive.

**Note:** To load printer profiles that modify communication settings that require itadmin rights, you must log in as an itadmin: RUN “su -p pass itadmin”.

### Programming Commands to Load a Printer Profile

<tr>
<td>Telnet connection over Port 23</td>
<td>/system/usr/bin/cfg -o xmlimportset -k /home/user/profiles/myprofile</td>
</tr>
</tbody>
</table>

### About USB Storage Device Directories

You can use a USB storage device to install files, such as applications and fonts on the printer. You need to copy files to specific directories on the USB storage device so that the printer can properly install them.

#### USB Storage Device File Directories

<table>
<thead>
<tr>

</table>

**Print a File from a USB Storage Device**

If you are uploading image files to the printer from a USB storage device, you can print an image file. For example, you can print a file before uploading it to be sure it is the correct file to upload.

1. Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.
2. Insert the USB storage device into the printer USB host port.
3. From the Ready screen, press 🖼. The Main Menu appears.
4. Select **Tools > USB Menu > Print File**. A list of printable files appears.
5. Select the file from the list and press 🖼. The file prints.

**Upload Applications and Files from a USB Storage Device**

This topic explains how to upload applications and files to the printer from a USB storage device.

1. Copy the files to the appropriate directory on the USB storage device.
2. Insert the storage device into the USB host port on the printer. The USB Device menu appears.
3. Select **Install Resources** and then press 🖼.
Chapter 4 — Configure the Printer

4 To upload all files to the printer, select **Install All** and then press \[1\]. All valid files are uploaded to the printer memory.

To upload only one file at a time:

- Select the type of item you want to upload (Applications, Fonts, Forms/Layout, Web Forms, Images, Fingerprint Programs, or Display) and then press \[1\].
- Select the file from the list and then press \[1\]. The file is uploaded to the printer memory.

Export Applications and Files to a USB Storage Device

This topic explains how to export applications and files from the printer to a USB storage device.

**Note:** You can only export applications and files that you previously uploaded to the printer memory.

1 Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.

2 Insert the storage device into the USB host port on the printer. The USB Device menu appears.

3 Select **Export Resources** and then press \[1\]. All applications and files in printer memory are copied to the USB storage device.

Export a Configuration File to a USB Storage Device

You can save an .xml configuration file to a USB storage device and install it on other printers.

1 Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.

2 Insert the storage device into the printer USB host port.

3 From the Ready screen, press \[1\]. The Main Menu appears.
4 Select **Tools > USB Menu**.

5 Select **Configuration**.

6 Select **Export Configuration**. A list of the available files appears.

7 Select the file to export and then press . The file is exported to the USB memory device.

### Install a Configuration File from a USB Storage Device

After you save an .xml configuration file to a USB storage device, you can install it on the printer at any time.

**Note:** If there is more than one configuration file on the USB storage device, the printer imports the first file found in alphabetical order by file name.

1 Insert the USB storage device in the printer USB host port.

2 From the Ready screen, press . The Main Menu appears.

3 Select **Tools > USB Menu**.

4 Select **Configuration**.

5 Select **Install Configuration**. The printer imports the configuration file.

- For most printer languages, the configuration file is imported directly into the working configuration and is not copied to the /config directory.

- An IPL configuration file is copied to /home/user/config/ipl.

- An ESim configuration file is copied to /home/user/config/esim.
Upload or Delete Applications and Resources from the Printer Web Page

From the printer web page, use the Manage page to upload or delete applications, fonts, images, label formats, or web forms.

**Note:** You can only delete applications and resources you downloaded to the printer memory. You cannot delete resident applications or resources, which are installed as part of the printer firmware.

To upload or delete applications or resources from the printer web page, the printer must be turned on and connected to your Wi-Fi or Ethernet network.

1. On your PC, start a browser.
2. In the Location or Address field, type the printer IP address and press Enter. The printer web page appears.
3. Click the Manage tab.

