Agency Approvals

Label Locations

Dolphin 6510 mobile computers meet or exceed the requirements of all applicable standards organizations for safe operation. However, as with any electrical equipment, the best way to ensure safe operation is to operate them according to the agency guidelines that follow. Read these guidelines carefully before using your mobile computer.

Laser Safety Label

If the following label is attached to your product, it indicates that the product contains an engine with a laser aimer:
Out of the Box

Verify that your carton contains the following items:
• Dolphin 6510 mobile computer (the terminal)
• Battery pack (3.7v, Li-Ion)
• AC power supply (KSAS0120500200D5; Input: 100-240V AC, 50/60Hz 0.4 Amps; Output: 5 Volts DC, 2.0 A, Energy Efficiency Level VI)
• Localized plug adapters

Note: Be sure to keep the original packaging in case you need to return the Dolphin terminal for service; see Customer Support on page 12-1.

Initial Setup for Dolphin 6510 Terminals

Step 1. Install the Battery

The Dolphin 6510 is shipped with the battery packaged separate from the unit. Follow the steps below to install the battery.
1. Release the strap making it convenient to reach the cover.
2. Remove the battery compartment cover by turning the cover locks upward and removing the cover.
3. Insert the battery into the battery well with the labels facing upward.
4. Replace the cover with a hinging motion and turn the locks downwards.

Note: The battery door must be installed prior to booting the unit.
5. Replace the hand strap.
We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

Step 2. Charge the Batteries

Dolphin 6510s ship with the battery pack significantly discharged of power. Charge the battery pack with the Dolphin charging cable until the LED turns green (red while charging). The average charge time for a fully depleted battery is 7 1/2 hours. It takes less time if the battery has some charge.

1. Attach the appropriate plug adapter to the plug of the power cable.*
2. Insert the plug into the appropriate power source.
3. Plug the Dolphin power cable into the DC Power Jack (see page 3-11) on the bottom end of the unit.

Important: Removing the battery from the terminal erases all non-persistent memory.

*This power cable can also be used to power the Dolphin 6510 while in the Dolphin HomeBase (Model 6510-HB)/eBase (Model 6510-EHB) Device (see page 10-1).

We recommend use of Honeywell peripherals, power cables, and power adapters compiled with L.P.S. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.
The power adapter on the power cable converts the voltage from the power source to 5 volts DC. Only power adapter cables from Honeywell convert the voltage appropriately. The power cable contains a plug adapter for each geography (US, UK, EU, etc.).

Step 3. Boot the Terminal

The terminal begins booting as soon as power is applied and runs by itself. Do NOT press any keys or interrupt the boot process.

When the boot process is complete, the Desktop appears, and the terminal is ready for use.

Desktop

Note: You can access the Desktop any time by tapping the Change Views icon in the command bar and selecting Desktop on the popup menu.
## Command Bar Icons

The command bar, located at the bottom of application screens, provides access to many system functions and programs.

Using the Stylus

The terminal comes with a stylus included in a loop on the hand strap. Use this stylus (or your finger) to select or enter information on the touch screen. The stylus functions as a mouse; generally, a tap is the same as a click.

- **Tap**
  Tap the touch screen once or double tap to open menu items and select options.

- **Drag**
  Hold the stylus on the screen and drag across the screen to select text and images.

- **Tap & hold**
  Tap and hold the stylus on an item and a pop-up menu appears. On the pop-up menu, tap the action of the task you want to perform.

⚠️ Use of objects, such as paper clips, pencils, or ink pens on the touch screen can damage the input panel and may cause damage not covered by the warranty.

For more information about the touch screen, see Touch Screen Display on page 3-2.

Selecting Programs

Tap **Start > Programs**. To open a program, tap the icon on the menu.

Pop-Up Menus

You can quickly choose an action for an item using the pop-up menus.
1. Tap and hold the stylus on the item name. The pop-up menu appears.
2. Lift the stylus and tap the action you want to perform.

The contents of pop-up menus change according to the program you are using.

Using Windows Explorer

Use Windows Explorer to navigate through the files on your system. On the desktop, double tap the **My Device** icon and Windows Explorer opens to the root level.

Move files by tapping and holding on the file, then tapping **Cut**, **Copy** or **Paste** on the pop-up menus that appear.
Hardware Overview

Dolphin 6510 terminals include a number of standard terminal configurations as well as charging and communication peripherals and accessories to maximize the efficiency of your application setting.

Front Panel Features

Scan/Decode LED

The LED lights red when you press the Scan trigger in scanning applications. The LED lights green when a scanned bar code is successfully decoded. The LED lights red while the main battery is charging. The LED lights green when the main battery charging is completed. The LED lights blue during soft and hard resets. The LED is user-programmable. Please refer to the explanation in the SDK document. Honeywell D6x10 Device SDK for Windows CE 6.0 > Visual C++ Development > Device API > Functions > devSetLEDState

Keypad

28-key numeric keypad (alpha shifted) and 52-key full alphanumeric keypads are available.

Microphone

The integrated microphone can be used for audio recording.

Touch Screen Display

The display is a 3.5" transmissive active matrix, 65k color LCD display with a backlight, QVGA (240 x 320 resolution); see Display Backlight on page 3-3. The touch panel is a 4-wire analog resistive touch.

Dolphin 6510s ship with a screen protector already installed over the touch screen lens to help prevent damage to the touch screen. Do NOT remove this screen protector before initial use. Honeywell recommends using screen protectors, especially for applications that require high volume interfacing with the touch screen. For more information, see Using Screen Protectors on page 3-3. You can purchase additional screen protectors by contacting your Honeywell sales representative.

For touch screen input, use the stylus included with the terminal or your finger. The method you choose depends on which one is most appropriate for your application. While there is a great deal of variation in different applications, you generally achieve greater accuracy with the stylus for buttons or icons that are close together.

⚠️ Use of objects, such as paper clips, pencils, or ink pens on the touch screen can damage the input panel and may cause damage not covered by the warranty.
Display Backlight

The intensity of the backlight of the touch screen display may be changed, and the backlight may be programmed to turn off after the terminal has been idle for a specified period of time.

To adjust the intensity of the backlight while on battery power, tap Start > Settings > Control Panel > double tap Backlight.

Screen Backlight - Battery/External Power

Move the slider to adjust the screen backlight while on battery power.

You may turn the screen backlight off if the device is not used for a designated period of time by checking the option and designating the desired time period.

You may also turn on the screen backlight when a button is pressed or the screen is tapped by selecting the appropriate checkbox.

Note: Using the backlight option while on battery power substantially reduces battery life.

You may make the same changes when on external power by tapping the External tab.

Keyboard Backlight

To turn on the keypad backlight, check the checkbox.

The duration of backlight of keypad synchronizes with LCD backlight’s.

Using Screen Protectors

Honeywell defines proper use of the terminal touch panel display as using a screen protector and proper stylus. Screen protectors maintain the ongoing integrity (i.e., prevent scratching) of the touch panel, which is why their use is recommended for applications that require a high to medium level of interface with the touch panel.

Honeywell continues to advocate the use of screen protectors on all Dolphin terminals. We recommend implementing a screen protector replacement program to ensure that screen protectors are replaced periodically when signs of damage/wear are noticeable. For general use, we recommend replacing the screen protector every thirty (30) days. However, replacement cycles vary according to the average level of touch panel use in your application.
Replacement screen protectors can be purchased directly from Honeywell. Contact a Honeywell sales representative for details.

Honeywell also mandates use of a proper stylus, which is one that has a stylus tip radius of no less than 0.8mm. Use of the Honeywell stylus included with the terminal is recommended at all times.

Honeywell’s warranty policy covers wear on the touch panel for the first 12 months provided that a screen protector is applied and an approved stylus is used for the 12-month duration covered by the warranty.

