# Chapter 2 - Set Up the Printer

**Power Up the Printer**

**Calibrate the Touch Screen**
- To calibrate the screen from the website:

**About the Media**
- Load Media for Tear-Off Printing
- Load Media for Rewind Printing
- Load Media for Peel-Off Printing
- Load Fanfold Media

**About the Ribbon**
- Load Ribbon
- Ribbon Removal

**Print a Test Label**

**Printhead Pressure and Toggle Position**
- Pressure Adjustment
- Toggle Position Adjustment
- Toggle Settings

# Chapter 3 - Connect the Printer

**Connect the Printer to Your PC**

**Connect the Printer Using a Serial Cable**

**Connect the Printer Using a USB Cable**

**Connect the Printer to Your Network**
- Connect the Printer to an Ethernet Network

**Configure Bluetooth Communications from the Web Page**

Customer Support

Technical Assistance

To search our knowledge base for a solution or to log in to the Technical Support portal and report a problem, go to www.hsmcontactsupport.com.

For our latest contact information, see www.honeywellaidc.com/locations.

Product Service and Repair

Honeywell International Inc. provides service for all of its products through service centers throughout the world. To obtain warranty or non-warranty service, return your product to Honeywell (postage paid) with a copy of the dated purchase record. To learn more, go to www.honeywellaidc.com and select Service & Repair at the bottom of the page.

Limited Warranty

For warranty information, go to www.honeywellaidc.com and click Get Resources > Product Warranty.
Safety Warnings

⚠️ Warning: Do not put your fingers inside the print mechanism when the power is on.

⚠️ Warning: This printer contains a coin battery and is NOT user replaceable. Keep children away from the printer when the printer is in service.

⚠️ Never put batteries in your mouth as swallowing may lead to serious injury or death. If swallowed, seek medical attention immediately from a physician or local poison control center.

Caution Statements

⚠️ Caution: Observe all safety and accident prevention regulations applicable to your specific region and application.

⚠️ Caution: You must implement both hardware and software safety precautions to prevent the possibility of undefined system states.

⚠️ Caution: You must make sure that dangerous conditions cannot occur under any circumstances, even for a brief period of time.

⚠️ Caution: To reduce the risk of electric shock or fire, keep the cover closed and turn off the printer when not in use. There are no user-serviceable parts inside the power supply unit.

Shipping the Printer

To avoid printer damage during transit:

1. Power off the printer and remove all cables.
2. Remove media and ribbon (if installed) from the printer.
3. Lower the printhead and front arm.
4. Pack the printer in the original container.

Note: Honeywell is not responsible for any damage caused during shipment/transit.
The PX940 industrial printer series includes:

- PX940 Productivity version (PX940A)
- PX940 Verifier version (PX940V) with an integrated barcode verification module.

Both PX940A and PX940V printers are rugged label printers that include integrated USB, RS-232, Ethernet, and Bluetooth LE interfaces. You can connect the printers to a single PC, a wired network, or a wireless (optional) network.

*Note:* Bluetooth LE is only used with Print Set MC to configure the printer on Android and iOS devices.

---

**Features**

- USB host port for connecting storage devices, scanners, or keyboards.
- USB device port to connect to a PC.
- Support for printer command languages including Fingerprint (FP), Direct Protocol (DP), Intermec Printer Language (IPL), Zebra Simulation (ZSim), Datamax Printer Language (DPL), and Smart Printing.

**About the Display**

The front panel has a 3.5 inch full-touch screen that supports touch input with fingers, gloved hands, or a stylus.
Back View (Ports and Power)

Print Button

Use the Print button to feed media, pause print jobs, calibrate, test feed, and print.

<table>
<thead>
<tr>
<th>Printer State</th>

<td>Press the Print button to advance the media.</td>
</tr>
</tbody>
</table>

Ready Screen

The Ready Screen appears when the printer is powered on and has completed its startup process.

*Note:* The icon for Wi-Fi status appears only when the optional Wi-Fi module is installed.
By default, the information bar at the bottom of the screen shows the printer command language and the printer IP address. You will see the time and current date only if the real time clock (RTC) is installed. You can customize the screen to show different types of information.

The status bar at the top of the screen includes these icons:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>🌐</td>
<td>Main Menu</td>
<td>Press the icon to view the main menu for your printer.</td>

</tr>
<tr>
<td>⬅️</td>
<td>Back</td>
<td>Press this icon to navigate back through the printer menus.</td>
</tr>
</tbody>
</table>
Main Menu

On the printer Ready screen, press 🔄 to view the Main Menu.

![Main Menu Icons]

**Note:** If you create menu shortcuts, the Main Menu is replaced by the Quick Choices menu.

Press a button to select the **Programs**, **Settings**, **Tools**, or **Wizards** menu.

- **Programs** displays a list of programs installed on the printer. This list includes utility programs provided as part of the firmware and programs you have installed. **Programs** appears in the Main Menu only if the printer is using Fingerprint or Direct Protocol as the command language.

- Select **Settings** to view and change printer settings.

- Select **Tools** to print test labels, manage a connected USB storage device, restore printer default settings, or save and load printer profiles.

- Select **Wizards** to see a list of wizards that help you configure printing or communication settings, or calibrate the media sensors.

**Note:** The printer cannot print while the Main Menu is showing. Exit the Main Menu and return to the Ready screen to begin printing.
Navigate the Main Menu

Use the status bar buttons to navigate between menus in the Main menu and save changes.

<table>
<thead>
<tr>

</table>

Printer Command Languages and Simulator Support Options

A printer command language is a set of instructions that controls printer functions:

- Configure the printer.
- Return the status of the printer.
- Control peripheral devices.
- Format a label or receipt for printing.

The printer supports these command languages and language simulator support options:

- Autosense
- Direct Protocol
- Fingerprint
- IPL
Autosense

Autosense allows the printer to automatically sense from label to label, the incoming data stream and its language, and print each label accordingly.

Note: Autosense is the default printer configuration and does not support an IPL data stream.

Direct Protocol

Direct Protocol (DP) uses a more intuitive English-like syntax. Direct Protocol lets you combine predefined layouts and variable data to create labels, tickets, and tags. If you are using barcode software, select Direct Protocol as your printer command language.

Fingerprint

Fingerprint is a BASIC-inspired general purpose printer language. Use Fingerprint to design custom label formats and write printer application software. If you plan to run Smart Printing applications directly on the printer, without connecting to a PC, select Fingerprint as your printer command language.

IPL

IPL is a host-based printer command language. Use IPL to design, modify, and download label formats, write printer application software, and configure the printer. If you are sending IPL label files to the printer, select IPL as your printer command language.

Note: IPL can be supported on 200dpi and 300dpi printers only.

ZSim

The ZSim (Zebra Printer Language Simulator) interprets Zebra™ programs (ZPL II or later) without requiring any host programming changes. If you are sending ZPL label files to the printer, select ZSim as your printer command language.
DPL

The DPL command language interprets Datamax™ data streams without requiring any host programming changes. If you are sending DPL label files to the printer, select DPL as your printer command language.

Smart Printing

Smart Printing refers to the ability of the printer to independently run printing operations without being connected to a host computer. If you are running printer-based applications written in C#, select Smart Printing as your printer command language.

Access the Printer Web Page

1. Open a browser window on your PC.
2. In the location or address bar, type the printer IP address and press Enter.
3. Click Login. The Login page appears.

You will be prompted for a user name and password. The defaults are:

- User Name: itadmin
- Password: pass

After logging in, you will be prompted to change your password.

Set the Printer Command Language

You can use one of these methods to change the printer command language:

- From the printer web page
- From the Main Menu
- PrintSet 5
- Print Set MC

From the Printer Web Page

To set the command language from the printer web page, you need to turn on the printer and connect to your network.

1. Make sure that the printer has media and ribbon installed (if necessary).
2. Follow the directions to Access the Printer Web Page.
3. Once you are logged in to the printer web page, click the Configure tab.
4. Click **System Settings > General**.

5. Select the printer command language you want to use from the Command Language list, and then click **Save**. A restart button will appear at the top of the page.

6. Click **Restart**.

**From the Main Menu**

You can use this procedure to change the printer command language from the main menu on the printer.

1. From the Ready screen, press the **Main Menu** button.

2. From the Main Menu, press **Settings > System Settings > General**.

3. Scroll down until you reach **Command Language**, and make your selection.

4. **Restart** the printer: the printer starts up in the command language that you selected.
This section contains information about loading media and ribbon, printing a test label, calibrating the screen, and adjusting the printer.

**Power Up the Printer**

The printer goes through a startup wizard the first time you turn on the power.

1. Connect one end of the power cord to the back of the printer and plug the other end to AC power.

   **Warning:** Installing the printer requires a power cord connected to a socket-outlet with an earthing connection.

2. Press the power switch to turn on the printer.

3. As the printer starts up, a progress bar appears, then the startup wizard appears.

4. Follow the steps on the touch screen to complete the startup wizard.
Calibrate the Touch Screen

You can calibrate the screen from the printer website or from the touch panel on the printer.

To calibrate the screen from the website:

To access the website, make sure your printer is connected to the same network as your computer.

1. Open your browser and type the printer IP address into the web address bar.
2. In the menu section, click on Services > Screen Calibration. If you are prompted to login, the temporary username is itadmin and the password is pass.
3. Click on the blue Screen Calibration button, this will engage the touch panel to start screen calibration.
   - When the small square appears on the front touch panel of the printer, touch the square and continue to touch the square until the printer beeps.
4. Once calibration is complete, your touch screen will automatically return to the Ready screen.

Note: Typical screen calibration consists of five touches (one in each corner and one in the middle of the screen)

About the Media

The printers can print on labels, tickets, tags, and continuous stock. The procedure you use to load media depends on how you are operating the printer and the options you have installed.

Note: The PX940 series printers only support out-wound media.

Load Media for Tear-Off Printing

Tear-off printing is applicable to media with perforation. Printed labels, tickets, and other printed media are manually torn from the front of the printer. These of media can be used for tear-off printing:

- Non-adhesive continuous stock.
- Self-adhesive continuous stock with liner.
- Self-adhesive labels with liner.
- Tickets with gaps, with or without perforations.
- Tickets with black marks, with or without perforations.
To load media for tear off printing:

1. Open the media cover and remove the rewinder plate (if installed).

**Warning:** Moving parts are exposed when the cover is open. Make sure the cover is closed before operating the printer.

**Warning:** The tear bar contains sharp edges. Keep fingers and other body parts away from the tear bar.

2. Turn the printhead lift lever counterclockwise to raise the printhead and lift the front arm or verifier arm.

3. Load a media roll onto the media supply hub.

**Note:** Make sure you push the roll all the way against the inner wall of the printer.
4. Insert the media roll holder and tighten the screw.

5. Route the media through the print mechanism, through the front arm.

6. Adjust the media and dancer guides to hold the media in place.
**Note:** There is a media guide that is located near the printhead. It is recommended to adjust the media guide all the way to the right in order to insert the media. If not, it can be difficult to load the media.

7. Adjust the label gap and black mark sensor. The sensor blue LED should line up with the center of the media.

8. Turn the printhead lift lever clockwise to close the printhead and lower the front arm and click into place.

9. Press the **Print** button to advance the media.

10. Close the media cover.
Load Media for Rewind Printing

Follow steps 1-9 from Load Media for Tear-Off Printing, then:

1. Place the rewinder batch plate back on the printer.

2. Insert an empty media core onto the rewinder take-up hub.

3. Round the media through the rewinder batch plate and tape leading edge of label to the empty media core to secure position.

4. Route the media around the media rewinder.

5. Lock the Rewind/Liner Take-Up knob into closed position.

6. Put media roll holder in place.
7. Go to **Main Menu > Setting > Printing > Media > Printing Mode**, select **Rewind** from the list.

**Note:** *Honeywell recommends using non-perforated labels when using rewinder mode.*

## Load Media for Peel-Off Printing

Follow steps 1-9 from Load Media for Tear-Off Printing, then:

1. Insert the media in the opening between the label dispenser and the platen roller.
2. Insert an empty media core onto the rewinder take-up hub.
3. Round the liner through the media rewinder and tape leading edge of label to the empty media core to secure position.
4. Pull the liner tight and lock the Rewind/Liner Take-Up knob into closed position.
5. Put media roll holder in place.