4. In the navigation list, click the type of file you want to upload or delete: Applications, Fonts, Images, Label Formats, or Web Forms. The page for that type of file appears, including a list of Resident (Intermec-supplied) files of that type and a list of Customer Downloaded files of that type (if any).
5 To upload an application or file to the printer:
   a Click **Browse** to locate your application or file.
   b Double-click the file to select it.
   c Click **Upload**. The application or file uploads to the printer.

To delete an application or file, click the file name in the **Customer Downloaded** list and then click **Delete**. The file is deleted.
This section explains how to troubleshoot the PD43 printers.
Chapter 5 — Troubleshoot the Printer

Call Product Support

If you cannot find the answer to your problem in the “Troubleshooting” section, go to the Intermec technical knowledge base (Knowledge Central) at intermec.custhelp.com to review technical information or to request customer support. If you still need help after visiting Knowledge Central, call Product Support.

To talk to an Intermec Product Support representative in the U.S.A. or Canada, call:

1-800-755-5505

Outside the U.S.A. and Canada, go to www.intermec.com and click Contact Us to find your local Intermec representative.

Before you call Intermec Product Support, make sure you have this information ready:

- Printer serial number
- Printer configuration number
- Firmware type and version
- Printer command language
- Wireless or serial port settings
- Installed options
- Media settings
- Ethernet settings
- Bluetooth settings

You can find all of this information on the printer web pages or on a test label.
Locate the Printer Configuration and Serial Numbers

The printer configuration and serial numbers can be found on the product label located on the back panel of the printer.

Problems and Possible Solutions

Use this table to understand and troubleshoot some common problems you may encounter.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer does not feed media correctly.</td>
<td>Remove the media from the media compartment and reinstall the media.</td>
</tr>
<tr>
<td>The printer is connected to a serial port on my PC, but the printer is not working.</td>
<td>Try these possible solutions:</td>
</tr>
<tr>
<td></td>
<td>• Make sure the serial port settings are configured correctly.</td>
</tr>
<tr>
<td></td>
<td>• If you have the Intermec Windows driver for an RS-232 printer installed on your PC, uninstall the driver.</td>
</tr>
</tbody>
</table>
### Problems and Possible Solutions (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The printer is connected to my PC using a virtual COM port, and printing stops. But, there are no errors to indicate that something is wrong.</td>
<td>Make sure that bidirectional support is disabled. From the printer properties dialog box, click the <strong>Ports</strong> tab, and then clear the <strong>Enable bidirectional support</strong> check box.</td>
</tr>
</tbody>
</table>
| The printout is weak. | Try these possible solutions in order:  
  • Make sure that your media setting is appropriate for the type of media you are using.  
  • The contrast may be too low. Increase the contrast.  
  • Replace the printhead. |
| There are weak spots on the printout. | Try these possible solutions in order:  
  • There may be foreign particles on the media. Clean or replace the media.  
  • Make sure that your media and ribbon are compatible.  
  • Make sure that you are using high quality media and ribbon.  
  • The contrast may be too low. Increase the contrast. |
| The printout is dark or there is excessive bleeding on the media. | Try these possible solutions in order:  
  • Make sure your media setting is appropriate for the type of media you are using.  
  • The contrast may be too high. Decrease the contrast.  
  • The printhead voltage may be incorrect or the energy control may be faulty. For help, contact your Intermec representative. |
| There are dark lines along the media path. | The printhead may be dirty. Clean the printhead. |
## Problems and Possible Solutions (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| There are white vertical lines on the printout. | Try these possible solutions in order:  
- The printhead may be dirty. Clean the printhead.  
- There may be missing dots on the printhead. Replace the printhead.  
- The ribbon may not be installed correctly. |
| Part of a dotted line is missing. | Try these possible solutions in order:  
- The printhead may be failing. Replace the printhead.  
- The strobe signal may be failing. For help, contact your Intermec service representative. |
| The inner edge of the printout is missing. | Try these possible solutions in order:  
- The media may not be properly installed or aligned. Reload the media.  
- The media margin or X-start parameter may be set too low. Increase the setting. |
| The content on my printout is compressed. | The print speed may be too high. Lower the print speed. |
| Nothing shows up on my thermal transfer printout. | The ink-coated side of the ribbon may not be facing the media. Reload the ribbon. |
| When I feed or print a label, the ribbon is not taken up. Instead, it spills out the front of the printer. | Try these possible solutions in order:  
- Make sure the ribbon is loaded correctly and that you are using the correct type of ribbon for the printer.  
- If you are using ribbon with a notchless core, you must use the ribbon core adapter for the ribbon feed to work properly. |
**Chapter 5 — Troubleshoot the Printer**