**Removing the Screen Protector**

Dolphin 6510s ship with a touch screen protector already installed. To replace the screen protector, you must remove the one already installed.

1. Press the red **Power** button to suspend the 28-key unit or press the **Blue** then **Z** (Power) keys to suspend the 52-key unit.

2. Using a strong, flat, plastic card (e.g., credit card) wedge the edge of the card under the existing screen protector. Catch the edge of the screen protector and pull it up and away from the touch panel.

*Note: If you have one, you can also use the small plastic squeegees designed for touch panels.*

3. Wipe the screen with a clean, non-abrasive, lint-free cloth.

*Note: Use ionized air, if available, to blow additional dirt or particles off the touch panel.*

**Installing Your Screen Protector**

When installing a new screen protector, use a flat plastic card (e.g., credit card) to apply the screen protector smoothly and remove any air bubbles.

*Note: If you have one, you can also use the small plastic squeegees designed for touch panels.*

1. Press the red **Power** button to put the terminal in Suspend Mode on the 28-key Dolphin 6510 or press the **Blue** then **Z** (Power) keys on the 52-key Dolphin 6510.

2. Clean the touch panel thoroughly with a clean, non-abrasive, lint-free cloth. Make sure nothing is on the touch panel.
3. Release the left edge of the backing paper on the screen protector.

4. Align the exposed edge of the screen protector along the left edge of the touch panel. Make sure that it lies flush with edges of the touch panel.

5. Use the card on top of the screen protector to smooth it out as you pull on the backing paper.

*Note: To reposition the screen protector, lift up gently and reapply.*
6. Pull smoothly and evenly from left to right until the screen protector is applied. Press gently but firmly. Use the card as necessary to smooth out any air pockets or bumps after application.

7. Press the **Power** key to wake the terminal and check the touch panel with the stylus.

8. Verify that the screen accepts input from the stylus as usual. If not, re-apply the screen protector.

9. Press the red **Power** button to put the terminal back in Suspend Mode on the 28-key Dolphin 6510 or press the **Blue** then **Z** (Power) keys on the 52-key Dolphin 6510.

10. Clean the surface of the screen protector with a clean, non-abrasive, lint-free cloth.

11. Press the **Power** key to wake the terminal again.
12. For maximum performance, recalibrate the screen. Tap **Start > Settings > Control Panel > double tap Stylus > Calibration** tab.

![Stylus Properties](image)

13. Tap **Recalibrate** and follow the instructions on the screen.

Back Panel Features

Hand Strap
The Dolphin 6510 comes with an adjustable, elastic hand strap. The strap is attached to the device with the two small screws. It is threaded through the slot on the bottom of the back of the unit.

Keep in mind that the hand strap covers the battery. When you want to replace the battery, you will need to adjust the hand strap accordingly.

Rear Scan Button
The Dolphin 6510 has a Scan button conveniently located on the back of the unit. This button works like the SCAN button located on the front of the unit. Pressing this button can also resume a suspended device.

Finger Saddle
This is a slightly depressed and angled area of the back housing that is designed to cradle or "saddle" your finger while holding the terminal. This unique ergonomic design makes the terminal comfortable to hold and helps prevent you from accidentally dropping the terminal.

Installed Battery
For information about installing the battery, see Changing the Main Battery Pack on page 3-13
For information about battery power, see Battery Power on page 3-12.

Speaker
The integrated speaker sounds audio signals as you scan bar code labels and enter data, but emits no ambient noise on system activity (i.e., processor, memory access, radio traffic, etc.). The speaker can also be used for playing sounds (e.g., WAV or MP3 files).

The speaker meets the following SPL levels at 40cm:
- 500Hz–67db
- 1KHz–72db
- 4KHz–72db
Stylus

Dolphin 6510 terminals ship with a stylus inserted in a loop on the hand strap. Store the stylus in the hand strap when you’re not using it; see Using the Stylus on page 2-5.

Installing Memory Cards

The Dolphin 6510 supports Secure Digital (SD) memory cards from 512MB up to 8GB in capacity. The recommended SD cards are 2GB and 4GB ATP®-brand, which have been tested for reliability. You can purchase these SD cards by contacting your Honeywell sales representative.

To install an SD card:
1. Remove the battery door on the back of the unit.
2. Remove the battery.
3. Insert the SD card with the label facing upward by pressing down the small pin and sliding the SD card into the SD card connector until you feel it lock into position. The notch on the SD card should be in the upper-right hand corner.

Note: If your unit has trouble reading the SD card, the SD card may not have been inserted correctly. If depressing the small pin allows the card to eject, the card was not properly inserted and “locked in.”

4. Replace the battery and battery door.
5. Tap the Power or SCAN key to resume operation.
6. To verify that the operating system recognizes the new memory card, open Windows Explorer and navigate to My Device\Storage Card.

To remove an SD card:
1. Remove the battery door on the back of the unit.
2. Remove the battery.
3. Press the SD card towards the front of the terminal until you hear a click to confirm that it has unlocked. The card will stop when it hits the pin.
4. Depress the small pin at the edge of the card. The card will pop out enough for you to grab its edge.
**Left Side Panel Features**

![Side Button and Headset Jack Diagram]

**Side Button**
There is a button like this on both side panels. You can use the Programs Buttons option in the Control Panel to change the functionality of the side buttons.

**Headset Jack**
The rubber door on the right side panel provides access to the headset jack. This is a 2.5mm audio jack that supports a headset with a mono speaker and microphone.

When closed, the side door seals the terminal from moisture and particle intrusion thus preserving the terminal’s environmental rating.

**Right Side Panel Features**

Bottom Panel Features

DC Power Jack
The DC power jack receives external power from the Dolphin power cable that is included in the box with the terminal. When connected to the Dolphin power cable, the terminal is powered and the main battery pack is charging.

I/O Connector
The I/O mechanical connector is designed to work exclusively with Dolphin 6510 peripherals and cables. This connector powers the terminal, charges the main battery, and facilitates communication. This connector supports high speed USB 2.0 communication (12 Mbps to 480 Mbps) and RS-232 communications with a maximum speed of 115Kbps and seven baud rate settings.

Through this connector, you can communicate with a host workstation via Microsoft ActiveSync; see ActiveSync Communication on page 6-3.

The I/O connector supports the following signals:

- DC IN
- Transmitted Data
- Request To Send
- USB Host +5V
- USB Host D+
- USB Host D-
- USB Host Detect
- Clear To Send
- Received Data
- GND
- RS-232 Shutdown
- USB Client D+
- USB Client D-
- USB Client +5V

Note: Signals referenced are for a DTE device.
Dolphin Peripherals/Accessories for the Dolphin 6510

The following items are sold separately and enhance your Dolphin 6510’s capabilities.

Dolphin HomeBase™ Device

This charging and communication cradle supports USB and RS-232 communication, enabling your terminal to interface with the majority of enterprise systems. When a terminal is seated in a powered base, its main battery pack charges in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

A spare battery may also be charged in the battery charging well behind the terminal.

For more information, see Dolphin HomeBase/eBase Device on page 8-1.

Dolphin eBase™ Device

The Dolphin eBase is used to charge the main battery, to power the battery charging system in the terminal, and can be used to communicate data from the terminal to a PC/laptop via the Ethernet port.

A spare battery may also be charged in the battery charging well behind the terminal.

For more information, see Dolphin HomeBase/eBase Device on page 8-1.

Dolphin QuadCharger™ Device

The Dolphin QuadCharger device, a four-slot charging station for Dolphin Li-Ion battery packs, can charge each battery in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

For more information, see Dolphin QuadCharger Device on page 9-1.

USB Communication Cable for the Dolphin 6510

The USB Communication Cable for the 6510 is used when communicating between the terminal and a PC/laptop via the USB port. The cup-style 6510-USB cable slides onto the bottom of the device lining up with the connector. The cable unit includes an opening for the power cable. See Connecting the USB Charging/Communication Cable for the Dolphin 6510 on page 6-2.