6. Go to **Main Menu** > **Setting** > **Printing** > **Media** > **Printing Mode**, select **Peel-Off** from the list.

**Note:** Honeywell recommends using non-perforated labels when using peel-off mode.

### Load Fanfold Media

**Note:** Before loading fanfold media, insert an empty media core onto the rewinder take-up hub.

To load Fanfold Media from behind the printer:
To load Fanfold media from bottom access slot:

### About the Ribbon

Thermal transfer printing provides a durable printout that is less vulnerable to chemicals, heat, and sunlight than direct thermal printing. Select a ribbon type that matches the media you are using and configure the printer for thermal transfer media.

The printer supports thermal transfer ribbon rolls with the ink-coated side facing either inward or outward. To determine which type of ribbon you have, place the ribbon on a piece of paper as shown, and use a pen or other sharp object to scratch the ribbon. If you see a mark on the paper, your ribbon is wound ink out.

### Load Ribbon

1. Open the media cover.
2. Turn the printhead lift lever counterclockwise to raise the printhead and lift the front arm.
3. Slide the ribbon roll onto the ribbon supply hub.
**Note:** For ribbon that has the ink wound out, place the ribbon on the ribbon supply hub with the ribbon wound clockwise. For ribbon that has the ink wound in, place the ribbon on the ribbon supply hub with the ribbon wound counterclockwise.

4. Route the ribbon through the print mechanism and pull out approximately 8 inches (20cm) of ribbon leader.

The dotted line in this illustration shows how to load ribbon with the ink wound in.

5. Turn the ribbon take-up hub counterclockwise until the ribbon becomes tight and runs wrinkle-free through the print mechanism.

6. Set the Ribbon Selector switch to **Ink In** or **Ink Out**.

7. Close the media cover.

**Note:** Ensure that the knob at the take up is not pushed in during rewinding. This can cause difficulty removing the ribbon when full.

**Ribbon Removal**

Remove used ribbon from the ribbon take-up hub when you change the roll of ribbon. Remove the used ribbon each time you change a new roll of media if the ribbon is less than the width of the printhead.

To remove the used ribbon:
1. Break/tear the ribbon before the ribbon take-up hub.

**Note:** Do not cut the ribbon on the ribbon take-up hub; doing so may result in damage to the take-up hub.

2. Push and hold the ribbon release knob until it stops.

**Note:** Do not push the ribbon release knob in if you do not want to remove the used ribbon as this will cause difficulty to remove ribbon when full.

3. Push the two ribbon release plates and slide the used ribbon from the ribbon take-up hub.

---

### Print a Test Label

The first time you turn on the printer or reset to factory defaults, the printer runs a startup wizard to let you enter basic setup information. After the startup wizard finishes, the printer enters Ready mode where you can access the Main Menu and print a test label.

1. Connect the printer to power and turn on the printer.
2. After the startup sequence finishes, the startup wizard begins. Enter all the information on the wizard screens then tap No when prompted to run other wizards.
3. From the Ready screen, press to view the Main Menu.
4. From the Main Menu, tap **Tools > Test Labels**.
5. Select the test label you want to print and tap it.

Your test label prints. If print quality is low, go to **Wizards > Printing > Print Quality**.

**Note:** You can use command languages, like Direct Protocol, and language simulators, like ZSim, to create and print labels. For more information, see the command reference manual for the language.
Printhead Pressure and Toggle Position

Pressure Adjustment

You may need to adjust the printhead pressure on the printer if:

- You are using thicker or thinner media than previously.
- Your thermal transfer ribbon starts to crease.

Do not use a higher printhead pressure than necessary. It may increase the wear on the printhead and shorten its life.

1. Use your finger to turn the wheel to adjust pressure.
   - Rotate the wheel clockwise to increase the pressure resulting in darker print.
   - Rotate the wheel counterclockwise to decrease the pressure resulting in lighter print.

2. Test for Print Quality

   **Note:** Marking on the toggle, “L”: Light pressure; “M”: Middle pressure; “H”: High pressure.

Toggle Position Adjustment

If the toggles are not adjusted in the correct position or do not apply the correct pressure, the following issues may occur:

- Labels print lighter on one side than the other
- Media and ribbon may slip
- Ribbon may wrinkle
- Media may move from side to side during printing

If any of these things occur, you probably have an unbalanced printhead. The printer is adjusted at the factory for full-width media.
If you are using media that is less than full-width (4 inches or 102mm), adjust the position of the toggle as necessary to provide the even pressure on the media.

**Toggle Settings**

<table>

</tbody>
</table>
This section contains information about connecting the printer to a PC or to a network. Use the From the Printer Web Page or the Main Menu to configure settings.

**Connect the Printer to Your PC**

You can connect the printer to your PC using one of the following methods.

**Connect the Printer Using a Serial Cable**

You can use a serial connection to communicate with your PC and send commands directly to the printer through a terminal connection.

1. Connect one end of the DB9 to DB9 RS-232 cable to the back of your printer and connect the other end to a serial COM port on your PC.

**Connect the Printer Using a USB Cable**

Connect only one printer to your PC, either directly or through a hub. You do not need to set up any parameters for USB communications.

1. Download and install the InterDriver software on your PC (see Install Honeywell Windows Driver).
2. When prompted, connect one end of the USB Type A cable to the back of the printer and connect the other end to your PC.

**Connect the Printer to Your Network**

These network interfaces provide features such as security, FTP/SFTP server, web page, and Alert handling.
Connect the Printer to an Ethernet Network

Use the Ethernet port to set up your printer as a network printer. The printer is set to automatically retrieve an IP address from the network (DHCP) when you turn the printer. You can use the network connection with InterDriver. You can also use it to send commands directly to the printer through a terminal connection (Telnet), or through FTP/SFTP.

**Note:** To enable the FTP/SFTP from the webpage, go to **Configure > System Settings > Manage Service.**

1. Turn the printer off.
2. Connect the Ethernet cable to the Ethernet port in the rear of the printer and connect the other end of the cable to your network.
3. Turn the printer on.
4. If your printer uses a DHCP server to assign IP addresses, the IP address appears in the lower left corner of the screen.
5. If you are not using a DHCP server to automatically assign IP addresses to devices in your network, you must set a static IP address and other network information manually. Continue with the next step.
6. For a non-DHCP network:
   - From the Main Menu select **Settings > Communications > Ethernet > IPv4** or **IPv6** and change the settings as needed.

<table>

</table>

Configure Bluetooth Communications from the Web Page

The printer must be connected to an Ethernet or wireless network and you must know the printer IP address.

1. Open a web browser on your PC and click **Login**.
2. Type your Username and Password and click **Login**.
3. Click the **Configure** tab. The Configuration Summary page appears.
4. Click **Communications > Bluetooth**. The Bluetooth settings page appears.
5. Change Bluetooth settings as needed. You can also click Default Settings to restore all default Bluetooth settings.

6. Click Save.

Configure Bluetooth Communications from the Main Menu

Use this procedure to configure Bluetooth settings from the printer Main Menu. You may need to configure these settings if you want to connect to a mobile computer through Bluetooth.

1. Press the Main Menu button.
2. Select Settings > Communications > Bluetooth.
3. Change settings as needed for your Bluetooth device.
4. Tap Save.

Connect the Printer via Wi-Fi

The printer supports wireless communications when the optional Wi-Fi module is installed.

You can configure wireless communications:

- From the printer web page.
- From the printer Main Menu.

By default, the printer supports DHCP networks.

**Note:** If you are not using a DHCP network, Wi-Fi settings must be configured by using Honeywell PrintSet 5 through a USB connection to the printer. Send commands through a serial connection, or use the wizards and settings menus on the printer.

Configure Wi-Fi Communications from the Web Page

Use this procedure to configure wireless communications from the printer web page.

**Note:** The printer must be turned on and connected to your Wi-Fi or Ethernet network to configure the printer from the web page.

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press Enter. The printer web page appears.
3. Click Login.
4. Type your Username and Password and then click Login. The default value for Username is itadmin and the default value for Password is pass.
5. Click the Configure tab. The Configuration Summary page appears.
7. Change wireless settings as needed. You can also click **Default Settings** to restore all default Wireless 802.11 settings.

8. Click **Save** when you are finished.

### Configure Wi-Fi Communications from the Main Menu

You can configure wireless communications using the Wireless 802.11 wizard or from the Main Menu.

1. Press the Main Menu button.
2. Select **Settings > Communications > Wireless 802.11**.
3. Change settings as needed for your wireless connection.
4. Tap **Save** when you are finished.

### Install Authentication Certificates

If you are using Wireless 802.11 security, you may need to install authentication certificates in the printer for the highest level of security.

1. Configure the printer for the correct date and time.
2. On your PC, open an FTP/SFTP connection to the IP address of the printer.
3. Transfer your certificate to `/home/user/certificates/public`.
4. On your PC, open a Telnet session to the printer.
5. Change the directory to: `/home/user/certificates/public`.
6. Type the command: `ls -la`.
7. You should see the certificate that you transferred in step 3.
8. Use the certinstall script to install the certificate using this format: `<prompt> certinstall.sh <certificate name>`

   Example: `itadmin@PX940-00000000073 /home/user/certificates/public$certinstall.sh entrust.cer`

9. When you receive confirmation that the certificate was installed, type this command to make sure you see a.pem file and another soft link to the same file: `ls -la`.

**Note:** Use the printer web page the Main Menu, or Honeywell PrintSet 5 to specify the certificate .pem file to use for security.
Printer Drivers

Before you can use the printer with Microsoft® Windows® printing applications, you must install printer driver software on the PC. Drivers enable the printer to communicate with your PC and with printer software applications.

You can access the Honeywell Technical Support Downloads portal at: https://hsmftp.honeywell.com. Click on Software › Printers › Printer Software and Drivers)

Note: Although Windows may auto-detect the printer when you connect it to a PC through a USB port, you still need to install printer drivers on the PC for the printer to operate correctly.

Install Honeywell Windows Driver

Use InterDriver to install printer driver software on your PC.

Note: Although Windows may auto-detect the printer when you connect it to a PC through a USB port, you must still install printer drivers on the PC for correct printer operation.

2. Download Honeywell Software Download Manager by clicking here in the web page. Install the Download Manager.
3. Click on the (+) to expand the list. Then go to Software › Printers › Printer Drivers › Honeywell Windows Driver.
4. Open the Honeywell Software Download Manager and follow the instructions to download the file.
5. Extract the driver files to a location on your PC.
6. Double-click the.exe file to install InterDriver and follow the prompts to complete the installation.

USB Host Port

Use the USB host interface port on the printer to connect these peripheral devices:

<table>
<thead>
<tr>
<th>Device</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keyboard</td>
<td>Use a standard USB keyboard to send Fingerprint printer language commands directly to the printer or to enter information if you are running a Smart Printing application.</td>
</tr>
<tr>
<td>Barcode scanner</td>
<td>Use USB barcode scanners for data input with a Smart Printing application. The printer also supports other USB scanners that use a generic keyboard driver.</td>
</tr>
</tbody>
</table>
You can also connect a peripheral device through the USB-to-Serial or USB-to-Parallel adapter cable accessories. Contact your local sales representative for information.

<table>
<thead>
<tr>
<th>Device</th>

</tr>
<tr>
<td></td>
<td>storage device must have a single partition and be formatted as FAT16 or</td>
</tr>
<tr>
<td></td>
<td>FAT32.</td>
</tr>
</tbody>
</table>

**Connect a USB Device**

A USB storage device can be inserted into the USB host port on the front of printer or into the USB host port on the back of the printer.

1. If you are connecting a USB storage device, make sure the device has a single partition and is formatted as FAT16 or FAT32.
2. Connect the device to one of the USB host ports.
3. If you connected a USB storage device to an LCD printer, select **Tools > USB Menu** for more options.
Use one of these methods to view and change printer settings:

- Printer web page
- Main Menu
- PrintSet 5
- Print Set MC
- Programming commands

Printer Configuration Menus

The structure of the printer configuration menus is consistent among the different interfaces. The same organization appears whether you are accessing the menus through the web page or the printer Main Menu. There are four main printer configuration menus for each interface:

- Printing
- System Settings
- Verification Settings (PX940V only)
- Alert

Use the following table to understand where information is located in the printer configuration menus. Not all configuration items appear in each type of interface.