### Problems and Possible Solutions (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ribbon breaks.</td>
<td>Try these possible solutions in order:</td>
</tr>
<tr>
<td></td>
<td>• Make sure your media setting is appropriate for the type of media you are using.</td>
</tr>
<tr>
<td></td>
<td>• Make sure that the ribbon is fitted correctly. Reload the ribbon.</td>
</tr>
<tr>
<td></td>
<td>• The energy control may be faulty. For help, contact your Intermec Service representative.</td>
</tr>
<tr>
<td>The Ethernet or wireless network connection is not working correctly.</td>
<td>Try these possible solutions:</td>
</tr>
<tr>
<td></td>
<td>• Make sure your network cable is securely connected to your printer and a straight “pin-to-pin” cable, not a “crossover” cable.</td>
</tr>
<tr>
<td></td>
<td>• Make sure your PC is correctly configured for and connected to your network.</td>
</tr>
<tr>
<td></td>
<td>• Make sure your printer is correctly configured for your network.</td>
</tr>
<tr>
<td>I cannot connect to the printer web page.</td>
<td>If you are connecting your printer with a crossover network cable, you may need to disable the web browser’s proxy settings on your computer to access the printer web page.</td>
</tr>
<tr>
<td>The printer has RFID media loaded, but it is not writing to the tags.</td>
<td>After you load RFID media, restart the printer to let the printer identify the RFID media type or run the RFID calibration wizard.</td>
</tr>
<tr>
<td>The RFID module is installed in the printer, but “RFID” does not appear</td>
<td>The printer is not communicating properly with the RFID hardware. For help, contact your local Intermec representative.</td>
</tr>
<tr>
<td>None of the RFID commands work.</td>
<td>RFID is disabled. Enable RFID from the web page or the Main Menu. Go to Settings (Main Menu) or Configure tab (web page) &gt; System Settings &gt; Manage I/O.</td>
</tr>
</tbody>
</table>
### Problems and Possible Solutions (Continued)

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printing on regular media (not RFID) is slow and halted in between labels.</td>
<td>RFID is enabled. Disable RFID from the web page or the Main Menu.</td>

</thead>
</table>
| My printer does not communicate with my desktop PC when they are connected with the USB-to-parallel adapter cable. | Windows may not have installed the driver. Follow these steps:  
1 Connect the adapter cable to the printer but not to the PC.  
2 Turn the printer on and wait until the startup process is complete.  
3 Turn the printer off, and then turn the printer on.  
4 Connect the adapter cable to the PC. Windows auto-detects the printer and installs the driver.  
5 After the driver is installed, run a test print. |

How to Restore Default Settings

You can restore default printer settings:

- from the printer web page.
- from the printer main menu.
- from the PrintSet 5 application. For more information, see the PrintSet online help.

Restore Defaults from the Printer Web Page

If the printer is connected to an Ethernet or wireless network, you can restore default settings from the printer web page.