Li-Ion Battery Packs

The Li-Ion battery pack provides the main power supply for the terminal. For more information, see Battery Power on page 3-12.

Battery Power

The intelligent battery technology inside the terminal features two types of battery power:

- The main battery pack on the back panel (see Main Battery Pack on page 3-13)
- The backup battery located inside the terminal (see Internal Backup Battery on page 3-15)

Both batteries work together to prevent data loss when the terminal is used over long periods of time.

Both batteries must be charged to full capacity before using the Dolphin 6510 for the first time!

Charge the main battery pack with the Dolphin charging cable until the LED turns green (red while charging). The average charge time for a fully depleted main battery is 5 1/2 hours. It takes less time if the battery has some charge.
**Main Battery Pack**

We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

The Dolphin 6510 has a Li-Ion 3.7V/2,200mAh, 8.1Wh and Li-Ion 3.7V/3,300mAh, 12.2Wh battery pack. The Li-Ion battery pack is the primary power source for the Dolphin terminal as well as the internal backup battery.

**Changing the Main Battery Pack**

Before installing a battery pack, press the **Power** button on the 28-key Dolphin 6510 or press the **Blue** then **Z (Power)** keys on the 52-key Dolphin 6510 to put the terminal in **Suspend Mode** (see page 3-16) so that operations are suspended before removing the main power source. The Dolphin 6510 is shipped with the battery separate from the unit. You will need to loosen the hand strap, remove the battery door, insert the battery, and replace the battery door. Refer to the instructions included in **Install the Battery** section (page 2-1).

*Note: The battery door must be installed prior to booting the unit.*

**Charging Options**

When the battery is installed in the terminal, you can use any of the peripherals listed below to charge the battery.

- **Dolphin HomeBase/eBase Device** (see page 8-1)
- **Dolphin Comm/Charge Cable**: Connecting the USB Charging/Communication Cable for the Dolphin 6510 (see page 6-2). You may charge the device using the USB connection if you do not have a wall adapter. There are two options that allow either 100mA or 500mA of current over the USB connection. Access the option by selecting **Start > Settings > Control Panel > Power > USB Charging**.

To fully charge the Li-Ion battery before installing it in the terminal, use the

- **Dolphin QuadCharger Device** (see page 9-1) or insert the battery in the spare battery charging well in the back of either the Dolphin HomeBase or Dolphin eBase.

**Charging Time**

The 3300mAh battery pack charges to full capacity in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.
Managing Main Battery Power

Data and files saved on the Dolphin terminal may be stored in RAM memory; therefore, maintain a continuous power supply to the terminal to help prevent data loss. When you remove a battery pack, insert another charged battery pack in the Dolphin. If the main battery pack is low, insert the terminal into a charging peripheral to power the terminal and begin recharging the battery.

Note: If the main battery is low and the terminal is in Suspend Mode, pressing the Power button does not wake the Dolphin 6510 terminal; you must first replace the discharged battery with a fully charged battery or apply A/C power to the terminal.

Checking Battery Power

Power icons appear in the command bar at the bottom of the window. Double tap on the battery icon to open the Power Properties. The Battery tab opens displaying the charge status of both the main and backup batteries.

Note: You can also check battery power by tapping Start > Settings > Control Panel > double tap Power.

Storage Guidelines

To maintain optimal battery performance, follow these storage guidelines:

• Avoid storing batteries outside the specified range of -4 to 140°F (-20 to 60°C) or in extremely high humidity.
• For prolonged storage, it is recommended that the battery be at a 40% - 50% charge level, be removed from the device, and stored in a controlled temperature environment. Following these recommendations will maximize battery life.

Guidelines for Battery Pack Use and Disposal

The following are general guidelines for the safe use and disposal of batteries:

• We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may pose a personal hazard to the user.
• DO NOT attempt to charge damp/wet mobile computers or batteries. All components must be dry before connecting to an external power source.
• Replace defective batteries immediately; using a defective battery could damage the Dolphin terminal.
• Never throw a used battery in the trash. It contains heavy metals and should be recycled according to local guidelines.
• Don’t use a battery in any other manner outside its intended use in Dolphin terminals and peripherals.
• Don’t short-circuit a battery or throw it into a fire; it can explode and cause severe personal injury.
• Excessive discharge damages a battery. Recharge the battery when your terminal indicates low battery power.
• If you observe that the Honeywell battery supplied is physically damaged in some way, send it to Honeywell International Inc. or an authorized service center for inspection. Refer to the Product Service and Repair (page 12-1) section of this guide.
• Although your battery can be recharged many times, it will eventually be depleted. Replace it after the battery is unable to hold an adequate charge.
• If you are not sure the battery or charger is working properly, send it to Honeywell International or an authorized service center for inspection.

Internal Backup Battery
Located inside the terminal, the backup battery is a 3.7V Lithium ion battery.
The internal backup battery prevents the terminal from being reset when you remove the main battery pack. This backup battery retains RAM data and allows the real-time clock to remain operational for at least 30 minutes. If the terminal is left without the main battery pack for more than 30 minutes, the internal backup battery discharges and needs to be recharged to function according to specifications.

Note: Even if the internal backup battery fails, data and programs stored in Flash memory (\Honeywell\AutoInstall) or on an optional SD card are not lost. However, the terminal automatically cold boots when you install a fully charged battery pack and you will need to reset the real-time clock.

Charging
The internal backup battery charges off the main battery pack and requires 2 hours charge time to backup RAM data for 30 minutes. You can begin using the Dolphin terminal after charging the main battery for an average of 5 1/2 hours for a fully depleted battery; however, the internal backup battery will continue to charge off the main battery. It takes less time to charge the main battery if the battery has some charge.
To ensure that the internal backup battery functions properly, maintain a consistent power supply for the first eight hours of terminal operation. This power supply can be external power (using a charging peripheral) or an installed, charged battery pack or a combination of both.

Charging Guidelines
Follow these guidelines to maximize the life of the Dolphin 6510’s internal backup battery under normal usage conditions:
• Keep a charged Li-Ion battery pack in the Dolphin terminal.
• Keep the Dolphin terminal connected to a power source when the terminal is not in use.

Resetting the Terminal
Soft Reset

28-key: Using the stylus, press the Reset button. Or press and hold Power button more than 3 seconds until you can see the Power Menu in the LCD. And then, release Power button and tap the SOFT RESET.

52-key: Using the stylus, press the Reset button. Or press and hold the Blue and Z (Power) buttons more than 3 seconds until you can see the Power Menu in the LCD. And then, release the BLUE and Z (Power) buttons and tap the SOFT RESET.
The screen turns white and the decode/scan LED flashes blue for approximately 10 seconds.
Hard Reset

28-key: Press and hold the Power button and then using the stylus, press the Reset button. Or Press and hold Power button more than 3 seconds until you can see the Power Menu in the LCD. And then, release Power button and tap the HARD RESET.

52-key: Press and hold Z (Power) buttons and then using the stylus, press the Reset button. Press and hold the Blue and Z (Power) buttons more than 3 seconds until you can see the Power Menu in the LCD. And then, release the BLUE and Z (Power) buttons and tap the HARD RESET.

The screen turns white and the decode/scan LED flashes blue to approximately 18 seconds.

Soft Reset (Warm Boot)

A soft reset re-boots the terminal without losing RAM data, terminates all running applications, reloads the OS, and launches Autoinstall, which installs any CAB or REG files in the \Honeywell\AutoInstall folder.

You would perform a soft reset 1) when the terminal fails to respond, 2) after installing software applications that require a reboot, 3) after making changes to certain system settings, or 4) to install new CAB or REG files.

The desktop appears when the Soft Reset is complete.

