Getting Started

Turn off computer's power before connecting the scanner, then power up the computer once the scanner is fully connected.

Power Supply Assembly (if included)

Note: The power supply must be ordered separately, if needed.

Connecting the Scanner

USB:

Keyboard Wedge:

RS485:

RS232 Serial Port:

Note: For RS232, you must use the power supply.

Reading Techniques

Present the bar code to the scanner. The aimer turns on and the LEDs turn up to read the code. If the light level in the room is not high enough, the code may not be read.

Standard Product Defaults

The following bar code resets all standard product default settings.

Standard Product Defaults

USB PC Keyboard

Scan the following code to program the scanner for a USB PC Keyboard.

USB PC Keyboard

RS485 Interface

The RS485 interface defaults to port 5B. If you have an IBM POS terminal using port 9B, scan the appropriate code below to program the terminal, then power cycle the cash register. If you have an IBM POS terminal using port 17, scan IBM Port 17 Interface bar code below.

IBM Port 17 Interface

Note: For additional RS485 interface selections, see the User's Guide for your product at our website, www.honeywellaidc.com.

USB Serial

If you are using a Microsoft® Windows® PC, you must download a driver from the Honeywell website (www.honeywellaidc.com). The driver will use the next available COM Port number.

Scan the following code to program the scanner to emulate a regular RS232-based COM Port. Apple® Macintosh computers recognize the scanner as a USB CDC class device and automatically use a class driver.

USB Serial

Note: No extra configuration (e.g., baud rate) is necessary.

Function Code Transmit

When this selection is enabled and function codes are contained within the scanned data, the scanner transmits the function code to the terminal. Charts of these function codes are provided in your User's Guide. When the scanner is in keyboard wedge mode, the scan code is converted to a key code before it is transmitted.

Keyboard Country

Scan the appropriate country code below to program the keyboard layout for your country or language. By default, national character replacements are used for the following characters: # \$ @ [\] ^ ' { } ~ Refer to the ISO 646 Character Replacements chart in your User's Guide to view the character replacements for each country.

USA (Default)

Belgium

Denmark

Finland

France

Germany/Austria

Great Britain

Italy

Norway

Spain

Switzerland

For a complete list of country codes, see the User's Guide for your product at our website, www.honeywellaidc.com.

Turbo Mode

This selection is a keyboard modifier, so it may only be used when your interface is USB Keyboard or Keyboard Wedge. The scanner sends characters to a terminal faster using Turbo Mode. If the terminal drops characters, do not use Turbo Mode.

Turbo Mode On

Turbo Mode Off

Scan Modes

When in **Presentation Mode**, the scanner is activated when it “sees” a bar code.

When in **Presentation - Mobile Phone** mode, the scanner is optimized to read bar codes from a Mobile phone or other LED displays.

For additional scan modes, see the User's Guide for your product at our website, www.honeywellaidc.com.

Suffix

If you want a carriage return, a tab, or an ETX after the bar code, scan one of the codes that follow. Otherwise, scan the Remove Suffix bar code to remove the suffixes.

Add CR Suffix

Add Tab Suffix

Add ETX Suffix

Remove Suffix

Add STX Prefix

If you want an STX before the bar code, scan the following bar code.

Add STX Prefix

Add Code ID Prefix to all Symbologies

Scan the following bar code if you wish to add a Code ID prefix to all symbologies at once.

Add Code ID Prefix To All Symbologies

Note: For a complete list of Code IDs, see the User's Guide for your product at our website, www.honeywellaidc.com.

Poor Quality PDF Codes

This setting improves the scanner's ability to read damaged or badly printed PDF codes by combining information from multiple images. When Poor Quality PDF On is scanned, poor quality PDF code reading is improved, but the scanner's snappiness is decreased, making it less aggressive when reading good quality bar codes. This setting does not affect 1D bar code reading.