1 On your desktop PC, start a web browser.
2 In the address field, type the printer IP address and then press Enter. The printer web page appears.
3 Click Login in the upper right corner of the screen. The Login page appears.
4 Type your Username and Password in the entry fields and then click Login. The default username is itadmin and the default password is pass.
5 Click the Services tab > Restore Defaults.
Chapter 5 — Troubleshoot the Printer

6 Select the settings you want to restore:
   • Check the **Network settings** check box to restore defaults for all network connections, such as IP address and network name.
   • Check the **User files** check box to erase all files you uploaded to the printer memory.
   • Check the **System Settings** check box to restore defaults for system settings, such as media width or maintenance alerts.

7 Click **Restore Defaults**.

8 Click **Yes** to continue. The printer restarts and the settings you selected are restored to default values.

**Restore Defaults from the Main Menu**

This topic explains how to reset printer settings to their default values from the Main Menu. You can choose to restore default network settings, keep or delete user-installed files, and to restore all system settings like media type or serial port settings.

1 From the Ready screen, press . The Main Menu appears.

2 Select **Tools > Restore Defaults**. The Restore Defaults menu appears with all items in the list selected by default. If you continue without changing anything, the current network and system settings will be restored to default values, and any files or programs you uploaded to the printer will be erased from the printer memory.

3 To restore all default settings, continue with the next step. You can also change the settings that are restored as follows:
   • To keep the current network settings, clear the **Network settings** check box.
   • To keep all applications, fonts, and other files you have installed on the printer, clear the **User files** check box.
   • To keep all current system settings, clear the **System Settings** check box.

4 Select ➡ and press .
Chapter 5 — Troubleshoot the Printer

5 To continue, press . The default settings are restored and the printer restarts. When the printer finishes starting up, the Setup Wizard begins. Follow the instructions to complete the Wizard.

To return to the Main Menu without restoring any defaults, select No. To return to the Restore Defaults list without restoring any defaults, select Cancel.

How to Upgrade the Printer Firmware

You should check for periodic updates to the printer firmware. Updated firmware can include bug fixes or additional features that you might find useful. The latest version of the firmware is available from the printer Downloads page on www.intermec.com.

You can upgrade the printer firmware using:

• the printer web page.
• a USB storage device.
• PrintSet 5. For more information, see the PrintSet 5 online help.

Note: After you upgrade the printer firmware, Intermec recommends that you restore the default settings and calibrate the media sensors.

Download the Printer Firmware Update

Before you can upgrade the printer firmware, you need to download the upgrade file from the Intermec website.

1 Go to the Intermec website at www.intermec.com.
2 Click Support > Downloads.
3 Use Product Category, Product Family, and Product to select the PD43 or PD43c.
4 Click Submit. The latest software appears on the page.
5 Download the latest firmware version to your PC.
Upgrade Firmware from the Printer Web Page

You can upgrade the printer firmware from the printer web page. To configure the printer from the web page, the printer must be turned on and connected to your Wi-Fi or Ethernet network.

1. On your PC, open a browser.
2. In the Location or Address field, type the printer IP address and press Enter. The printer web page appears.
3. Click Login in the upper right corner of the screen. The Login page appears.
4. Type your Username and Password in the text fields and click Login.
5. Click the Services tab and then select Firmware Upgrade. The Firmware Upgrade screen appears, showing the current firmware version.
6. Click Browse to locate the upgrade file, select it, and then click Open.
7. Click Upgrade. The printer web page shows that it is upgrading firmware on your printer.

Upgrade Firmware from a USB Storage Device

You can upgrade the printer firmware from a USB storage device.

Note: For best results, Intermec recommends using a USB storage device that contains no other files.

1. Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.
2. Download the printer firmware from the Intermec website.
3. Copy the firmware upgrade file (typically in .bin format) to the root of a USB storage device.
4. Insert the USB storage device into one of the USB host ports.
Restart the printer. The upgrade file is loaded into the printer memory. This may take several minutes.

For the LCD printer, after the upgrade file is loaded, the printer restarts and the Ready screen appears. The printer is ready to use.