Hard Reset (Cold Boot)

A hard reset erases all of the data and applications stored in RAM memory, reloads the OS, resets the Real Time Clock (RTC), and launches Autoinstall, which installs any CAB or REG files in the \Honeywell\AutoInstall folder.

Hard resets automatically launch a soft reset as part of the boot process if there are CAB files present.

You would perform a Hard Reset (instead of a Soft Reset) when you want to ensure the RAM memory is also cleared. RAM memory stores settings for Internet Explorer, Outlook, and other Microsoft applications.

Note: Set the time and date after each hard reset to ensure that the system clock is accurate. Double-click the date on the command bar to open the Clock setting and set the time and date.

Suspend Mode

Suspend Mode suspends terminal operation. The terminal appears to be “off” when in Suspend Mode. The terminal is programmed to go into Suspend Mode automatically when inactive for a specified period of time. You can set this time period in the Power setting.

To suspend operation, press the red Power button to put the terminal in Suspend Mode on the 28-key Dolphin 6510 or press the Blue then Z (Power) keys on the 52-key Dolphin 6510. To wake the device, press the Power button. You may also press the front or rear scan keys to wake a suspended device.

Troubleshooting Suspend/Resume

If the terminal does not wake when you press the Power button on the 28-key Dolphin 6510 or press the Blue then Z (Power) keys on the 52-key Dolphin 6510, the main battery might be too low to resume operation. To check, remove the battery and install a fully charged battery or connect the terminal to a Dolphin charging peripheral.

Changing the Memory Allocation

You can adjust file storage vs. program memory in System Properties.
1. Tap Start > Settings > Control Panel > System > Memory tab.

**Care and Cleaning of the Dolphin Terminal**

When needed, clean the image or laser engine window and the LCD display with a clean, non-abrasive, lint-free cloth. The terminal can be cleaned with a damp cloth.

### Alpha/Numeric Modes

- **28-key keypad:** The keypad defaults to numeric mode. Use the **ALPHA** key to toggle between numeric and alpha modes. Pressing the **ALPHA** key locks the keypad in numeric mode, alpha mode (lowercase), or alpha mode (uppercase).
- **52-key keypad:** The keypad is a full alpha and numeric keypad. Pressing the **SFT** key twice in rapid succession toggles between upper and lowercase.

The command bar on the screen displays an icon that indicates the alpha/numeric status of the keypad.

### Alpha Indicators on the Number Keys

Each number key displays the characters typed when you press that key in alpha mode.
Note that when typing in alpha mode on the 28-key Dolphin 6510, you must use the same multi-press method you would use when typing letters on a phone keypad. Each key press types the next letter in the sequence as displayed by the alpha indicator.

**Function Key Combinations**

On the 28-key keypad, hold down the Function key (FUNC) and then press a key with the blue text/icons below it to perform specific functions.

Using the Image Engine

Overview

The Dolphin 6510 houses a compact image engine using Adaptus™ Imaging Technology that instantly reads all popular 1D and 2D bar codes and supports omni-directional aiming and decoding. The image engine can also capture digital images, such as signatures and pictures.

Available Image Engines

Dolphin 6510s are equipped with N560x Standard Range (N5603SR) image engines.

Activating the Engine

When a scanning application is open, press the Scan key to activate the image engine.

Using Demos

Dolphin Demos are software utilities loaded on all Dolphin terminals that demonstrate the advanced features of the terminal. There are two Demos that feature the image engine: Image Demo and Scan Demo.

To access these demos, tap Start > Programs > Demos.

- Select Scan Demo to verify decoding, or
- Select Imaging Demo to verify imaging

For more information about Demos, refer to the Dolphin Demos User’s Guide, which is available for download from www.honeywellaidc.com.

Decoding

The Dolphin terminal supports two types of image decoding: full-area imaging and Advanced Linear Decoding (ALD).

Full-area Imaging

Full-area imaging means that the Dolphin terminal supports omni-directional aiming, meaning that a positive read can be obtained from many positions. For details, see Omni-Directional Scanning Positions on page 5-4.

ALD

ALD provides fast reading of linear (1D) and stacked linear bar codes (PDF417). For the best read, the aiming pattern should be centered horizontally across the bar code. When ALD is enabled, the reader does not read matrix or postal codes.

To Decode a Bar Code

1. Tap Start > Programs > Demos > Scan Demo.
2. Position the Dolphin terminal over one of the Sample bar codes on page 5-4.
   A range of 4-10 inches (10-25 cm) from the bar code is recommended.
3. Project the aiming brackets by pressing and holding the Scan key. The Scan LED lights red.
4. Center the aimer crosshair over the bar code. The aiming beam should be oriented in line with the bar code to achieve optimal decoding; Omni-Directional Scanning Positions, page 5-4.
5. When the bar code is successfully decoded, the decode LED lights green and the terminal beeps.
**Sample Bar Codes**

You can use the following bar codes to verify decoding:

Sample 128

Code 128

Sample PDF417

PDF417 Test Message

**Omni-Directional Scanning Positions**

The high-vis aiming pattern frames the bar code to provide you with the best scanning performance.

*Note: To achieve the best read, the aiming beam should be centered horizontally across the bar code.*

The aiming pattern is smaller when the terminal is held closer to the code and larger when the terminal is held farther from the code. Symbologies with smaller bars or elements (mil size) should be read closer to the unit whereas larger bars or elements (mil size) should be read farther from the unit.
Capturing Images

The image-capture process is an intuitive, split-second operation for experienced users. By following basic guidelines, however, new users can easily develop their own technique and, with practice, quickly learn to adapt to different application environments.

Image Preview

When the imaging process is initiated, the touch screen displays a preview of the object. This is a live video image of what the imager is currently viewing and has a slightly degraded appearance compared to the captured image. This is normal; the captured image has a higher resolution.

File Formats

The Dolphin terminal is capable of saving images in a number of industry-standard file formats (BMP, JPG and PNG). The default file format for images is a grayscale BMP.

File Size

Digital images have a maximum image size of 640 x 480 pixels and may have up to a 256 grayscale image definition. The image quality and related file size are determined by the data compression method used by the software application used to take the image. The average size of the image file is approximately 4-8K. However, the size of the image depends on image content; the more complex the content, the larger the file size.

Taking an Image

1. Tap Start > Programs > Demos > Imaging Demo.
2. Point the Dolphin terminal at the object.
3. Press the Scan key to activate the engine. The touch screen displays a preview of the object.
4. Adjust the terminal’s position until the preview on the screen is as you want it to appear in the image.
5. Hold the terminal still and release the Scan key. The touch screen flashes, and the captured image appears on the screen.
6. By default, the image is saved to the My Documents folder in My Device. To save the image to another location, tap File > Save As.

High-Vis Aiming Pattern

If your Dolphin terminal is configured with the N5603SR imager, you can enable the aiming pattern for imaging in the Image Demo application.
1. Tap Start > Programs > Demos > Imaging Demo > Setup menu > Aimer.
2. The aiming pattern is now enabled for imaging.

Uploading Images

Image files can be transmitted to a host workstation via
- Microsoft ActiveSync and a Dolphin communication peripheral
- Wireless radio: 802.11a/b/g/n and/or Bluetooth
Communication Options

Dolphin terminals offer several communication options including Microsoft ActiveSync and wireless radios.

I/O Connector (Wired Communication)

The mechanical connector on the bottom panel (see I/O Connector on page 3-11) connects the terminal to various Dolphin communication peripherals that connect to a host workstation via USB 2.0, thus enabling ActiveSync communication.

For more information, see ActiveSync Communication on page 6-3.

Wireless Radios (Wireless Communication)

Dolphin 6510s can be equipped with 802.11a/b/g/n and Bluetooth radios or just a Bluetooth radio. For more information, see Wireless Radios on page 6-6.