<table>
<thead>
<tr>
<th>Configuration Menu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Printing</td>
<td>Media and Print Quality</td>
</tr>
<tr>
<td>System Settings</td>

<td>General, Security, and Network</td>
</tr>
</tbody>
</table>
Printer Configuration

Configure the Printer from the Main Menu

You can view or change the configuration settings by pressing the Settings button from the Main Menu.

1. From the Ready screen, press the Main Menu button.
2. From the Main Menu, press the Settings button. The Settings menu appears.
3. Select the settings you want to configure and make your changes.
4. Save your changes when prompted.

Restrict Access to the Main Menu

By default, all menus are available from the Main Menu the first time you turn on the printer. If necessary, you can require a PIN to restrict access to menus or you can disable access to all menus.

<table>
<thead>
<tr>
<th>Menu Access Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable (default)</td>
<td>All users can access the menus from the Main Menu and from the USB flash drive menu.</td>
</tr>
<tr>
<td>Enable with PIN</td>
<td>Users need to enter a PIN to access the Main Menu or USB flash drive menu.</td>
</tr>
<tr>
<td>Disable</td>
<td>Users cannot access the menus from the Main Menu or from the USB flash drive menu.</td>
</tr>
</tbody>
</table>

1. Go to the Display menu for the printer:
   - From the web page (see Smart Printing), select Configure > System Settings > Display.
   - From the Main Menu screen, select Settings > System Settings > Display.
2. Select a Menu Access setting and save your changes.
3. If you select Enable with PIN, you also need to type in a PIN and save your changes.

Access the Printer Web Page

4. Open a browser window on your PC.
5. In the location or address bar, type the printer IP address and press Enter. The printer web page appears.
6. Click Login. The login page appears.
Printer Webpage User Name and Password

You will be prompted for a user name and password. The default username is itadmin and the default password is pass. Once you login, you have the option to change the user name and password.

Configure the Printer from the Web Page

If you are using Ethernet or Wi-Fi communications, you can change configuration settings from the web page of the printer. Connect the printer to your network and obtain an IP address.

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press Enter. The printer web page appears.
3. Click Login. The Login page appears.
4. Type your Username and Password and then click Login. The default value for Username is itadmin and the default value for Password is pass.
5. Click Configure. The Configuration Summary page appears.
6. To see a complete list of printer settings, click Configuration Summary.
7. To configure printer settings, click an item in the navigation pane:
   • For serial, Ethernet, Wireless 802.11, or Bluetooth LE settings, click Communications.
   • For media or print quality settings, click Printing.
   • For display, audio, service, and general settings, or maintenance alert message triggers click System Settings.
   • To set conditions that trigger error, warning, and information alert messages, click Alerts.
   • For network-related settings (such as DNS, WINS, Net1), for web and email server information, or if you are using a network management application, click Network Services.
8. Make any changes to the settings you want to configure.
9. To save your changes, click Save.
10. To reset all parameters on the page to the default settings, click Default Settings.
Configure the Printer with PrintSet 5 or Print Set MC

You can use PrintSet 5 or Print Set MC to change configuration settings on your printer. Download the PrintSet 5 or Print Set MC from the App Store on iOS or Google Play Store on Android devices.

You can download Honeywell applications to extend the capabilities of the printer. You may need to purchase a license to run some applications. To learn more about licenses and other Honeywell software solutions, go to www.honeywellaiddc.com > Browse Products > Software.

Support for Honeywell Safety and Productivity Solutions products is available online through the Technical Support Portal.

Configure the Printer with Programming Commands

You can change configuration settings by sending programming commands directly from your PC to the printer through a terminal program (such as HyperTerminal), a serial connection, or a network connection.

If your printer uses the Fingerprint programming language, use the SETUP command followed by the node, subnode, and parameter setting.

You must log in as an itadmin to perform a SETUP operation, but you do not need to log in to perform a SETUP GET operation.

*Note:* For more information on how to change configuration settings with a programming language, see Printer Command Languages and Simulator Support Options, beginning on page 6.

Uploading from the Web Page

You can use the printer web page to install fonts, images, applications, formats, and web forms to the printer.

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press Enter. The printer web page appears.
3. Click Login. The Login page appears.
4. Type your Username and Password and then click Login. The default value for Username is itadmin and the default value for Password is pass.
5. Click the Manage tab. The Overview page appears.
6. Click on the desired item in the Overview list. The upload page appears for the option you selected.
7. To upload a file to the printer, click Browse to locate your file. Double-click the file to select it, then click Upload. The file uploads to the printer.
8. Click Save when you are finished.
Uploading from a USB Storage Device

You can use a USB storage device to install fonts, images, applications, formats, and web forms to the printer. Use this table to understand where your files need to be located on the USB storage device for the printer to install them.

<table>
<thead>
<tr>
<th>File Type</th>
<th>Directory to Place the File</th>
<th>Installed in this Printer Directory</th>
</tr>
</thead>
<tbody>
<tr>
<td>Application</td>
<td>/apps</td>
<td>/home/user/apps</td>

<td></td>
</tr>
<tr>
<td>Start file</td>
<td>Root of USB storage device</td>
<td></td>
</tr>
<tr>
<td>Web Form</td>
<td>/webforms</td>
<td>/home/user/webforms</td>
</tr>
</tbody>
</table>

1. Copy your files to a USB storage device using the directories in the table.
2. Insert the USB storage device into one of the USB host ports on the printer.
3. The USB Device menu automatically appears:
   a. Select **Install Resources**.
   b. Select the file you want to install and wait until the item turns gray and a checkmark appears next to it. The file is now successfully installed in the printer.
   c. Continue to another file if you have more files to install.

Change Background Image for the Ready Screen

You may customize the Ready screen that appears on the printer. The background image you create must be:

- 320 x 240 pixels.
- named **background_idle.png**.

1. Create a /display directory on your USB storage device.
2. Copy your **background_idle.png** file to the /display directory on the USB storage device.
3. Insert the USB storage device into one of the USB host ports on the printer.
4. Use the USB Device menu to upload the file to the printer.
5. Restart the printer.

The new image file you uploaded appears in place of the original Ready screen.

**Printer Profiles**

You can save updated printer default settings as a printer profile. The printer supports multiple profiles that can be saved and loaded at any time. For example, you can create one profile to use when you are printing on continuous label stock, and a different profile to use when you are printing on label stock with gaps.

The following printer settings are not saved in a profile:

- IP address for either IPv4 or IPv6 networks
- Media calibration settings for the label stop sensor
- Remote port or remote host values for a remote computer accessing the printer through raw TCP

**Save a Printer Profile from the Web Page**

From the printer web page, you can save the current settings as a profile that you can load from the printer memory at any time.

1. In the printer web page (see Access the Printer Web Page), click the **Configure** tab.
2. Click **System Settings > General**.
3. Click **Save As Profile**. The Save As Profile screen appears.
4. Enter a name in the Profile field, and then click **Save**.

**Load a Printer Profile from the Web Page**

You can load a saved profile from the printer web page.

1. In the printer web page (see Smart Printing), click the **Manage** tab.
2. Click **Profiles**.
3. The Resident list includes profiles that are saved in the printer memory.
4. To load a profile from the printer memory, select the profile in the Resident list and then click **Activate**. The profile is loaded.
5. To load a profile from another location, click **Browse** and browse to the location of the file. Double-click the file to select it, then click **Upload**. The profile is uploaded to the printer.
Save a Printer Profile from the Main Menu

Use this procedure to save the current settings as a printer profile.

1. From the Ready screen, press the Main Menu button. The Main Menu appears.
3. Select Create. The Create Profile menu appears.

**Note:** selecting Create acts as the Save function

4. Select the Filename text box and type a name for the profile. The profiles can have up to sixteen characters.

5. Press  on the SIP to save your profile name and go back to the Save Profile menu.

6. Press  and wait until Complete appears on the screen.

7. Press  to return to the Main Menu.

Load a Printer Profile from the Main Menu

Use this procedure to load a saved printer profile on the printer.

1. From the Ready screen, press the Main Menu button. The Main Menu appears.
3. Select Load. The Load Profile menu appears.
4. Select the profile you want to load on the printer and press .
5. When Complete appears on the screen, press  to return to the Main Menu.

Load a Printer Profile Using Programming Commands

You can load a saved printer profile to another printer by sending programming commands directly from your PC to the printer through a terminal program (such as HyperTerminal), a serial connection, or a network connection. All commands are case-sensitive.

**Note:** To load printer profiles that modify communication settings that require itadmin rights, you must log in as an itadmin: RUN “su - p pass itadmin” for FD/DP.
Install a Configuration File from a USB Storage Device

After you save an .xml configuration file to a USB storage device, you can install it on the printer at any time.

1. Insert the USB storage device in the printer USB host port.
2. From the Ready screen, press the Main Menu button. The Main Menu appears.
3. Select **Tools > USB Menu**.
4. Select **Configuration**.
5. Select **Install Configuration**. The printer imports the configuration file.
   - For most printer languages, the configuration file is imported directly into the working configuration and is not copied to the /config directory.
   - An IPL configuration file is copied to /home/user/config/ipl.
6. Press **OK** when the confirmation message appears.

Export a Configuration File to a USB Storage Device

You can save an .xml configuration file to a USB storage device and install it on other printers.

1. Make sure the USB storage device has a single partition and is formatted as FAT16 or FAT32.
2. Insert the storage device into the printer USB host port.
3. From the Ready screen, press the Main Menu button. The Main Menu appears.
4. Select **Tools > USB Menu**.
5. Select **Configuration**.
6. Select **Export Configuration**. A list of the available files appears.
7. Select the file to export.
8. Press **OK** when the confirmation message appears.
Menu Shortcuts

You can create shortcuts to access frequently used menus or items, such as profiles, applications, test labels, and wizards. These shortcuts are added to a Quick Choices menu, which replaces the Main Menu.

The Main Menu appears as the first item in the Quick Choice menu. Items in the Quick Choice menu appear in the order in which they are added. The Main Menu always appears as the first item.

Menu shortcuts can be very useful in these situations:

- You need to frequently change media. Create a profile for each media type and create shortcuts for each profile. To quickly change the printer media settings, press the Main Menu icon from the Ready screen to display the Quick Choice menu, then select the appropriate media profile.
- You frequently run Smart Printing applications. Create a shortcut for each Smart Printing application. To access these applications, press the Main Menu icon from the Ready screen to display the Quick Choice menu, and select the appropriate application.

Create Menu Shortcuts

1. From the Main Menu, select Tools > Quick Choices > Add.
2. To load a profile:
   a. Select Load Profile.
   b. Select Load Profile again and a check mark appears in the box.
   c. Select the arrow at the bottom of the screen.
   d. Select the check mark icon at the bottom of the screen.
3. To select applications:
   a. Select Programs.
   b. To add a Program, select each program and a check mark appears in each box.
   c. Select the check mark icon at the bottom of the screen.
4. To select test labels:
   a. Select **Tools**.
   b. Select **Test Labels**.
   c. To add individual test labels, select each test label option and a check mark appears in each box.
   d. Select the check mark icon at the bottom of the screen.

5. To select wizards:
   a. Select **Wizards**.
   b. To add individual wizards, select each wizard and a check mark appears in each box.
   c. Select the check mark icon at the bottom of the screen.

6. The next time you press the Main Menu icon from the Ready screen, the Quick Choice menu (containing the Main Menu and your menu shortcuts) appears.

---

**Customize the Printer Web Page**

The printer web page visual presentation is specified using a CSS (Cascading Style Sheet). The printer web page loads the default style.css.

There are two ways to customize the printer web page:
- Adjusting layout style
- Replacing complete standard web pages

To adjust the style sheet:

1. Retrieve the default CSS file from the printer: http://<printerip>/format/style.css.
2. Modify the style sheet and save your changes.
3. Upload the style sheet to the printer via /home/user/webpage/style.css.