For the icon printer, as the upgrade file is loaded, all icons in the icon panel turn on and then turn off, except for the Maintenance icon. After the upgrade file is loaded, the printer restarts and the Ready-to-Work indicator turns on:

- If the Ready-to-Work indicator turns on and stays on, the upgrade process is finished and the printer is ready to use.
- If the Ready-to-Work indicator is flashing, you need to restart the printer once again to complete the upgrade.
- If the Ready-to-Work indicator is off, there may be a condition that is preventing the printer from restarting. For example, the printer lid may not be fully closed.

**Upgrade Firmware from the USB Menu**

If you have an LCD printer, you can upgrade the printer firmware through the USB menu. This procedure is different from upgrading firmware from a USB storage device without going through the USB menu.

1. Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.
2. Download the printer firmware from the Intermec website.
3. On your USB storage device, create a /firmware directory.
4. Copy the firmware upgrade file (typically .bin format) to the /firmware directory on the USB storage device.
5. Insert the USB storage device into the printer USB host port. The USB Menu appears.
6. In the USB Menu list, select **Upgrade Firmware**.
7. In the Upgrade Firmware list, select the firmware upgrade file and press □. An “Upgrade Firmware?” message appears.
8. Press □ to start the upgrade. When the upgrade is complete, the printer restarts and the Ready screen appears.
About Alerts

To help maintain the printer, you can configure the printer to send alert messages when certain conditions occur. For example, the printer can send a message when the odometer reaches a certain value, or if the printhead is lifted during printing.

There are three types of alerts:

- Error alerts
- Information alerts
- Warning alerts

You configure alert settings in the printer web page. Alert messages can be sent to an email address, an SNMP trap, or both. You can enable or disable each type of alert, set the number of times the alert is repeated, set the unit of measure that determines how often the alert is sent, and change the default text message for the alert.

Configure Alerts

This section explains how to configure alerts and alert messages. You configure alert settings from the printer web page.

**Note:** To configure the printer from its web page, the printer must be turned on and connected to your Wi-Fi or Ethernet network.

1. On your desktop PC, start a browser.
2. In the Location or Address bar, type the printer IP address and press Enter. The printer web page appears.
3. Click Login in the upper right corner of the screen. The Login page appears.
4. Type your Username and Password in the entry fields, and then click Login.
Chapter 5 — Troubleshoot the Printer

5 Click the Configure tab > Alerts.

6 Click Error to configure error alerts.

Click Warning to configure warning alerts.

Click Information to configure information alerts.

7 Change alert settings as necessary. When you are finished, click Save.

To restore default settings for all alerts on the page, click Default Settings.

Maintenance and Error Alert Messages

Use these tables to understand and troubleshoot some common error alerts you may receive and how to fix them.

<table>
<thead>
<tr>
<th>Message</th>
<th>Description and Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Label Not Taken</td>
<td>Printing has been stopped because a label is obstructing the label taken sensor. Remove the label to resume printing.</td>

About Printer System Information

Look in the System Information tab in the printer web pages for useful information and statistics on the printer hardware and firmware. This information can be useful when you contact Intermec Product Support for assistance or troubleshooting.

**Note:** The printer must be connected to an Ethernet or wireless network to view system information in the printer web page.
View Printer Statistics

If your printer is connected to an Ethernet or Wi-Fi network, you can view printer statistics in the printer web page.

1. On your PC, open a browser.
2. In the **Location** or **Address** bar, type the printer IP address and press **Enter**. The printer web page appears.
3. Click the **System Information** tab.
4. Click **Statistics**.
5. Click a category to see more information. For example, click **Print Statistics** to see the number of labels printed and odometer values.