Installing Additional Software

Dolphin terminals ship with the operating system, radio drivers, and custom Honeywell software already installed. These are the default programs that install when your terminal first boots up. You can install additional software programs on the terminal provided that the following parameters are met:

• the software program was created for a Windows CE device.
• the terminal has enough memory to store and run the program.
• the program has an EXE, CAB, or DLL extension.

When selecting programs, verify that the program and version of the program are designed for the Windows CE 6.0 and the terminal’s processor. You can verify your processor by tapping Start > Settings > Control Panel > System > General tab. Make a note of the information in the Processor field.

To install additional software, you can use the communication options described in this chapter.

• Adding Programs via ActiveSync, page 6-5.
• Adding Programs from the Internet, page 6-7.
Connecting the USB Charging/Communication Cable for the Dolphin 6510

Slide the USB cable unit onto the bottom of the terminal lining up the terminal’s I/O connector to the cable unit’s connector to facilitate USB communication between the Dolphin terminal and the host workstation.

Charging Terminal with USB Cable

Not only can you communicate between the terminal and the host using the Dolphin Charging/Communication cable, but you can also trickle charge the terminal. To charge the main battery using the USB cable, select Start > Settings > Control Panel > Battery > USB charging.
ActiveSync Communication

To synchronize, ActiveSync 4.1 or higher must be installed and configured for the appropriate communication type on the host workstation and the Dolphin terminal. Dolphin terminals ship with ActiveSync already installed. Therefore, if ActiveSync is already installed on the host workstation, you just need to connect the Dolphin terminal to the host workstation (via Dolphin peripheral) to initiate communication.

Note: You can download the most current version of ActiveSync from www.microsoft.com.

When communicating via ActiveSync, your terminal is designed to be connected to the host workstation with a Honeywell communication peripheral. We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

Communication Type

The Dolphin 6510 supports the following type of communication via ActiveSync through its I/O Connector on the bottom panel:

USB

The USB cable and hardware peripherals allow the Dolphin terminal to communicate with a workstation through a USB port or to a network through a USB hub. The Dolphin terminal supports high-speed USB communication (USB 2.0); maximum data transfer rate is 480 Mbps. The Dolphin terminal defaults to USB communication out of the box.

Hardware Requirements for Setup

• Dolphin communication peripheral
• Dolphin power cable
• USB Cable (for USB communication)
• ActiveSync v4.1 or higher installed on the host workstation
• Windows 98 Second Edition, Windows Me, Windows 2000, Windows NT (4.0 SP6 or higher), Windows XP, Windows 7, or Windows 10 computer

Software Requirements for Communication

To sync successfully, ActiveSync must be configured for the same communication type on both the host workstation and the Dolphin terminal. ActiveSync must be setup on your workstation before you initiate synchronization from the terminal for the first time.

Setting Up the Host Workstation

Verify that ActiveSync is configured to use the appropriate communication type by clicking File >

Connection Settings.
For USB communication, check Allow USB connections.
Setting Up the Dolphin Terminal

The Dolphin terminal defaults to USB communication out of the box. To verify and/or change the default setting, tap **Start > Settings > Control Panel > PC Connection**.

![PC Connection Properties](image)

- **Must be checked to connect to a workstation**
- **Displays the current connection setting**
- **Tap to change the connection settings**

Tap **Change Connection** to change the current settings.

![Change Connection](image)

**Connection Options**

- **Select this option to ...**
- **’USB** Establish a USB connection.

Communicating with the Dolphin Terminal

After setting up both the workstation and the terminal, ActiveSync connection should be automatic.

1. Connect the Dolphin terminal to a communication peripheral, such as the Dolphin HomeBase.
2. The Dolphin terminal automatically opens ActiveSync to establish a connection.

Synchronizing with the Host Workstation

After setup, synchronization begins automatically whenever the terminal’s mechanical connector connects to a Dolphin peripheral that is connected to a host workstation with ActiveSync installed.
Exploring the Terminal from the Workstation

When the terminal and desktop computer are connected, open the main ActiveSync window (on the desktop), and click Explore.

The Mobile Device folder opens in Windows Explorer.

The Dolphin terminal is now treated as a mass storage device, and transferring files is as simple as dragging and dropping or copying and pasting as you would for moving files between folders on your hard drive.

Adding Programs via ActiveSync

When selecting programs, verify that the program and version of the program are designed for the Windows CE 6.0 and the terminal’s processor. You can verify your processor by tapping Start > Settings > Control Panel > System > General tab. Make a note of the information in the Processor field.

Generally, software for Windows CE devices must be installed to the host workstation first, then transferred to the Dolphin terminal.

1. Download the program to the workstation from either the Internet or the install CD. You may see a single *.exe or setup.exe file, a *.cab file, or *.dll. (There may also be several versions of files for different device types and processors.)

2. Read any installation instructions, Read Me files, or documentation that comes with the program. Many programs provide special installation instructions.

3. Connect the terminal to the workstation via a Dolphin communication peripheral.
If the File is an Installer
An installer program is one that installs to the workstation and the terminal simultaneously; one process installs to both devices.
1. On the workstation, double-click the *.exe or *.setup.exe file. The installation wizard begins.
2. Follow the directions on the workstation screen.
   The installation process includes transferring the software to the terminal via ActiveSync.

If the File is Not an Installer
Some programs cannot be installed on workstations because they are designed exclusively for Windows CE devices. In these cases, the appropriate files must be stored on the host workstation and transferred to the terminal via ActiveSync Explore.

Note: You know that the program is not an installer because an error message stating that the program is valid but designed for a different type of computer appears when you try to install the program on the workstation.

1. If you cannot find any installation instructions for the program in the Read Me file or documentation, open ActiveSync on the workstation and click Explore.
2. On the workstation, navigate to the workstation folder containing the program file(s) and copy them to the Program Files folder on the terminal.
   If you want the program to persist through hard resets, paste the program to the Autoinstall folder (\Honeywell\AutoInstall).
3. On the terminal Desktop, tap My Device and, in Windows Explorer, navigate to the folder where the program is located.
4. Double tap on the program file to install it.
   If you copied the file to the Autoinstall folder, you can choose to install the program by performing a hard reset. The program installs as part of initialization.
5. After installation is complete, access the program by tapping Start > Programs, and the program appears on the Programs screen. Tap the icon to open the program.

Wireless Radios
There are two radio options: 802.11a/b/g/n and Bluetooth.
1. **802.11a/b/g/n (WPAN/WLAN configuration)**: see WLAN (802.11a/b/g/n Radio), below.
2. **Bluetooth (WPAN configuration)**: see Bluetooth Handler on page 7-1.

Connecting the Terminal to a Wireless Network
You connect the terminal to a wireless network through the on-board radio (802.11a/b/g/n and/or Bluetooth). Each radio has its own configuration program and requires specific information about the wireless network to connect. Successful connection depends on your network infrastructure about which you will need specific information from your network administrator.

**WLAN (802.11a/b/g/n Radio)**
Dolphin 6510s can have a dual band (2.4/5 GHz) 802.11a/b/g/n WLAN (Wireless Local Area Network) radio. The radio is interoperable with other 802.11a/b/g/n, Wi-Fi compliant products including access points (APs), workstations via PC card adapters, and other wireless portable devices. By default, the 802.11a/b/g/n radio is disabled after each factory reset. The next step is to configure the connection parameters of the radio to connect to a wireless network.
By default, the 802.11a/b/g/n radio is powered off (i.e., disabled) “out of the box.” To power it on (i.e., enable), press the vertical arrow (bottom, right corner of screen) and select **Turn Wireless LAN On**. The enable/disable state of the radio will survive subsequent soft and hard resets. The next step is to configure the connection parameters of the radio to connect to a wireless network.

**Configuring the WLAN Radio**

The WLAN radio is configured in the Honeywell WLAN Security Supplicant, which you access by double tapping the program icon in the command bar.

