

Key Feature Changes from EZConfig for Scanning 3.x to 4.X

Main features of 4.1 release:

- Streamlined graphical user interface (GUI) to facilitate fast and easy barcode scanner configurations
- Automatic device discovery
- Improved search in Disconnected Device mode by segregating the devices into different categories
- Ability to connect to unknown HSM device in Connected Device mode
- Search feature for menu commands or text (integrated search of help topics coming soon)
- Clone settings to the current connected device, from the current device defaults file, or from any .exm file
- Compare settings between the current device settings, default device settings, or any .exm file
- Configuration History with undo capability
- 1D/2D Barcode generation for Changed, Selected or Cloned settings
- Interfaces supported: RS 232, USB serial, USB HID, USB HID KBD, USB HID Surepos

Main features of 4.2 release:

- Port communication via “Serial Data Window”.
- Capture image by providing menu commands from imaging tab.
- Aztec/Data Matrix support for 2D bar code generation.
- Image capture from selected RF Scanner.
- Auto firmware upgrade.
- Force Reader to Boot Mode support.