The layout and structure of the printer web page is the same throughout each of the different pages. Below is an overview of how the web page looks with three different main components that always exist:

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left-Menu Navigation</td>
<td>Define in mainmenu.lua For each of the pages, this area will show links to more detailed pages depending on which section is currently shown. On the Home Page this area will show the current status of the printer.</td>
</tr>
<tr>
<td>Right Top Bar</td>
<td>Define in maintop.lua Displays the information about the printer/login/language as well as printer’s status.</td>
</tr>
<tr>
<td>Main Content</td>
<td>Here is where all the content is displayed to the user.</td>
</tr>
</tbody>
</table>
CHAPTER 5

ABOUT THE VERIFIER

The verifier identifies and verifies the barcodes in printed outputs using supported command languages. When media is printed, the verifier ensures barcode readability and quality.

**Note:** Do not power off the printer during printing/verification. This can result in loss of verification reports.

Setting up the Verifier

The verifier can be configured through the webpage by clicking on **Configure > Verification Settings** or through the front touch panel, **Settings > Verification Settings**.

Webpage

The supported features are listed as the following:
- Verification configurations
- Verification statistics
- Restore default verification database and failed label image files
- Verification reports for download

Front Panel

The supported features are listed as the following:
- Verifier Calibration Wizard
- Verification Results: allows the user to browse through all the barcodes and detailed results of the last label printed.
- USB port to export all verification reports and saved label image files.
Calibration

Calibrating the verifier maintains the accuracy of the verifier when scanning an image. Calibration is performed prior to the shipment of the printer, but can also be done with the calibration card.

**Note:** Honeywell recommends calibrating the verifier every six months for maximum performance.

Verifier Calibration Card

The calibration card is used to calibrate the verifier. It is very important to follow the instructions on the calibration card packaging for proper care of the calibration card. If you lose your calibration card, visit www.honeywellaidc.com and navigate to the PX940 printer product page.

Handling Instructions

- When not in use, keep the calibration card inside its original packaging, away from direct light exposure and stored at room temperature
- Keep calibration card clean.
- Use a dry cloth to remove any dirt if needed.
- Do not bend the card
- Do not perform verifier calibration if the card is damaged.

**Note:** DO NOT touch the section of the calibration card that is enclosed in the red box as shown below.

If your verifier is not calibrated, follow these steps:

**Note:** Do not power off the printer during verifier calibration.
Calibrating the Verifier

1. From the front touch panel, go to: Wizards > Calibration > Verifier and follow the instructions.

2. Open the verifier arm and print head arm.

3. Remove any media and ribbon from the printer media path.

4. Clean the printhead, platen roller, and verifier glass with a soft, lint-free cloth soaked in isopropyl alcohol.

5. Place the calibration card on the printer media path, according of the instructions written on the calibration card.
   - The three chevrons on the card indicating the orientation. The "FRONT" text on the card placed outside of the verifier
   - Align the black line with the printer tear bar. Use the diamond cut out on the calibration card black line to align to the tear bar.

   Warning: The tear bar contains sharp edges. Keep fingers and other body parts away from the tear bar.

   Note: You should see the tear bar through the diamond cut on the calibration card black line.
     - Align the card evenly toward the printer spine and resting against the media guide.

6. Close the verifier arm and then the printhead.

7. Press NEXT on the touch screen.
   - The card will move forward as the calibration process is running.

8. Once completed, the front panel will show if the calibration pass or fail.

   Note: If Calibration fails, see Verifier Error Alerts and Solutions, beginning on page 69.

Verification Settings

This section gives a brief description of the verifier settings.

Verification Type

Select the verification type to check the barcode.

- None - No barcode validation
- Read/No Read - Validate if barcode is readable
- ISO15415/15416 - Full ANSI grading of barcode
Grading Override

When enabled, the user is allowed to decide to accept the failed label (below the grading threshold) when prompt for user action when maximum consecutive failures count is reached.

Report Level

Select the database logging level. The grade details only applicable for ISO 15415/15416 setting.

- Level 1 - No logging
- Level 2 - Label grade
- Level 3 - Label grade, and barcode grade
- Level 4 - Label grade, barcode grade, and barcode ANSI grading details
- Level 5 - All details including 10 scan line data

Passing Grade

Sets the minimum passing grade for barcode grading. Grade 0.0 (F) is the lowest grade. Grade 1.5 (C) is the default and recommended by ISO standard. Only applied when verification type is set to ISO15415/15416.

Aperture

Indicates the aperture size in mils (1000 mils = 25.4mm) used for verification. Aperture size will be chosen automatically based on ISO standard. Change only if required by an overriding application.

Maximum Consecutive Failures

Sets maximum number of times printer encountered verification failure consecutively before prompting for user action. This setting is only applicable when the Verification Failure Action is set to Void and Reprint.

Verification Failure Action

Indicates action to take when label fails verification.

- Void and Reprint (default) - Retract and void the failed label, then reprint the failed label. Stop reprint if the maximum consecutive failures have been reached.
- Ignore and Continue - No voiding when verification fails. Result is saved and next label is printed.

Note: During multiple label printing, printer will void the failed label (plus all printed and yet to be verified labels) in order to keep the good labels in sequence.
About Reprint Mode

Save Failed Label Images

When enabled, the printer saves all failed label images and XML reports in non-volatile memory. Maximum 100 images and XML reports can be saved (if memory available). At maximum capacity oldest image and XML report file will be replaced by newest.

Void Pattern

Select the void pattern type to mark the failed label.

Note: The grid pattern makes the barcode non-readable whereas the diamond pattern is a visual void pattern.

Note: Grid pattern may cause media jam on certain special media configurations.

Print Modes and Speed

Print verification works for the following mode:

- Printer command language: Autosense, FP/DP, ZSim, IPL, DPL

Barcode Symbologies Supported

The verifier supports the following barcode symbologies:

- Code 39
- HIBC 39
- Code 128
- ISBT-128
- HIBC 128
- EAN-8

• Interleaved 2 of 5
• ITF-14
• Data Matrix (square and rectangular) ECC 200
• ISBT Data Matrix

Barcode Orientations
• Picket or ladder orientation

Barcode Size Supported
• Minimum 1D barcode size: 10 mils
• Minimum 2D barcode size: 15 mils

Verification Length
Support maximum verification length up to 12 inches.

Maximum Number of Barcodes per Label
A total of 32 barcodes can be scanned and verified per label. If the number of barcodes on one label exceeds 32, the verifier system will show an error message.

Note: Preprinted barcodes and barcodes sent as graphic print jobs will not be verified.

Note: Only barcodes generated by printer language commands are supported for verification.

Printing Behavior after Error Recovery
Possible printer error during printing & verification:
• Printhead lifted
• Front arm lifted
• Next label not found
• Out of media
• Out of ribbon
• Ribbon installed
Printing Behavior after Recovered from error above:

1. No void printing. User will need to manually mark/discard the labels between the verifier module and printhead.
2. Reprint all unverified labels and verification failed labels.

The following diagrams show which labels will be reprinted in different scenarios.

**Scenario 1**

- All blue labels will be reprinted and verified after error recovery.
- All blue labels will be marked as `FAIL` in verification result database.

**Scenario 2**

- All blue labels will be reprinted and verified after error recovery.
- All blue labels will be marked as `FAIL` in verification result database.
Scenario 3

- Label verification in progress.
- This label will be marked **PASS** in verification result database.

Scenario 4

- Label verification in progress.
- This label will be marked **FAIL** in verification result database.

**Unsupported Barcode Behavior**

The printer will display an “Unsupported Barcode” warning message in all user interfaces (UI, webpage, SNMP, PrintSet, etc.) if there is an unsupported barcode type or unsupported barcode size in the label.

In the verification report, if all the supported barcodes in the label are PASS, then “Label Status” will display PASS and the printer will rely on the “Label Status” for verification failure handling.

If there an unsupported barcode exists in the label, there will be a status field to indicate the barcode is unsupported due to unsupported type or unsupported size.

**Example:**

Scenario 1: All barcodes printed on the label are unsupported or unsupported size
• Label Status = Pass
• Individual barcode status = Unsupported Barcode / Unsupported Size
• UI display “Unsupported Barcode” warning message

Scenario 2: At least one barcode printed on the label is supported
• Label Status = Pass/Fail (based on supported barcode)
• Individual barcode status = Pass/Fail/Unsupported Barcode/Unsupported Size
• UI display “Verification Fail” if label status is Fail, otherwise it will display “Unsupported Barcode”

Verification Failed Error Handling

When the print job’s barcode has failed in the verification process, there are several ways to identify and fix the issue:
• Voiding the label and reprinting (default)
• No voiding and proceed with subsequent print jobs.

Note: In the Webpage menu, Verification > Verifier Image, you can access the last label image scan (if available)

Failed Label Image File

<table>
<thead>
<tr>
<th>Summary</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Image Format</td>
<td>JPG</td>
</tr>
<tr>
<td>Maximum Files</td>
<td>100 files or flash memory is 75% full before the printer start to replace the oldest file in a round robin.</td>
</tr>
<tr>
<td>Path</td>
<td>/home/user/verifier/images</td>
</tr>
<tr>
<td>File name</td>
<td>&lt;Printer Model Name&gt;<em>.&lt;Printer Serial Number&gt;</em>&lt;LabelID&gt;_YYYYMMDD_HHMMSS.jpg</td>
</tr>
</tbody>
</table>

Example: PX940V_0000001234567_1_20181026_142800.jpg

The failed label image will not be generated if one of the following scenarios is true
• All supported barcodes in the label are meeting the passing grade or readability criteria.
• “Saved Failed Label Images” setting is disabled.

The failed label image file can be downloaded through the following method:
• USB Thumbdrive
• FTP/SFTP
• Webpage
USB Thumbdrive

1. Export all existing individual verification reports and failed label image files
   • Insert the USB thumb drive to the printer.
   • Go to **TOOLS** menu from the LCD to export all verification results.
   • Select **Remove USB** to safely remove the USB thumbdrive.

   **Note:** If images are saved on a thumbdrive, the limit is the thumbdrive capacity.

2. Saving verification results in run-time
   • Create a directory in the root of USB thumbdrive named “verifier”
   • Insert the USB thumbdrive to the printer
   • The printer will start saving from the next verification XML report and failed label image if any to the USB thumbdrive.
   • Select **Remove USB** in USB menu in order to safely remove the USB thumbdrive.

Reporting and Statistics

In the **Webpage > Verification > Verification Results** you can see the list of the individual reports (if available).

You can also see the number of labels verified, failure rates, and print statistics.