For complete configuration instructions, download the **Honeywell Secure Wireless (SWC) Client User’s Guide** from [www.honeywellaidc.com](http://www.honeywellaidc.com). A link to this guide appears on the Dolphin 6510 product page.

**Adding Programs from the Internet**

When you have established a network connection (whether via Wireless LAN, Bluetooth, or ActiveSync, you can access the Internet and download additional software programs.

When selecting programs, verify that the program and version of the program are designed for Windows CE6.0 and the terminal’s processor. You can verify your processor by tapping Start > Settings > Control Panel > System > General tab. Make a note of the information in the Processor field.

1. Open Internet Explorer and navigate to the program’s location. You may see a single *.exe or setup.exe file, or several versions of files for different device types and processors.
2. Select the program version that matches your Dolphin terminal and processor.
3. Read any installation instructions, Read Me files, or documentation that comes with the program. Many programs provide special installation instructions.
4. Download the program to the terminal directly from the Internet.
   You would normally store the program in the Program Files folder unless another location is required by the program.
5. On the terminal, double tap the installer file; e.g., the *.exe file.
6. The installation wizard for the program begins.
7. Follow the directions on the screen to complete installation.
Bluetooth Handler

Bluetooth wireless technology is a short-range communications technology to connect portable and/or fixed devices while maintaining high levels of security.

Enabling the Bluetooth Radio
1. Select the UP arrow in the lower, right portion of the display.
2. Tap Turn Bluetooth On.
The Bluetooth icon appears in the task bar.

Connecting to Other Devices
Before connecting to another device, make sure that the Bluetooth connection on the other device is enabled.
1. Double tap on the Bluetooth icon in the task bar.
The Bluetooth Handler appears on the screen.
2. Tap Scan Device.
The available services of all devices / profiles in range display in the Bluetooth Handler.

Pairing Bluetooth Devices
Connecting Bluetooth devices usually requires that they be paired; the same passkey must be entered for each device. If you want to connect the Dolphin 6510 to a device without any input method (e.g., printers, headsets), refer to the user documentation that accompanied the device for pairing information.
1. Tap on the desired device / profile in the Bluetooth Handler.
2. Select Trusted from the drop down menu. Once asked if you need to authenticate the device
3. Tap on the Yes button.
4. Enter 4 random digits and tap Yes.
5. Enter the same digits on the other device when prompted.
6. After pairing, double tap on the selected device / profile and select Active.

Setting Up a Bluetooth Printer
1. Make sure that the Bluetooth printer is on and activated.
2. If not done so already, turn Bluetooth On (by selecting the vertical arrow on the Command Bar).
3. Tap Serial tab.
4. Tap Scan Device, which runs a Bluetooth Inquiry, then SDP Query.
5. If you see your Bluetooth printer device displayed, you can tap Cancel to stop the search.

OR
Wait until all Bluetooth devices in range have been scanned. Then the Scan Dialog window appears.
6. Scroll through the list until your Bluetooth printer device is found. You may single tap any device in the list to display its MAC address.

7. Highlight the Bluetooth printer device and tap the Select button.

8. When the COM port selection appears, select available COM port in the list and tap OK.

9. If successful, the COM port and MAC address of the device appears under the list of Registered Bluetooth Virtual COM ports.

10. Tap OK to exit the Bluetooth Handler.

11. One of the ways to test the connection to the printer is to follow the steps below:
   a. Select Start > Programs > Demos > Print Demo.
   b. Tap Zebra (BT) Barcodes Print.
   c. If successful, the barcode prints.

**Setting Up a Connection to a Mobile Phone**

You can use a GSM mobile phone as a modem to connect to the Internet using GPRS (General Packet Radio Service) data connection.

Prior to connecting the Dolphin 6510 to a mobile phone, contact your mobile phone service provider about the GPRS configuration, coverage, and fees. Also consult the user documentation for your mobile phone to determine if your phone supports GPRS data transfer and if it has an available Bluetooth connection. If your phone supports 3G data transfer, you should be able to connect the Dolphin 6510 to your phone.

1. Determine if your phone is configured and connected to GPRS.

2. Activate your mobile phone’s Bluetooth feature.

3. Select Start > Settings > Network and Dial-up Connections.

4. Double tap on Make New Connections.

5. Choose Dial-up Connection and select Next.

6. Select Bluetooth.

7. Select and activate the data modem service for your phone (refer to Pairing Bluetooth Devices (page 7-1) and press OK.

8. Select the data modem service from step 7 from the Select a Modem: drop down menu.

9. Enter a dial-up phone number. (Contact your mobile network services provider for additional information about connecting the Internet using your mobile phone.)

10. Tap Finish.
Dolphin HomeBase/eBase Device

Overview

Note: The information in this chapter applies to both the Dolphin HomeBase and Dolphin eBase devices unless otherwise indicated.

As the hub of your Dolphin 6510 system, the Dolphin HomeBase charging and communication cradle supports high-speed USB 2.0 and RS-232 communication with a workstation. The Dolphin eBase is identical to the Dolphin HomeBase except it supports Ethernet communication as well as USB 2.0, and RS-232.

Communication

The base can communicate via USB or serial RS-232 (or Ethernet for the eBase). Data transmission for USB is up to 480 Mbps. Data transmission for serial RS-232 is up to 115 Kbps. These bases cannot be physically connected to each other—sometimes referred to as “daisy-chaining”—but can be networked together via serial or USB hubs.

Battery Charging

The base completes a full charge of a fully depleted main battery pack in an average of 5 1/2 hours. It takes less time if the battery has some charge.

In addition to charging, the base powers the terminal’s intelligent battery charging system, which protects the battery from being damaged by overcharging. The terminal senses when a battery pack is fully charged and automatically turns off the charger. If the battery voltage drops below the charge threshold, the charger turns on again to maintain the battery at full capacity. As a result, Dolphin terminals may be stored in the base indefinitely without damage to the terminals, battery packs, or peripherals. For prolonged storage, see Storage Guidelines on page 3-14. The base can also charge a second battery while the terminal is positioned in the base. See Charging a Spare Battery on page 8-6.

Power Supply

The power cable that ships with each terminal also powers the base.

- We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

- We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

- Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.
**Front Panel**

Terminal Well

Place the Dolphin terminal in the terminal well to communicate with a host device, power the terminal, and charge the terminal's battery. Make sure that the device is securely seated.

Rubber Feet

The bottom panel has four rubber feet to stabilize the unit on a flat surface. You can set the base on a dry, stable surface, such as a desktop or workbench near an electrical outlet.
**Back Panel**

**DC Power Jack**

Connect the power cable to this power jack; see Powering the Dolphin HomeBase Device on page 8-4.

**USB Port**

The USB port is High-speed (v2.0). Using the USB cable, you can connect the base to a USB-compliant device to facilitate USB communication to and from the terminal. USB communication occurs through Microsoft ActiveSync (v.4.1 or higher). For more information about ActiveSync setup, see Synchronizing with the Host Workstation on page 6-4.

**Serial Port**

The serial port supports serial communication between the terminal and another device. Note that the connector is a DB9 Male connector, requiring a female connector on the serial cable. The following four signals are supported:

- Transmitted Data
- Received Data
- Request to Send
- Clear to Send

*Note: ActiveSync is not supported over the serial port.*

**Ethernet Port (eBase only)**

Using an Ethernet cable, you can connect the eBase to an Ethernet-compliant device to facilitate Ethernet communication to and from the terminal. This equipment is for indoor use only. The communication wiring is limited to the inside of a building.
Powering the Dolphin HomeBase Device

The terminal requires 5 volts DC input for communication and battery charging; the power adapter on the power cable converts the voltage from the power source to 5 volts DC. Only power adapter cables from Honeywell convert the voltage appropriately.