<table>
<thead>
<tr>
<th>Statistic</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System information</td>
<td>Printer uptime and CPU usage, firmware and kernel versions, printer configuration and serial numbers, flash and RAM memory information.</td>
</tr>
<tr>
<td>Print Statistics</td>
<td>Total labels printed, RFID tag success rate, odometer values, total distance printed (printer and current printhead).</td>
</tr>
<tr>
<td>Supply</td>
<td>Printhead, media, and ribbon information.</td>
</tr>

Check the Printer Odometer

You can check the odometer from the printer web page to see the printhead usage and how the current values compare to the alert values. To check the printer odometer from the printer web page, the printer must be turned on and connected to your Wi-Fi or Ethernet network.

1. On your desktop PC, start a browser.
2. In the Location or Address bar, type the printer IP address and press Enter. The web page for the printer appears.
3. Click the System Information tab.
4. Click Odometer. The list of current odometer statistics appears.
This section explains how to perform basic maintenance on the PD43 printers.
Chapter 6 — Maintain the Printer

Clean the Printhead

Cleaning the printhead on a regular basis is important for the life of the printhead and for the print quality. You should clean the printhead each time you replace the media. Follow this procedure to clean the printhead using the cleaning card. If you need to clean additional residue from the platen roller or tear bar, use a cotton swab moistened with isopropyl alcohol.

Caution: Never use hard or sharp tools to peel away stuck labels or other material. The printhead is delicate and can easily be damaged.

1. Turn the printer off and disconnect the printer from power.
2. Open the printer and remove the media and ribbon (if installed).
3. Insert most of the cleaning card under the printhead, and then lower the printhead.
4. Pull out the cleaning card and raise the printhead.
5. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
6. Repeat Steps 3 through 5 if necessary.
7. If necessary, clean residue from the platen roller or tear bar with a cotton swab moistened with isopropyl alcohol.
8. Once the parts are dry, replace the media (and ribbon) in the printer.
9. Close the printer, reconnect power, and turn on the printer.
Replace the Printhead

You need to replace the printhead periodically when it wears out due to the rapid heating and cooling process used during printing. How often you need to replace the printhead depends on factors such as what type of images you print, the type of media or ribbon you use, the amount of energy to the printhead, the print speed, and the ambient temperature of the room you print in. The firmware detects the new printhead when you restart the printer.

1. Turn off the printer and disconnect the power cord.
2. Open the top of the printer.
3. Open the media compartment door.
4. Press the printhead button and raise the printhead.
   For a thermal transfer printer, remove the ribbon.
5. Press the printhead latches apart. The printhead holder swings down and away from the mechanism.
6 Carefully slide the printhead out of the mechanism. The printhead is still attached to the mechanism by a ribbon cable.

7 Disconnect the cable from the printhead and remove the printhead from the printer.

![Image showing the printhead being removed](image)

**Warning:** Do not touch the printhead surface area.

8 Connect the ribbon cable to the new printhead.
9 Slide the printhead into the holders in the print mechanism.
10 Press the printhead onto the locator pins in the mechanism.
11 Tilt the printhead up into the print mechanism and press it into place. When the printhead is in the correct position, the printhead latches snap into place on the sides of the printhead.

12 For a thermal transfer printer, install the ribbon.

13 Press the printhead down to lock it in place.

14 Close the media door and the top of the printer.

15 Print a test label.

**Clean the Platen Roller**

Follow this procedure to remove, clean, and replace the platen roller as part of standard maintenance for the printer. Intermec recommends that you check the platen roller for debris and clean it each time you replace media.

1 Turn the printer off and disconnect the power cord.

2 Open the top of the printer.

3 Open the media compartment door.

4 Press the printhead release button and raise the printhead.

5 Remove the installed media.

6 Press the roller latches apart and tilt them up.
7 Pull the latches up to remove the platen roller from the printer.

8 Remove any adhesive residue from the roller with a cotton swab moistened with isopropyl alcohol.

9 Reverse Steps 6 and 7 to install the roller.

10 Press the latches into the printer until they snap into place.

11 Replace the media in the printer.

12 Press the print mechanism down to lock it in place.

13 Close the media door and printer lid.

Clean the Exterior of the Printer

Make sure to keep the exterior of the printer clean. Maintaining a clean exterior will reduce the risk of dust or foreign particles reaching the inside of the printer and affecting printer functionality.