### All Supported 1D Barcodes Overall Parameters

<table>
<thead>
<tr>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
</table>
| R Max                    | The highest reflectance in any element or quiet zone in a scan reflectance profile, or the highest reflectance of any sample area in a two-dimensional matrix symbol.  
Example: <RMax>79.2%</RMax>                                                                                   |
| R Min                    | The lowest reflectance in any element in a scan reflectance profile, or the lowest reflectance of any sample area in a two-dimensional matrix symbol.        
Example: <RMin Grade="4.0">0.5%</RMin>                                                                          |
| Min Edge Contrast        | The minimum difference between bar reflectance and space reflectance of two adjacent elements.                                                                                                           
Example: <ECMin Grade="4.0">67.2%</ECMin>                                                                     |
| Symbol Contrast          | The difference between the highest and lowest reflectance values in a scan reflectance profile.                                                                                                        
Example: <SymbolContrast Grade="4.0">84.0%</SymbolContrast>                                                  |
| Modulation               | The ratio of minimum contrast to symbol contrast.                                                                                                                                                    
Example: <Modulation Grade="4.0">80.0%</Modulation>                                                           |
| Defects                  | Irregularities found within elements and quiet zones, measured in terms of element reflectance non-uniformity.                                                                                           
Example: <Defects Grade="4.0">8.5%</Defects>                                                                  |
| Decodability             | A measure of the accuracy of its production in relation to the appropriate reference decode algorithm.                                                                                                    
Example: <Decodability Grade="4.0">76.5%</Decodability>                                                         |
| Decode                   | Decodable symbols shall comply with the symbology specification. Value in grade.                                                                                                                       
Example: <Decode Grade="4.0"/>                                                                                  |
| Quiet Zone               | The areas to the left and right of the barcode that is free from text or graphics to successfully read the barcode.                                                                                           
Example: <QuietZone Grade="4.0"/>                                                                               |
| Global Threshold         | The reflectance level midway between the maximum and minimum reflectance values in a scan reflectance profile, used for the initial identification of elements.                                         
Example: <GlobalThreshold>42.5%</GlobalThreshold>                                                               |
| Print Contrast Signal    | The contrast between bars and spaces or background.                                                                                                                                                      
Example: <PCS>99.4%</PCS>                                                                                       |
| Average Bar Gain         | Average bar gain or loss in percentage                                                                                                                                                                  
Example: <BarGain>-1.1%</BarGain>                                                                               |
## 2D Barcode, DataMatrix Overall Parameters

<table>
<thead>
<tr>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>R Max</strong></td>
<td>The highest reflectance in any element or quiet zone in a scan reflectance profile, or the highest reflectance of any sample area in a two-dimensional matrix symbol.</td>

<td>&lt;RMin&gt;16.8%&lt;/RMin&gt;</td>
</tr>
<tr>
<td><strong>Symbol Contrast</strong></td>
<td>The difference between the highest and lowest reflectance values in a scan reflectance profile.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;SymbolContrast Grade=&quot;4.0&quot;&gt;69.8%&lt;/SymbolContrast&gt;</td>
</tr>
<tr>
<td><strong>Modulation</strong></td>
<td>A measure of the uniformity of reflectance of the dark and light modules, respectively.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;Modulation Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>Reflectance Margin Grade</strong></td>
<td>A measure of how well each element of the symbol is correctly distinguishable as light or dark in comparison to the global threshold.</td>
</tr>
<tr>
<td><strong>Decode</strong></td>
<td>Decodable symbols shall comply with the symbology specification. Value in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;Decode Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>Axial Nonuniformity</strong></td>
<td>Measures the grades and spacing of the mapping centers (sampling points) or intersections of the grid and tests for uneven scaling of the symbol.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;AxialNonuniformity Grade=&quot;4.0&quot;&gt;1.9%&lt;/AxialNonuniformity&gt;</td>
</tr>
<tr>
<td><strong>Grid Nonuniformity</strong></td>
<td>Measures and grades the largest vector deviation of the grid intersections.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;GridNonuniformity Grade=&quot;4.0&quot;&gt;5.4%&lt;/GridNonuniformity&gt;</td>
</tr>
<tr>
<td><strong>Unused Error Correction</strong></td>
<td>Tests the extent to which regional or spot damage in the symbol has eroded the reading safety margin that error correction provides.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;UnusedEC Grade=&quot;4.0&quot;&gt;100.0%&lt;/UnusedEC&gt;</td>
</tr>
<tr>
<td><strong>Fixed Pattern Damage</strong></td>
<td>Tests the damage to the finder pattern, quiet zone timing, navigation, and other fixed patterns.</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;FixedPatternDamage Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>L1 (left of L finder)</strong></td>
<td>L1 in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;L1 Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>L2 (bottom of L finder)</strong></td>
<td>L2 in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;L2 Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>QZL1 (left quiet zone)</strong></td>
<td>QZL1 in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;QZL1 Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>QZL2 (bottom quiet zone)</strong></td>
<td>QZL2 in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;QZL2 Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td><strong>OCTASA (overall clock track and solid area)</strong></td>
<td>OCTASA in grade</td>
</tr>
<tr>
<td>Example:</td>
<td>&lt;OCTASA Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>

</table>
| AG (average grade)      | AG in grade  
Example:  
<AG Grade="4.0"/> |
| Contrast Uniformity     | The minimum MOD value found in any module contained in the data region of the symbol and does not affect the overall grade.  
Example:  
<ContrastUniformity>52.8%</ContrastUniformity> |
| Print Growth X          | Print growth X in percentage  
Example:  
<PrintGrowthX>9.3%</PrintGrowthX> |
| Print Growth Y          | Print growth Y in percentage  
Example:  
<PrintGrowthY>9.3%</PrintGrowthY> |
| MatrixSize              | Symbol size specified in Row x Column  
Example:  
<MatrixSize>16x16</MatrixSize> |
# 1D barcode 10 line Profile Grading Parameters

<table>
<thead>
<tr>
<th>Content</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Line ID</td>
<td>Scan line number for individual barcode. Number start from 1. Example: &lt;Line ID=&quot;1&quot;&gt;</td>
</tr>
<tr>
<td>Grade</td>
<td>Grading results for this barcode line Example: &lt;Grade&gt;3.3&lt;/Grade&gt;</td>
</tr>
<tr>
<td>R Max</td>
<td>The highest reflectance in any element or quiet zone in a scan reflectance profile, or the highest reflectance of any sample area in a two-dimensional matrix symbol. Example: &lt;RMax&gt;79%&lt;/RMax&gt;</td>
</tr>
<tr>
<td>R Min</td>
<td>The lowest reflectance in any element in a scan reflectance profile, or the lowest reflectance of any sample area in a two-dimensional matrix symbol. Example: &lt;RMin Grade=&quot;4.0&quot;&gt;0.2%&lt;/RMin&gt;</td>
</tr>
<tr>
<td>Min Edge Contrast</td>
<td>The minimum difference between bar reflectance and space reflectance of two adjacent elements. Example: &lt;ECMin Grade=&quot;4.0&quot;&gt;68.4%&lt;/ECMin&gt;</td>
</tr>
<tr>
<td>Symbol Contrast</td>
<td>The difference between the highest and lowest reflectance values in a scan reflectance profile. Example: &lt;SymbolContrast Grade=&quot;4.0&quot;&gt;83.3%&lt;/SymbolContrast&gt;</td>
</tr>
<tr>
<td>Modulation</td>
<td>The ratio of minimum edge contrast to symbol contrast. Example: &lt;Modulation Grade=&quot;4.0&quot;&gt;82.2%&lt;/Modulation&gt;</td>
</tr>
<tr>
<td>Defects</td>
<td>Irregularities found within elements and quiet zones; measured in terms of element reflectance. Example: &lt;Defects Grade=&quot;4.0&quot;&gt;6.2%&lt;/Defects&gt;</td>
</tr>
<tr>
<td>Decodability</td>
<td>A measure of the accuracy of its production in relation to the appropriate reference decode algorithm. Example: &lt;Decodability Grade=&quot;4.0&quot;&gt;75.5%&lt;/Decodability&gt;</td>
</tr>
<tr>
<td>Decode</td>
<td>Decodable symbols shall comply with the symbology specification. Value in grade. Example: &lt;Decode Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td>Quiet Zone</td>
<td>Quiet Zone. Value in grade. Example: &lt;QuietZone Grade=&quot;4.0&quot;/&gt;</td>
</tr>
<tr>
<td>Global Threshold</td>
<td>The reflectance level midway between the maximum and minimum reflectance values in a scan reflectance profile used for the initial identification of elements. Example: &lt;GlobalThreshold&gt;41.0%&lt;/GlobalThreshold&gt;</td>
</tr>
<tr>
<td>Print Contrast Signal</td>
<td>Print Contrast Signal (PCS) in percentage Example: &lt;PCS&gt;97.0%&lt;/PCS&gt;</td>
</tr>
<tr>
<td>Average Bar Gain</td>
<td>Average bar gain in percentage Example: &lt;BarGain&gt;3.0%&lt;/BarGain&gt;</td>
</tr>
</tbody>
</table>
Restore Default Verification Files

You can restore the default verification database and remove all failed label image files in order to free up the memory through the following interfaces:

- PrintSet 5
- Web page
- LCD

To restore the default verification database:

1. Go to Webpage > Services > Restore Defaults > Verification Files
2. Click Restore

Fingerprint Command

To show verification results/record summary on standard I/O or label after the last verification database been reset.

VERIFIER RESULT [PRINT]

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PRINT</td>
<td>To print the summary on the label</td>
</tr>
</tbody>
</table>

Send this command to retrieve summary of verification results. A typical result might be:

- Verified: 104 labels
- Failed: 3 labels
- Failure Rate: 2.9%

To get the summary printed on the label:

**VERIFIER > RESULT > PRINT**

This Fingerprint command reads system array or setting system variables for Verifier status retrieving.

Syntax: SYSVAR(<nexp>)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt;nexp&gt;</td>

</table>
### About Data Reporting

There are multiple ways to export data from the PX940, either manually or automatically.

The table below show the various interfaces and their capabilities.

<table>
<thead>
<tr>
<th>Report</th>
<th>Web Page</th>
<th>FTP Push</th>
<th>USB Drive</th>
<th>Verifier Integration Interface (VII)</th>
</tr>
</thead>
<tbody>
<tr>
<td>XML Report (Individual)</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>CSV Report (Multiple)</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>Last Image</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>Yes</td>
</tr>
<tr>

<td>Yes</td>
<td>No</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>High Level Statistics</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
</tbody>
</table>

### Verification Report Level

Report levels and details can be configured in Verification Settings > Verification > Report Level.

**Note:** When the report level setting is changed, the existing database will reset and delete all old reports, to ensure maximum performance.

There are five report levels:

<table>
<thead>
<tr>
<th>Report Level</th>
<th>Label Info and Grade</th>
<th>Barcode Info and Grade</th>
<th>Barcode ISO Parameters</th>
<th>10 Line Data (1D)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>No</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>2</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>3</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
<td>No</td>
</tr>
<tr>
<td>4 (default)</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>5</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Note:** If you are using the verifier in Read/No Read mode, the maximum level available is report Level 3. If configured to Level 4 or 5, it will fall back to Level 3.

### Verification Report Format

The PX940 printer provides two main formats for reporting verification results. For both types, the level of details is based on the Report Level setting.

<table>
<thead>
<tr>
<th>No.</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>106</td>
<td>Read Label Verification Result</td>
<td>Read label verification result&lt;br&gt;0 = Label verification pass&lt;br&gt;Non-Zero = Label verification failed, and error code is returned.</td>
</tr>
</tbody>
</table>
1. XML: a report for each individual label, ideal for frequent exporting.
   - Supports Levels 2, 3, 4, and 5
   - Can be exported from web page, FTP/SFTP, and USB
   - Easy to read
   - Ideal for troubleshooting as it is the only format that supports Level 5 reporting.

2. CSV: an overview of multiple results, consolidated into a report for all of the results currently stored in the printer verification database.
   - Supports Levels 2, 3, and 4
   - Best viewed in Excel
   - Requires less space than XML
   - Great for creating trend graphs on overall grade or individual parameters, creating statistics to track printer behavior, quality, and issues in production.

### Web Page Reporting

You can conduct reporting from the printer web page.

1. Web Page Export
   - From web page the export of data is always manual and require manual delete
   - CSV (summary) support level 2-4
   - XML (individual) supports level 2-5

2. Last Report
   - Last individual report is stored in http://<printer IP>/tmp/
     last_saved_report.xml
   - Last individual scan image is stored in http://<printer IP>/tmp/
     last_saved_image.bmp
   - Last individual scan image can be viewed in web page: Verification → Verifier Image

3. Failed Images (only if option is enabled)
   - All failed images and reports from database are stored in /home/user/
     verifier/images
   - If thumb drive is inserted with /verifier/ folder then nothing will be stored in
     /home/user/

4. Statistics
   - Report the number of passed and failed labels currently in database
     (non-accumulative)
You can configure the printer to automatically push XML/CVS reports to an external FTP/SFTP server. You can configure and transfer the interval once the report has been transferred to the server, it will be deleted from the database.

**Note:** To transfer data to a specific folder on the server, it has to be configured through the FTP/SFTP server settings. The printer does not support selecting a specific folder.

To enable the FTP/SFTP feature on the web page, you have to input the FTP/SFTP server IP address, FTP/SFTP user name and password, the interval to transfer reports, and report format (XML or CSV)
Note: To disable the FTP/SFTP feature, set the IP address to 0.0.0.0

About USB Reporting

There are two methods to conduct USB reporting:

1. Automatic export
   • To enable automatic reporting to a folder, "/verifier/" must be present in the thumb drive
   • Report are in XML format, Report Level 2-5
   • All failed images and failed reports in database, stored in /verifier/, ‘Save Failed Images’ is enabled
   • If a USB is inserted, nothing will store in /home/user/verifier/images

   Note: The automatic exporting of reports does not delete data from the database.