The same power cable that ships with each terminal can be used to power the base. This cable contains a plug adapter for each geography (US, UK, EU, etc.).

1. Attach the appropriate plug adapter to the power adapter.
2. Plug the power cable into the power source.
3. Plug the connector into the DC power jack on the back panel. The base is now powered.

When a terminal is properly seated, the base powers the terminal, charges the terminal’s main battery pack, and launches ActiveSync (see Communicating with the Dolphin Terminal / Synchronizing with the Host Workstation on page 6-4).

Honeywell recommends that you leave the base connected to its power source at all times, so that it is always ready to use.

eBase Clamp-on Ferrite Core Installation

We recommend that you install the clamp-on ferrite core included with your Dolphin® eBase on your Ethernet cable. Installation of the ferrite is required to meet the declared FCC emission levels.
The following illustration shows how to install the ferrite on the cable. It should be placed approximately 1.57 inches (40mm) from the RJ45 plug. The cable should be looped around the core, as shown.

---

**Charging the Main Battery**

The base powers the terminal and fully charges its main battery pack in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge.

As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for Li-Ion batteries. The process monitors changes in temperature, current, and voltage.

**Inserting a Terminal**

1. Install the battery pack in the terminal; see Install the Main Battery on page 2-1.
2. Power the base; see Powering the Dolphin HomeBase Device on page 8-4.
3. Slide the terminal into the terminal well making certain that the terminal is seated properly.
4. The battery pack begins charging.

---

Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.
**Charging a Spare Battery**

The base can also charge a second battery while the terminal is positioned in the base. The second battery can be inserted in the battery charging well in back of the terminal connection. Place the battery in the well with the label facing up and toward the back of the unit. Angle the battery as shown. Once the connectors engage, the LED lights. If the LED is red, the unit is charging; if it is green, the charge is complete.

**Checking Battery Power**

To check battery power while the terminal is operating, tap **Start > Settings > Control Panel > Power.**

**Dolphin QuadCharger Device**

**Overview**

The Dolphin QuadCharger device is a four-slot charging station that charges up to four Li-ion battery packs in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge. For more details about charging, see *Battery Charging* on page 9-2.

⚠️ We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

⚠️ We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

⚠️ Ensure all components are dry prior to mating batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

**QuadCharger Device**

*Charging Slots*

The charger contains four charging slots. Each slot holds one battery. When a battery is placed in a slot, it immediately begins charging and its Status LED lights.

*Status LEDs*

A status LED is located at the end of each of the four battery slots. The color of the LED indicates the charge status of the battery in the slot.

- **Green**: The battery has completed its charge cycle and is ready for use.
- **Red**: The battery is charging.
**Power Supply Connector**

Use this connector to attach the power supply to the charger. The universal power supply accepts input voltages between 90–265 volts.

**Battery Charging**

**Charging Process**

This charger charges Dolphin 6510 Li-Ion 3300mAh packs in an average of 5 1/2 hours for a fully depleted battery. It takes less time if the battery has some charge. Each charging slot works independently of the other three. As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for Li-Ion batteries. The process monitors changes in temperature, current, and voltage.

**Temperature**

The six-hour charge time applies when batteries are charged within the recommended temperature range of 50° to 95° F (10° to 35°C). Temperature has a significant effect on charging. For best results, battery packs should be at room temperature before inserting in the charger.

⚠️ When the battery temperature exceeds 40°C, the charger may exceed the stated six-hour charge time. The charger stops charging if the battery temperature is greater than 40°C, but will begin charging again when the battery temperature is less than 40°C.

**Charging Batteries**

1. Supply the charger with power.
2. Insert batteries into the appropriate slots.
   The Status LED for each slot turns red to indicate that the battery is properly seated and has begun a charge cycle.
3. When the Status LED turns green, the battery in the slot has completed charging.

**Recommendations for Storing Batteries**

To maintain top performance from batteries, follow these storage guidelines:

- Avoid storing batteries outside of the specified temperature range of -4 to 104°F (-20 to 40°C) or in extremely high humidity.
- For prolonged storage, it is recommended that the battery be at a 40% - 50% charge level, be removed from the device, and stored in a controlled temperature environment. Following these recommendations will maximize battery life.

**Troubleshooting**

If you encounter problems with the charger, refer to chart below for possible solutions. If problems persist, contact **Product Service and Repair** (see page 12-1).

**Dolphin 6500 Net Base Device**

**Overview**

The Net Base enables up to four Dolphin 6510 mobile computers to communicate with a host device over an Ethernet network. In addition, the Net Base provides a second RJ45 Ethernet port for connection to an additional device such as a printer, workstation, eBase, or another Net Base.

*We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.*

**Unpacking the Net Base**

Open the shipping box and inspect the package to see that the following standard items are included:

- One Dolphin Net Base Ethernet cradle
- One universal AC/DC power adapter for the Dolphin Net Base
- One power cord

You will also need to provide a standard CAT-5 Ethernet network cable. These items are needed to set up and operate the Net Base. If any items are missing or anything appears to be damaged, contact your Customer Account Representative.

Keep the original packaging in case you need to return the Net Base for service or to store the Net Base while not in use.

**Charge Time**

The base supplies power to the intelligent battery charging system in all Dolphin terminals, which senses when a full charge has been achieved and switches to a trickle charge to maintain the full charge.

As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for Li-ion batteries. The process monitors changes in temperature, current, and voltage. The main battery of each terminal charges in 4 hours for the standard 3.7V battery or 6 hours for the extended 3.7V battery.

**Convenient Storage**

Intelligent battery charging makes this base a safe and convenient storage receptacle for your Dolphin terminal.

**Capacity**

The base can hold up to 4 Dolphin terminals. Each charging well charges each terminal independently of the other wells.

*We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.*

*We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.*
**Parts and Functions**

**Front Panel**

The Net Base contains four terminal wells. Each well has its own dedicated Power/Dock LED and COMM LED indicator.

Place the Dolphin terminal in any one of the four wells to communicate with a host device, power the terminal, and charge the installed battery pack. The Net Base completely charges the main battery in a Dolphin terminal in 4 hours for the standard 3.7V battery or 6 hours for the extended 3.7 battery.

**Power/Dock LED**

Indicates if power is supplied to the Net Base and if a terminal is docked properly in the terminal well. Each terminal well has its own dedicated Dock LED.

</tbody>
</table>

**COMM LED**

The COMM LED indicates the status of connection and data transfer between the Dolphin terminal and the Net Base. Each terminal well has its own dedicated COMM LED.

When the Dolphin terminal is docked:

*Note: The COMM LED does not necessarily indicate the Net Base and terminal are connected to a valid Ethernet link. For more information, see RJ45 Ethernet Ports on page 10-3.*
**Back Panel**

![Back Panel Diagram]

**DC Power Jack**

Use the power cable from Honeywell that comes with the Net Base to supply power to this power jack. For more information, see *Power* on page 10-4.

**RJ45 Ethernet Ports**

The Net Base contains two RJ45 Ethernet ports. You can connect the Net Base to an Ethernet-compliant device to facilitate Ethernet communication to and from the terminal by plugging a standard CAT-5 Ethernet cable into one of the two Ethernet ports provided. The second RJ45 Ethernet port can be used for connection to an additional device such as a printer, workstation, eBase, or another Net Base.

*Note*: The Net Base does not use a Spanning Tree Protocol (STP). When both RJ45 Ethernet ports are used, do not connect both Net Base interfaces to the same layer 2 LAN.

Each Ethernet port has a dedicated green and yellow status LED.

</tr>
</tbody>
</table>

*Note*: The terminal and Ethernet link must be set up properly to allow the terminal to communicate to other devices and/or the Internet. For more information, see *Connecting the Dolphin Terminal to the Net Base* on page 10-5.
**Bottom Panel**

For details on how to mount the Net Base, see *Mounting the Net Base* on page 10-6.