Use a soft cloth, possibly moistened with water or a mild detergent, when cleaning the printer exterior.

Make sure to keep the surface surrounding the printer clean as well.
This appendix contains specifications for the printers.
Appendix A — Specifications

Printer Specifications

**PD43 and PD43c Physical Specifications**

Dimensions:

Supported Bar Code Symbologies

1D bar code symbologies:

• Codabar
• Code 11
• Code 39:
  • Code 39 full ASCII
  • Code 39 with checksum
• Code 93
Appendix A – Specifications

- Code 128:
  - Code 128 Subset A
  - Code 128 Subset B
  - Code 128 Subset C
  - Code 128 UCC
- DUN-14/16
- EAN:
  - EAN-8
  - EAN-13
  - EAN 128
  - EAN 128 subset A
  - EAN 128 Subset B
  - EAN 128 Subset C
- HIBC 39
- HIBC 128
- Industrial 2 of 5:
  - Industrial 2 of 5 with checksum
- Interleaved 2 of 5:
  - Interleaved 2 of 5 with checksum
  - Interleaved 2 of 5 IATA
- ISBT-128
- Matrix 2 of 5
- Straight 2 of 5
• UPC:
  • UPC-A
  • UPC-D1
  • UPC-D2
  • UPC-D3
  • UPC-D4
  • UPC-D5
  • UPC-E
  • UPC Shipping container Code

Add-on bar code symbologies:
• Add-on 2
• Add-on 5
• UPC-5 digits Add-on code

2D bar code symbologies:
• Aztec
• Code 16K
• Code 49
• Data Matrix
• Dot Code
• Grid Matrix
• GS1 DataBar (previously called RSS-14):
  • GS1 DataBar Expanded
  • GS1 DataBar Expanded Stacked
  • GS1 DataBar Limited
  • GS1 DataBar Stacked
  • GS1 DataBar Stacked Omnidirectional
  • GS1 DataBar Truncated
• MaxiCode
• MicroPDF417
• MSI (modified Plessey)
Appendix A – Specifications

- PDF417
- Planet
- Plessey
- Postnet
- QR Code
- USPS 4-State Customer Bar Code

Composite bar code symbologies:
- EAN-8 Composite (CC-A, CC-B)
- EAN-13 Composite (CC-A, CC-B)
- GS1 Composite (previously called EAN.UCC Composite)
- UPC-A Composite (CC-A, CC-B)
- UPC-E Composite (CC-A, CC-B)
Test Labels

This section describes test label information. A typical test label looks like this:

Sample Configuration Label for Fonts

Appendix A – Specifications
Default Settings

This appendix contains all of the default settings for the printer.
Appendix B — Default Settings

Default Configuration

Use this appendix to view the default settings on the printer. The following tables list the default settings for the printers. If you restore the printer to factory default settings, it will use the values listed here. The order of the settings reflects the organization of the printer web page and Main Menu.

Bluetooth Settings

This section describes Bluetooth settings for the printer. To view these settings:

- From the printer Main Menu, select **Settings > Communications > Bluetooth**.
- From the printer web page, click the **Configure** tab, **Communications > Bluetooth**.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Security</td>
<td>Selects the level of security that is used when pairing devices to the printer. If you select <strong>Authentication</strong>, you must enter a passkey. If you select <strong>Auth + Encrypt</strong>, you must enter a passkey and traffic is encrypted.</td>
<td>Disable</td>
</tr>
<tr>
<td>Device Name</td>
<td>Sets the name that identifies the printer in the Bluetooth network. Maximum length is 16 characters.</td>
<td>Printer model number and serial number. For example, PD43A030000100.</td>
</tr>
<tr>
<td>Discover</td>
<td>Determines if other Bluetooth devices can detect the printer.</td>
<td>Enable</td>
</tr>
<tr>
<td>Passkey</td>
<td>Sets the passkey that is used when pairing Bluetooth devices to the printer. Range is 1 to 16 characters (case-sensitive).</td>
<td>1234</td>
</tr>
<tr>
<td>Reserve</td>
<td>Determines if the printer is exclusively reserved for one Bluetooth device. The first Bluetooth device that connects with the printer locks out any other connection attempts.</td>
<td>Disable</td>
</tr>
</tbody>
</table>
Display and Audio Settings