2. Manual export
   • Access from USB menu in LCD
   • Printer will create folder /Verifier/ in the thumb drive and export all files to there
   • Reports are in XML format, Report Level 2-5
   • All failed images in /home/user/verifier/images will be exported as well
   • You must manually delete results after exporting (e.g. restore defaults, selecting ‘Verification Files’ only)
About LCD Reporting

**LCD Reporting – During Verification**

**LCD Reporting-Barcode Result**

LCD Reporting provides a high level of information for each barcode when the Report Level is set to Level 3 or higher.

To view the LCD Reporting – Barcode Result, go to **Tools > Results**.
System Information

Look in the System Information tab on the printer web page for useful information and statistics on the printer hardware and firmware.

Statistics

Use the printer web page to view important statistics about your printer.

<table>
<thead>
<tr>
<th>Statistic Type</th>
<th>Information Available</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Information</td>
<td>Printer uptime and CPU usage, firmware and kernel versions, printer configuration and serial numbers, flash and RAM memory information</td>
</tr>
<tr>
<td>Supply</td>
<td>Printhead and ribbon information</td>
</tr>
<tr>
<td>Hardware Options</td>
<td>Input/output devices, serial port information</td>
</tr>
<tr>
<td>Network Interfaces</td>
<td>MAC address, TCP/IP, Bluetooth LE, and 802.11 network information</td>
</tr>
<tr>
<td>Font Information</td>
<td>Name, type, location, and size of installed fonts</td>
</tr>
<tr>
<td>Barcode Information</td>
<td>Name and type of installed barcode fonts</td>
</tr>
<tr>
<td>Image Information</td>
<td>Name, type, location, and size of installed images</td>
</tr>
</tbody>
</table>

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press Enter. The printer web page appears.
3. Click the System Information tab.
4. Click Statistics > System Information. The System Information page appears.
5. For more detailed statistics, click another choice in the Statistics list.
Printer Odometer

You can check the odometer from the printer web page to see the printhead usage and how the current values compare to the alert values.

**Note:** To check the printer odometer from the web page, the printer must be turned on and connected to your network.

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press **Enter**. The printer home page appears.
3. Click the **System Information** tab.
4. Select **Odometer**. The list of current odometer statistics appears.

Maintenance Alerts

To help maintain the printer, you can configure the printer to send alert messages when certain conditions occur. For example, the printer can send a message when the odometer reaches a certain value, or if the printhead is lifted during printing.

There are three types of alerts:

- Error alerts
- Information alerts
- Warning alerts

You configure alert settings in the printer web page. Alert messages can be sent to an email address, an SNMP trap, or both. You can enable or disable each type of alert, set the number of times the alert is repeated, set the unit of measure that determines how often the alert is sent, and change the default text message for the alert.

Set Alerts

You can set maintenance alerts to determine the threshold or value at which an alert is sent to you.

1. Open a web browser on your PC.
2. In the address bar, type the IP address of your printer and press **Enter**. The printer web page appears.
3. Click **Login**. The Login page appears.
4. Type your Username and Password and then click Login. The default value for Username is **itadmin** and the default value for Password is **pass**.
5. Click the **Configure** tab. The Configuration Summary page appears.
6. Click **System Settings > Maintenance Alerts**. The Maintenance Alerts settings page appears.
7. Type the values you want to set for each maintenance alert.
8. Click **Save** when you are finished.

**Alert Notifications**

The way you receive error alerts is determined by the notification method you configure. You can choose between receiving notifications by SNMP trap, email, or SNMP trap + email.

- From the printer Main Menu, select **Settings > System Settings > General > Alert Notification Method**.

Or

- From the printer web page, login and then click the **Configure tab > System Settings > General > Alert Notification Method**.
# Error Alerts and Solutions

Use these tables to understand and troubleshoot some common error alerts you may receive and how to fix them.

<table>
<thead>
<tr>
<th>Error Alert</th>

</table>
### Verifier Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| **The printer is connected to a serial port on the PC but the printer is not working.** | Try these possible solutions:  
  - Make sure the serial port settings are configured correctly.  
  - Make sure the serial cable pinouts are correct and that the cable is not damaged.  
  - If you have the Windows driver for an RS-232 printer installed on your PC, uninstall the driver. |
| **The printer boot up time is slower than before.** | Try these possible solutions:  
  - Remove the USB device or use a new (blank) USB  
  - The printhead may be failing. If part of the dotted line is missing, replace the printhead |

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Inconsistent barcode grading</strong></td>
<td>Avoid interfering with the printed media during verification</td>
</tr>
</tbody>
</table>
| **Poor grading**                             | Try these possible solutions in order:  
  - Clean the verifier glass and printhead  
  - Calibrate the verifier |
| **Voiding good labels**                      | Adjust the verification passing grade |
| **Verifier is not functioning**              | Check if the verification type is set to Read/No Read or ISO 15415/15416 |
| **Rmax is low**                              | Try these possible solutions in order:  
  - Check the quality of the media  
  - Use lighter non-glossy media |
| **Minimum Edge Contrast low grading**        | Try these possible solutions in order:  
  - Use a lighter, non-glossy media  
  - Increase barcode size-X dimension |
| **Symbol contrast low grading**              | Try these possible solutions in order:  
  - Make sure that your print quality setting is appropriate for the type of media that you are using.  
  - The printhead pressure may be too low; increase printhead pressure  
  - Typical Rmin value for Direct Thermal media is 10-20% and Thermal Transfer media is less than 5% |
| **Modulation low grading**                   | Try these possible solutions in order:  
  - Use a lighter, non-glossy media  
  - Increase barcode size-X dimension |
| **Defects low grading**                      | Try these possible solutions in order:  
  - Make sure that your print quality setting is appropriate for the type of media that you are using.  
  - The printhead pressure may be too low; increase printhead pressure  
  - There may be foreign particles on the media. Clean or replace the media  
  - The printhead may be dirty. Clean the printhead. |
| **Decodability low grading**                 | Make sure that your print quality setting is appropriate for the type of media that you are using. |
Networking Problems

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Solution</th>
</tr>
</thead>
</table>
| The Ethernet or wireless network connection is not working correctly | Try these possible solutions:  
  - Make sure your network cable is securely connected to your printer and a straight pin-to-pin cable, not a crossover cable.  
  - Make sure your PC is correctly configured for and connected to your network.  
  - Make sure your printer is correctly configured for your network. |

Restore Printer Defaults

To restore factory defaults on the printer, use the printer web page or the Main Menu on the printer. From the printer web page and the Main Menu, you can choose to restore default network settings, keep or delete user-installed files, and to restore all system settings.

Restore Defaults from the Printer Web Page

Restore your printer’s defaults from the printer web page if you are connected to a Wi-Fi or Ethernet network.

1. Start a web browser on your desktop PC.
2. In the address field, type the printer IP address and press Enter. The printer web page appears.
3. Click Login in the upper right corner of the screen. The Login page appears.
4. Type your Username and Password in the text fields and click Login.
5. Select Services > Restore Defaults. The Restore Defaults menu appears with none of the check boxes selected.
6. To restore all default settings, select all of the check boxes and then click Restore. You can also restore only the defaults for specific settings:
   - To restore the current network settings, select the Network settings check box.
   - To restore all applications, fonts, and other files you have installed on the printer, select the User files check box.
   - To restore all current system settings, select the System Settings check box.
   - To delete all verification results, select the Verification Files check box.
7. When you receive a message to reboot the printer on your desktop PC, click OK and restart the printer.

Problem | Possible Solution
---|---
The Ethernet or wireless network connection is not working correctly | Try these possible solutions:  
  - Make sure your network cable is securely connected to your printer and a straight pin-to-pin cable, not a crossover cable.  
  - Make sure your PC is correctly configured for and connected to your network.  
  - Make sure your printer is correctly configured for your network.
Restore Defaults from the Main Menu

Restore the printer’s defaults from the Tools menu.

1. From the Ready screen, open the Main Menu.
2. Select Tools > Restore Defaults. The Restore Defaults menu appears with all items in the list selected by default.
3. To restore all default settings, continue with the next step. You can also change the settings that are restored as follows:
   - To keep the current network settings, clear the Network settings check box.
   - To keep all applications, fonts, and other files you have installed on the printer, clear the User files check box.
   - To keep all current system settings, clear the System Settings check box.
   - To keep verification results, clear the Verification Files check box.
4. Tap the right arrow and, when prompted, tap Yes to restore default settings and reboot. A confirmation message appears.
5. To return to the Main Menu without restoring the default settings, select No. To return to the Restore Defaults list without restoring any defaults, select Cancel.

Restore Defaults with a Hardware-Based Reset

Restore the printer defaults by performing a hardware-based reset.

1. Turn the printer off and open the media cover.
2. Turn the printhead lift lever counterclockwise to raise the printhead.
3. Turn the printer on while pressing and holding the Feed button.
4. Release the Feed button when the status bar is nearly full.
5. All the settings are restored on the printer.
6. Turn the printhead lift lever clockwise to lower the printhead and close the media cover.

Upgrade the Printer Firmware

Check for periodic updates to the printer firmware. The latest version of the firmware is available from the Honeywell Technical Support Downloads portal (https://hsmftp.honeywell.com). Go to Software > Printers > Industrial > PX940A PX940V > Current > Firmware)

You can upgrade the printer firmware using:
- The printer web page, a USB storage device, or PrintSet 5

Note: After you upgrade the printer firmware, restore the default settings and calibrate the media sensors.
Upgrade Firmware from the Printer Web Page

1. Start a web browser on your desktop PC.
2. In the address field, type the printer IP address and press Enter. The printer web page appears.
3. Click Login in the upper right corner of the screen. The Login page appears.
4. Type your Username and Password in the text fields and click Login.
5. Click the Services tab and select Firmware Upgrade. The Firmware Upgrade screen appears, showing the current firmware version.
6. Click Browse to locate the upgrade file. Select it and click Open.
7. Click Upgrade. The printer web page shows that it is upgrading firmware on your printer.

Upgrade Firmware from a USB Storage Device

Place the upgrade file in the root directory on the USB storage device.

Note: For best results, use a USB storage device that contains no other files besides the upgrade file.

1. Copy the firmware upgrade file to the root directory of the USB storage device.
2. Turn the printer off.
3. Insert the USB storage device into a USB host port.
4. Restart your printer. An upgrading firmware message appears as the upgrade file is loaded into the printer memory. This process may take a few minutes.
5. Remove the USB storage device.
Clean the Printer

**Warning:** Disconnect the power cord from the socket-outlet before installing user-service parts in the printer.

To properly maintain the printer, you should clean it regularly. You can clean these parts of the printer:

- Printhead
- Platen roller
- Media guides
- Media path
- Verifier
- Exterior of the printer

**Caution:** To avoid possible personal injury or damage to the printer, never insert any pointed or sharp objects into the printer.

**Caution:** Use only the cleaning agents specified in this section. Honeywell is not responsible for damage caused by any other cleaning materials used on this printer.

**Caution:** Isopropyl alcohol is a highly flammable, moderately toxic, and mildly irritating substance.

Follow these guidelines for cleaning the printer:

- Always remove the power cord before cleaning.
- Never spray the printer with water. Protect it from water when cleaning the premises.

**Caution:** Do not spray the printer with water. If you are using a hose to clean the premises in an industrial environment, remove the printer or protect it carefully from spray and moisture.
Clean the Printhead

**Warning:** The printhead/motor may be hot. Allow the printhead/motor to cool.

Cleaning the printhead on a regular basis is important for the life of the printhead and for the print quality.

**Note:** Honeywell recommends cleaning the printhead each time you replace the media.

Follow this procedure to clean the printhead using the cleaning card. If you need to clean additional residue from the platen roller or tear bar, use a cotton swab moistened with isopropyl alcohol.

**Caution:** Carefully read the warning text on the envelope before using the cleaning card.

**Caution:** Never use any sharp tools for removing stuck labels. The printhead and rollers are delicate.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Insert most of the cleaning card under the printhead, and then lower the printhead.
5. Pull out the cleaning card and raise the printhead.
6. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
7. Repeat Steps 4 through 6 if necessary.
8. If necessary, clean residue from the platen roller or tear bar with a cotton swab moistened with isopropyl alcohol.
9. Once the parts are dry, replace the media (and ribbon) in the printer.
10. Close the media cover, reconnect power, and turn on the printer.

Warning: The printhead/motor may be hot. Allow the printhead/motor to cool.

![CAUTION HOT SURFACE DO NOT TOUCH]

Cleaning the printhead on a regular basis is important for the life of the printhead and for the print quality.

**Note:** Honeywell recommends cleaning the printhead each time you replace the media.

Follow this procedure to clean the printhead using the cleaning card. If you need to clean additional residue from the platen roller or tear bar, use a cotton swab moistened with isopropyl alcohol.

**Caution:** Carefully read the warning text on the envelope before using the cleaning card.

**Caution:** Never use any sharp tools for removing stuck labels. The printhead and rollers are delicate.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Insert most of the cleaning card under the printhead, and then lower the printhead.
5. Pull out the cleaning card and raise the printhead.
6. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
7. Repeat Steps 4 through 6 if necessary.
8. If necessary, clean residue from the platen roller or tear bar with a cotton swab moistened with isopropyl alcohol.
9. Once the parts are dry, replace the media (and ribbon) in the printer.
10. Close the media cover, reconnect power, and turn on the printer.

Warning: The printhead/motor may be hot. Allow the printhead/motor to cool.

**Caution:** Carefully read the warning text on the envelope before using the cleaning card.

**Caution:** Never use any sharp tools for removing stuck labels. The printhead and rollers are delicate.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Insert most of the cleaning card under the printhead, and then lower the printhead.
5. Pull out the cleaning card and raise the printhead.
6. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
7. Repeat Steps 4 through 6 if necessary.
8. If necessary, clean residue from the platen roller or tear bar with a cotton swab moistened with isopropyl alcohol.
9. Once the parts are dry, replace the media (and ribbon) in the printer.
10. Close the media cover, reconnect power, and turn on the printer.

Warning: The printhead/motor may be hot. Allow the printhead/motor to cool.

![CAUTION HOT SURFACE DO NOT TOUCH]

Cleaning the printhead on a regular basis is important for the life of the printhead and for the print quality.

**Note:** Honeywell recommends cleaning the printhead each time you replace the media.

Follow this procedure to clean the printhead using the cleaning card. If you need to clean additional residue from the platen roller or tear bar, use a cotton swab moistened with isopropyl alcohol.

**Caution:** Carefully read the warning text on the envelope before using the cleaning card.

**Caution:** Never use any sharp tools for removing stuck labels. The printhead and rollers are delicate.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Insert most of the cleaning card under the printhead, and then lower the printhead.
5. Pull out the cleaning card and raise the printhead.
6. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
7. Repeat Steps 4 through 6 if necessary.
8. If necessary, clean residue from the platen roller or tear bar with a cotton swab moistened with isopropyl alcohol.
9. Once the parts are dry, replace the media (and ribbon) in the printer.
10. Close the media cover, reconnect power, and turn on the printer.
Clean the Front Sensor (PX940A)

Both the upper and lower of front sensor are transparent to allow light to pass between the two parts of the label gap and label mark sensors. It is important to keep these surfaces free of dust, stuck labels, and adhesive residue.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Lift the front sensor arm and clean both the upper and lower of front sensor with a soft, lint-free cloth soaked in isopropyl alcohol.
4. Once the parts are dry, close the front sensor.

Clean the Verifier (PX940V)

Clean the verifier at the end of every roll of media to accurately verify the barcode. It is important to keep the verifier surface free of dust, stuck labels, and adhesive residue.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Lift the verifier arm and clean the glass with a soft, lint-free cloth soaked in isopropyl alcohol.
4. Once the parts are dry, close the verifier arm and reconnect power to the printer.

Clean the Media Path

Both the upper and lower media guides are transparent to allow light to pass between the two parts of the label gap and label mark sensors. It is important to keep these surfaces free of dust, stuck labels, and adhesive residue.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Insert a cleaning card or a soft cloth soaked in isopropyl alcohol between the two media guides to clean them.
5. Wait for approximately 30 seconds to allow the cleaning fluid to dissolve the residue.
6. Once the parts are dry, replace the media (and ribbon) in the printer.
7. Close the media cover, reconnect power, and turn on the printer.
Clean the Exterior of the Printer

Keep the exterior of the printer clean. Maintaining a clean exterior will reduce the risk of dust or foreign particles reaching the inside of the printer and affecting printer function.

Use a soft cloth moistened with water or a mild detergent when cleaning the printer exterior. Keep the surface surrounding the printer clean as well.

Replace the Printhead

You need to replace the printhead periodically when it wears out due to the rapid heating and cooling process used during printing. How often you need to replace the printhead depends on factors such as what type of images you print, the type of media or ribbon you use, the amount of energy to the printhead, the print speed, and the ambient temperature of the room you print in. The firmware detects the new printhead when you restart the printer.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media and ribbon (if installed).
4. Turn the printhead lift lever counterclockwise to raise the printhead.
5. Pull down the Front Sensor(PX940A)/Verifier(PX940V).
6. Move the inside toggle and outside toggle to the center of printhead.

**Note:** Use a long screwdriver and the guiding holes to access the screws.

7. Use the screw driver to loosen the left and right screws.
8. Disconnect the two cables from the printhead as you remove it from the printer.
9. Connect the two printhead cables to the new printhead.
10. Insert the new printhead to the bracket into the printer.
11. Turn the printhead lift lever clockwise to close it.
12. Fasten the left and right screw.
13. Lock the Front Sensor(PX940A)/Verifier(PX940V) module back to the printer.
14. Replace the media (and ribbon) in the printer.
15. Close the media cover, reconnect power, and turn on the printer.

Replace the Platen Roller

If the printer platen roller gets damaged or wears out, it may need to be replaced.

1. Turn the printer off and disconnect the printer from power.
2. Open the media cover.
3. Remove the media.
4. Turn the printhead lift lever counterclockwise to raise the printhead.
5. Pull out the verifier or front sensor knob toward the outside.
6. Pull down the front sensor (on PX940A model) or the verifier module (on PX940V model) toward the front side.
7. Rotate the platen roller latch clockwise to detach it from the printer and pull the
   platen roller away from the printer.

8. Insert the new platen roller and slide it into the printer.
9. Lock the platen roller by rotating the latch clockwise.

Label Taken Sensor Calibration

If your printer has the optional label taken sensor or the label dispenser (which
includes the sensor), use the wizard to calibrate the sensor for your media.

*Note:*  *For best results, calibrate the sensor each time you load media or move the printer to
a different environment. If you installed the label taken sensor module or the label
dispenser in the printer, calibrate the sensor before you begin printing.*

Before you calibrate the sensor, load media and ribbon in the printer as necessary.

1. In the Main Menu, select **Wizards > Calibration > Label Taken Sensor.**
2. Follow the prompts to calibrate the sensor.

Label Gap and Black Mark Sensor Adjustments

The label gap sensor is a transmissive sensor that controls how the printer feeds
media by detecting gaps between the labels. The black mark sensor is a reflective
sensor that detects black marks on continuous media.

The sensor contains a blue LED that is strong enough to see through media. You
can use the blue LED to help determine the proper location for the sensor.

1. Open the media cover.
2. Adjust the label gap and black mark sensor:
• Turn the sensor adjustment knob counterclockwise to move the sensor toward the outside of the printer.
• Turn the sensor adjustment knob clockwise to move the sensor toward the inside of the printer.

3. Close the media cover.
CHAPTER 8

PRODUCT SPECIFICATIONS

Printer and Environmental Specifications

2. Navigate to PX940 product page.
3. Locate the **Products** tab.
4. Click on your printer model.
5. Select one of the following tabs:
   - **Specifications**
     Printer specifications are listed here.
   - **Documents**

Command Languages and Simulator Support Features

- Autosense
- Fingerprint
- Direct Protocol
- IPL
- ZSim
- DPL
- Smart Printing C#

Print Sensors

- Dual label gap/tag notch
- Black mark
- Printhead lift
• Media low
• Ribbon present/end
• Ribbon low
• Front arm lift
• Label taken (optional)

**Network Services**

• FTP
• SFTP
• HTTP/HTTPS
• SNMP v1/2c
• SNMP client support for IPv4 and IPv6
• WINS for IPv4
• BOOTP for IPv4
• DNS client support for IPv4 and IPv6
• Line Printer Protocol
• Raw TCP (Telnet in/out)
• DHCP client for IPv4 and IPv6 network (dual stack)
• IPv4 and IPv6
• Ping
• IPSEC/IKEv2 over IPv6
• SSH
• NTP
• Supports 10/100Mbps Ethernet (10BASE-T, 100BASE-T)
• Sentience

**Fonts**

**Resident Fonts**

• Andale Mono
• Andale Mono Bold
• CG Times
• CG Times Bold
• CG Triumvirate Condensed Bold
Downloadable Fonts

For broader language and character support, any Unicode TrueType or TrueType-based OpenType font may be downloaded. Fonts from Monotype Imaging are recommended to address global languages. The fonts below have been tested and are available for purchase and download at www.fonts.com.

WorldType Collection fonts support all global languages whereas the other fonts listed support specific languages.

- Angsana New Regular
- Helvetica World
- MSung PRC Medium
- MSung HK Medium
- HYGothic-Medium
- TBMinPro-Light
- NarkisClassicMF
- WorldType Collection J
- WorldType Collection K
- WorldType Collection S
- WorldType Collection T
Supported Font Types

- TrueType
- OpenType
- Bitmap

Printed Barcode Symbologies

1D Barcode Symbologies

## Communications Settings

### Serial Port

The printer must be connected to the PC through a serial port to view the settings:

- From the printer Main Menu, select **Settings > Communications > Serial > COM1**.
- From the printer web page, click the **Configure** tab. Go to **Communications > Serial**.

<table>
<thead>
<tr>
<th>Serial Port Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baud Rate</td>
<td>Transmission speed in bits per second (bps) for the serial port.</td>
<td>115200</td>
</tr>
<tr>
<td>Data Bits</td>
<td>Number of bits that define a character or byte.</td>
<td>8</td>
</tr>
<tr>
<td>Parity</td>
<td>Specifies how the printer checks the integrity of the transmitted data.</td>
<td>None</td>
</tr>
<tr>
<td>Stop Bits</td>
<td>Number of bits sent at the end of every character to allow the receiving signal hardware to detect the end of a character and to resynchronize with the character stream.</td>
<td>1</td>
</tr>
<tr>
<td>Hardware</td>
<td>Specifies if hardware flow control (RTS/CTS) is used to manage the rate of data transmission between the device and the host.</td>
<td>Disable</td>
</tr>
<tr>
<td>ENQ/ACK</td>
<td>Specifies if software flow control (ENQ/ACK) is used to manage the rate of data transmission between the device and the host.</td>
<td>Disable</td>
</tr>
<tr>
<td>XON/XOFF To</td>
<td>Specifies if software flow control (XON/XOFF) is used to manage the rate of data transmission to the host.</td>
<td>Disable</td>
</tr>
<tr>
<td>XON/XOFF From</td>
<td>Specifies if software flow control (XON/XOFF) is used to manage the rate of data transmission from the host.</td>
<td>Disable</td>
</tr>
<tr>
<td>New Line Character</td>
<td>Defines the characters that the printer echoes to the host to indicate that it has moved to a new line.</td>
<td>CR/LF</td>
</tr>
</tbody>
</table>
Ethernet

To view these settings:

- From the printer Main Menu, select **Settings > Communications > Ethernet**.
- From the printer web page, click the **Configure** tab. Go to **Communications > Ethernet**.