This section describes display and audio settings for the printer. To view these settings:

- From the printer Main Menu, select **Settings > System Settings > Display** or **Audio**.
- From the printer web page, click the **Configure** tab, **System Settings > Display** or **Audio**.

### Display and Audio Settings

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>

Appendix B — Default Settings

Error, Information, and Warning Alert Settings

This section describes error, information, and warning alerts and settings.

To view these settings, from the printer web page, click the Configure tab, Alerts > Error, Warning, or Information.

**Note:** These alert settings cannot be configured from the printer Main Menu.

Alert settings apply to each of the error, information, or warning alerts and are configured individually by alert.

**Alert Setting Descriptions**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Status</td>
<td>Determines if an alert is sent out for a specific printer event.</td>

Appendix B — Default Settings

Error Alerts
Error alerts are sent when a condition occurs that prevents the printer from printing, such as running out of media. These alerts include:

- Out of Media
- Out of Ribbon
- Printer in Pause Mode
- Printer in Menu Mode
- Application Break
- RFID Not Installed
- Printhead Lifted
- Printhead Not Detected

Information Alerts
Information alerts are sent when a print job is started or completed, or when the printer is rebooting. These alerts include:

- Print Job Complete
- Printer is Rebooting
- Started (Sent when a print job has begun)

Warning Alerts
Warning alerts are sent when the printer may need attention shortly, such as when the printhead needs maintenance, or when the odometer has reached a present value. A warning alert is also sent when the printer firmware is being upgraded. Warning alerts include:

- Ribbon Installed (Sent when the printer is set for direct thermal printing but has ribbon installed for thermal transfer printing)
- Ribbon Low
- Upgrading Firmware
- Odometer (User Resettable)
- Odometer (Printer)
- Replace Printhead
- Clean Printhead
• Faulty Dot (Sent when a faulty dot is detected in the printhead, which can lead to lower print quality)

**Ethernet Settings**

This section describes the Ethernet IPv4 and IPv6 settings. To view these settings:

• From the printer Main Menu, select **Settings > Communications > Ethernet**.
• From the printer web page, click the **Configure** tab, **Communications > Ethernet**.

**Ethernet Settings**

Print Labels with INPrint

This section explains how to use the INPrint feature to print labels.
About the INPrint Page

The INPrint page features sample web forms you can use to quickly and easily print single labels if you are using the Fingerprint or Direct Protocol language on your printer. You select a web form from the lists and enter information in the fields for that label. You can then preview and print the label.

The printer firmware includes several predefined label formats. You can also copy your own label formats to the printer and print them from this page.

Print INPrint Labels

If the printer is connected to an Ethernet or Wi-Fi network, you can print labels by entering information in a web form. You access web forms through the printer web page.

1 On your desktop PC, start a browser.
2 In the Location or Address bar, type the printer IP address and press Enter. The printer web page appears.
3 Click the INPrint tab.
4 Select the web form you want to print:
   • If you created the web form yourself, click Customer Downloaded and then select the web form in the list.
   • To use one of the Resident (Intermec-supplied) web forms, click Resident and then select the web form in the list.
5 Type information in the web form as needed.
6 (Optional) To preview the label on screen, click Preview.
7 To print the label, click Print.
## Predefined INPrint Label Formats