<table>
<thead>
<tr>
<th>Ethernet Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>(IPv4) IP Assignment Method</td>
<td>Specifies how the printer obtains an IP address.</td>
<td>DHCP</td>
</tr>
<tr>
<td>(IPv4) IP Address</td>
<td>Specifies the unique network-level address that is assigned to each device in a TCP/IP network (IPv4).</td>
<td>0.0.0.0</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Specifies a number that defines the range of IP addresses that can be used in a TCP/IP network.</td>
<td>0.0.0.0</td>
</tr>
<tr>
<td>Default Router</td>
<td>Specifies the IP address of a router that is used when a device sends a packet to another subnet or to an unknown destination.</td>
<td>0.0.0.0</td>
</tr>
<tr>
<td>DHCP Response</td>
<td>Specifies if the printer receives DHCP responses by broadcast or unicast.</td>
<td>Broadcast</td>
</tr>
<tr>
<td>(IPv6) IP Assignment Method</td>
<td>Specifies how the printer obtains an IP address (for IPv6 networks).</td>
<td>Automatic</td>
</tr>
<tr>
<td>(IPv6) IP Address</td>
<td>Specifies the unique network-level address that is assigned to each device in a TCP/IP network (IPv6).</td>
<td>Automatic</td>
</tr>
</tbody>
</table>

Bluetooth Settings

To view these settings:

- From the printer Main Menu, select **Settings > Communications > Bluetooth**.
- From the printer web page, click the **Configure** tab. Go to **Communications > Bluetooth**.

<table>
<thead>
<tr>
<th>Bluetooth Setting</th>
<th>Description</th>

<td>Description</td>
<td>Default</td>
</tr>
<tr>
<td>----------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------</td>
</tr>
<tr>
<td>Media Length</td>
<td>Sets the length of the printable area measured from one edge of the label to the edge that is closest to the printhead. Unit of measurement is defined in the Unit of Measurement parameter.</td>
<td>Variable</td>
</tr>
<tr>
<td>Clip Default</td>
<td>Determines if the printer prints items outside the printable area of the label. When this is set to Off, the printer returns an error if any part of a barcode label cannot be printed because that part extends beyond the printable area. When this is set to On, the printer prints all barcode labels, but may also print unreadable, incomplete labels.</td>
<td>Off</td>
</tr>
<tr>
<td>Print Mode</td>
<td>Selects the printer tear off, peel off, or rewind media mode</td>
<td>Tear Off</td>
</tr>
<tr>
<td>Peel Strength</td>
<td>Selects strength the printer uses to peel the label off from liner. Use Medium or High if the printer has trouble to peel certain types of media.</td>
<td>Low</td>
</tr>
<tr>
<td>Label Top Adjust</td>
<td>Sets the length of media the printer feeds (positive value) or retracts (negative value) before printing a label. Unit of measurement is defined in the Unit of Measurement parameter. Range is -9999 to +9999.</td>
<td>0</td>
</tr>
<tr>
<td>Label Reset Adjust</td>
<td>Sets the length of media the printer feeds (positive value) or retracts (negative value) after printing a label. Unit of measurement is defined in the Unit of Measurement parameter. Range is -9999 to +9999.</td>
<td>0</td>
</tr>
<tr>
<td>Media Calibration Mode</td>
<td>Selects the mode the printer uses to calibrate media. Use Slow if the printer has trouble identifying gaps or marks in media. Use Fast with Retraction or Slow with Retraction to retract the media and ribbon fed for calibration back to the printer.</td>
<td>Slow</td>
</tr>
<tr>
<td>Length (Slow Mode)</td>
<td>If Media Calibration Mode is set to Slow, the printer prints the media length plus 10 mm. This value sets an additional amount of media to be printed. Unit of measurement is defined in the Unit of Measurement parameter. Range is 0 to 3200.</td>
<td>0</td>
</tr>
<tr>
<td>LTS Sensitivity Level</td>
<td>Sets the sensitivity of the label taken sensor.</td>
<td>0</td>
</tr>
<tr>
<td>Power Up Action</td>
<td>Sets the action when you turn the printer on: No Action Form feed: The printer feeds one label. Test feed: The printer prints two configuration labels as it calibrates the media sensors. Smart Calibration: Detects media type (gap, black mark, or continuous), detects printing method (ribbon or no-ribbon), and calibrates media length.</td>
<td>Smart Calibration</td>
</tr>
</tbody>
</table>
Note: If no action is selected for Head Down Action, then you need to align the media gap, black mark, hole, and notch with the tear bar before you close the printhead at Thermal Transfer printing mode. Otherwise, the first label may be printed by the used ribbon.

### Print Quality Settings

To view these settings:

- From the printer Main Menu, select **Settings > Printing > Print Quality**.
- From the printer web page, click the **Configure** tab. Go to **Printing > Print Quality**.

<table>
<thead>
<tr>
<th>Print Quality Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print Speed</td>
<td>Sets how fast the printer prints labels. The unit of measure is defined in the Unit of Measure parameter.</td>
<td>200dpi:100 300dpi:100 600dpi: 50</td>
</tr>
<tr>
<td>Media Sensitivity</td>
<td>Sets the level of sensitivity of the media to the printhead heat for media and ribbon.</td>
<td>High</td>
</tr>
<tr>
<td>Darkness</td>
<td>Sets the image darkness for media and ribbon. Adjust this parameter with the Media Sensitivity parameter. Range is 1 to 100.</td>

**Note:** PX940 printers are Energy Star qualified, but require the brightness set to Low and power consumption may vary in actual application with Applicator Board or Industrial Interface Board. Energy Star is qualified only for Non-Applicator or Non-Industrial Interface.

System I/O

To view these settings:

- From the printer Main Menu, select **Settings > System Settings > Manage I/O**.
- From the printer web page, click **Configure > System Settings > Manage I/O**.

<table>
<thead>
<tr>
<th>System I/O Setting</th>

</tr>
</tbody>
</table>
System Network Services

Note: You will only see Manage Services from the menus if you have an Ethernet or Wireless module installed in the printer.

Note: The printer supports 10/100 Mbps Ethernet (10BASE-T, 100BASE-T)

To view these services:
- From the printer Main Menu, select Settings > System Settings > Manage Services.
- From the printer web page, go to Configure > System Settings > Manage Services.

## Verifier Settings

<table>
<thead>
<tr>
<th><strong>Verifier Setting</strong></th>
<th><strong>Description</strong></th>
<th><strong>Default</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Verification Type</strong></td>
<td>Select the verification type to check the barcode. None - No barcode validation  Read/No Read - Validate if barcode is readable  ISO15415/15416 - Full ANSI grading of barcode</td>
<td>ISO15415/15416</td>
</tr>
<tr>
<td><strong>Passing Grade</strong></td>
<td>Sets the minimum passing grade for barcode grading. Grade 0.0 (F) is the lowest grade. Grade 1.5 (C) is the default and recommended by ISO standard. Only applied when verification type is set to ISO15415/15416.</td>
<td>1.5 (C)</td>
</tr>
<tr>
<td><strong>Aperture</strong></td>
<td>Indicates the aperture size (in mils) used for verification. Aperture size will be chosen automatically based on ISO standard. Change only if required by an overriding application.</td>
<td>Automatic</td>
</tr>
<tr>
<td><strong>Max Consecutive Failures</strong></td>
<td>Sets maximum number of times printer encountered verification failure consecutively before prompting for user action. This setting is only applicable when the Verification Failure Action is set to Void and Reprint.</td>
<td>3</td>
</tr>
<tr>
<td><strong>Verifier Failure Action</strong></td>
<td>Indicates action to take when label fails verification. Void and Reprint (default) - Retract and void the failed label, then reprint the failed label. Stop reprint if the maximum consecutive failures have been reached. Ignore and Continue - No voiding when verification fails. Result is saved and next label is printed. Note: During multiple label printing, printer will void the failed label (plus all printed and yet to be verified labels) in order to keep the good labels in sequence.</td>
<td>Void and Reprint</td>
</tr>
<tr>
<td><strong>Save Failed Label Images</strong></td>
<td>When enabled, the printer saves all failed label images in non-volatile memory. Maximum 100 images can be saved (if memory available). At maximum capacity oldest image file will be replaced by newest.</td>
<td>Enable</td>
</tr>
<tr>
<td><strong>Void Pattern</strong></td>
<td>Select the void pattern type to mark the failed label.</td>
<td>Diamond</td>
</tr>
<tr>
<td><strong>Reprint Mode</strong></td>
<td>Indicates reprint action to take when label fails verification. Sequential - Void the good labels if needed to keep good labels in the same order as sent to the printer. Non Sequential - Void only the failed label. The good labels may not presented in order.</td>
<td>Non-Sequential</td>
</tr>
<tr>
<td><strong>Grading Override</strong></td>
<td>When enabled, the user is allowed to decide to accept the failed label (below the grading threshold) when prompt for user action when maximum consecutive failures count is reached.</td>
<td>Disabled</td>
</tr>
</tbody>
</table>
Data Exporting Settings

<table>
<thead>

## Maintenance Alerts

To view these settings:

- From the printer Main Menu, select **Settings > System Settings > Maintenance Alerts.**
- From the printer web page, click the **Configure** tab. Go to **System Settings > Maintenance Alerts.**

<table>
<thead>
<tr>
<th>Maintenance Alerts Setting</th>
<th>Description</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>Odometer (User Resettable)</td>
<td>Sets the length of media (in meters) that the printer prints before the Odometer (User Resettable) alert is sent, if this alert is configured. Unit of measurement is defined in the Unit of Measure parameter. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Odometer (Printer)</td>
<td>Sets the length of media (in meters) that the printer prints before the Odometer (Printer) alert is sent. Unit of measurement is defined in the Unit of Measure parameter. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Odometer (Printhead)</td>
<td>Sets the length of media (in meters) that the printer prints before the Odometer (Current Printhead) alert is sent, if this alert is configured. Unit of measurement is defined in the Unit of Measure parameter. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Replace Printhead</td>
<td>Sets the length of media (in meters) that the printer prints before the Replace Printhead alert is sent, if this alert is configured. Unit of measurement is defined in the Unit of Measure parameter. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Clean Printhead</td>
<td>Sets the length of media (in meters) that the printer prints before the Clean Printhead alert is sent, if this alert is configured. Unit of measurement is defined in the Unit of Measure parameter. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Faulty Dot</td>
<td>Sets the number of faulty dots on the printhead before the Faulty Dot alert is sent, if this alert is configured. Range is 0 to 4294967295.</td>
<td>0</td>
</tr>
<tr>
<td>Media Low Diameter</td>
<td>Sets the minimum diameter of the media roll before the Media Low alert is sent, if this alert is configured. Range is 0 to 200 mm.</td>
<td>0</td>
</tr>
<tr>
<td>Ribbon Low Diameter</td>
<td>Sets the minimum diameter of the ribbon roll before the Ribbon Low alert is sent, if this alert is configured. Range is 0 to 200 mm.</td>
<td>0</td>
</tr>
<tr>
<td>Memory Low</td>
<td>Sets the minimum percentage of free RAM memory and/or Flash memory before the Memory Low alert (if this alert is configured) is sent. Unit is percentage.</td>
<td>0</td>
</tr>
<tr>
<td>License Expired</td>
<td>Sets the number of days left before the “license expiring soon” alert is sent.</td>
<td>60</td>
</tr>
</tbody>
</table>
The INPrint Page

The INPrint page features sample web forms you can use to print single labels if you are using the Fingerprint or Direct Protocol Language on your printer. Select a web form from the lists and enter information in the fields for that label. You can then preview and print the label.

The printer firmware includes several predefined label formats. You can also copy your own label formats to the printer and print them from the INPrint page.

Print INPrint Labels

If the printer is connected to an Ethernet or Wi-Fi network, you can print labels by entering information in a web form. Access the web forms through the printer web page.

1. Open a browser window on your PC.
2. In the location or address bar, type the printer IP address and press Enter. The printer web page appears.
3. Click the INPrint tab.
4. Select the web form you want to print:
   - If you created the web form yourself, click Customer Downloaded and then select the web form in the list.
   - To use one of the Honeywell resident web forms, click Resident and then select the web form in the list.
5. Type information in the web form as needed.

To preview the label on screen, click Preview. To print the label, click Print.
## Printer Accessories and Options