**Power**

The terminal requires 12 Volts DC input for communications and battery charging; the power adapter on the power cable converts the voltage from the power source to 12 volts DC. **Only** the Honeywell 12V/8.5A power supply provided with the Net Base converts the voltage appropriately. The operating temperature range is -10° to 50°C (14° to 122°F).

Honeywell recommends that you leave the Net Base connected to its power source at all times, so that it is always ready to use.

*We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.*

**Connecting Power to the Net Base**

1. Plug the A/C power cord into the power adapter.

2. Plug the power connector cable into the power connector on the back of the Net Base.

3. Plug the A/C power cord into a standard wall outlet. The LED on the Power Adapter illuminates to indicate power.

4. All four Power/Dock LEDs illuminate solid red to indicate the base has power. Terminal wells with properly docked Dolphins indicate power with a green LED.

5. The base is ready to begin charging terminals.
Charging the Main Battery

The base provides power to the Dolphin terminals and allows the charging of the main batteries in the terminals. The main battery of each terminal charges in 4 hours for the standard 3.7V battery or 5 hours for the extended 3.7V battery. The intelligent battery charging system incorporated into all Dolphin terminals prevents overcharging, which means that Dolphin terminals may be stored in the base indefinitely without damage to the terminals, battery packs, or the base.

To Power a Terminal and Charge its Main Battery

1. Install the main battery pack in the terminal; see Install the Main Battery on page 2-1.

2. Verify the base has power. If the Power/Dock LEDs are not illuminated, see Connecting Power to the Net Base on page 10-4.

3. Slide the Dolphin terminal into one of the four terminal wells. The Power/Dock LED for the well changes to green. Charging begins immediately if required by the Dolphin terminal.

   Make sure the terminal is dry before placing it in the Net Base. Do NOT place a wet terminal in the Net Base! Doing so may cause damage not covered by the warranty.

   We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

Communication

Software Requirements

Before you connect the Dolphin terminal to the Net Base, make sure you have the most current software installed. To check the terminal's system information, tap Start > Programs > Power Tools > SysInfo.

• In terminals running Windows CE 6.0, the kernel version must be 79.01 or later.

Applications on the Dolphin Terminal

Applications running on the Dolphin terminal when it is connected to the Net Base should be designed specifically for a partially connected network. For more details, please refer to the Best Practices for Partially Connected Networks document available at www.honeywellaidc.com.

Connecting the Dolphin Terminal to the Net Base

By default, the Dolphin terminal is configured to obtain IP addresses automatically using a DHCP server. This means that in most cases, you would simply plug-and-play the unit.

1. Verify the base has power. If the Power/Dock LEDs are not illuminated, see Connecting Power to the Net Base on page 10-4.

2. Plug the CAT-5 Ethernet cable into one of the RJ45 connectors on the back of the Net Base.
3. Plug the Ethernet cable into the network.

4. Insert the Dolphin into one of the terminal wells. The DOCK LED for the well changes from red to green and the connection icon on the Dolphin’s title bar changes from \( \rightarrow \) to \( \leftrightarrow \).

5. By default, the DHCP server assigns a unique IP address to each of the Dolphin terminals docked in the Net Base. This IP address can be used by any application on the Dolphin terminal.

Note: Instead of using the default for DHCP assigned IP addresses, the Dolphin terminal can use a statically assigned IP address. See standard Microsoft Windows Mobile documentation for how to assign a static IP address to a network adapter. In this case, set a static IP address for the adapter named "SMC95001 USB2.0 FAST Ethernet Drive".

**Displaying the Net Base Terminal Well and Dolphin IP Address**

Once the Dolphin terminal establishes communication, it uses the unique IP address assigned to the terminal well it is docked in on the Net Base. If four Dolphin terminals are successfully connected, then four different IP addresses are assigned to the adapter associated with the Dolphin terminal.

1. Tap Start > Programs > Power Tools > Network Utilities > IPConfig.

2. Change the **Adapter** to SMSC95001.

3. On the Input tab, tap the **Display full configuration** button.

4. The Dolphin terminal retrieves and displays the IP configuration for the entire Dolphin terminal and the Net Base terminal well where the Dolphin is docked.

5. Locate the **IpAddress** field in the IP configuration list.

**Mounting the Net Base**

Set the Net Base on a dry, stable surface, such as a desktop or workbench near an electrical outlet. Be sure to provide enough workspace with good lighting for the user to view and operate the Dolphin terminal while it is in the Net Base. When choosing a location, bear in mind that the mounting location must allow users easy access to the terminal wells, the Ethernet ports, and the power jack.
**Bottom Panel**

**Desk Mounting**

The DIN Rail (7.5 X 35 mm) slot on the bottom panel enables secure mounting on a horizontal surface.

**Hardware Required**
- 3/16 in. dia x 5/8 in. long pan head screw
- 1/2 in. OD x 7/32 in. ID x 3/64 in. thick
- 3/16 in. dia nut

**Installing the DIN Rail**
1. Slide the DIN Rail into the DIN Rail slot on the bottom panel of the base.
2. Turn the base and DIN Rail right side up.
3. Then, using the appropriate nuts and bolts, secure the DIN Rail to a stable, flat horizontal surface.
**Wall Mounting**

The optional wall mount bracket enables secure mounting of the base on a vertical surface. The wall mount bracket can be used in conjunction with the DIN rail but does not require the DIN Rail for use.

**Hardware (Provided)**

- M3 x 9 mm self-tapping screws, #2 Phillips, Qty. 4
- 3/8 in. x 4 in. round head toggle bolt, 2-5/8 in. usable length, Qty. 4
- 3/8 in. x 2 1/2 in. length Hex Head Lag Screw, Qty. 4

**Tools Required**

- Drill
- 7/8 in. Drill Bit (for hollow wall installations) or 1/4 in. Drill Bit (for wood stud installation)
- Phillips Screw Driver

**Hollow Wall Installation**

1. Drill four pilot holes in the wall using a 7/8 in. drill bit.

![Wall Mounting Diagram]

Wall Mount Holes

Wall Mount Bracket

Dimensions:
- 6.5 in. [16.5 cm]
- 13.78 in. [35 cm]
2. Slide the bolt through the wall bracket, and thread the toggle nut onto the bolt.

3. Press the ends of the toggle nut together, and insert the bolt/nut into the pilot hole until the nut clears inside wall surface. The toggle nut should spring open preventing the screw from being removed.

4. Repeat steps 2 and 3 for each of the remaining mounting holes.

5. Tighten all four bolts to secure the bracket to the wall.

6. Once the bracket is installed, secure the base to the wall bracket, see Securing the Base to the Wall Bracket for detailed instructions.

Wood Stud Installation

1. Drill four pilot holes in the wall/wood stud using the 1/4 in. drill bit.

2. Secure the bracket to the wall using the four Hex Head Lag Screws provided.

3. Once the bracket is installed, secure the base to the wall bracket, Securing the Base to the Wall Bracket for detailed instructions.

Securing the Base to the Wall Bracket

You can secure the base to the wall bracket using the optional DIN rail.

Hardware Required

- DIN Rail, Qty. 1
- 3/16 in. dia x 5/8 in. long pan head screw, Qty. 2
- 1/2 in. OD x 7/32 in. ID x 3/64 in. thick washer, Qty. 2
- 3/16 in. dia nut, Qty. 2

1. Position the DIN Rail on the wall bracket, as shown below.

2. Slide the screw through the slot on the DIN Rail and the mounting hole in the bracket.
3. Slide the washer onto the screw and tighten the nut to secure the assembly.

4. Remove the rubber feet on the bottom of the Net Base.

5. Slide the base onto the DIN Rail using the slot on the bottom of the base.
Dolphin 6500 Slide-On Handle

Overview

The optional slide-on handle provides a productivity-enhancing solution for applications that require high volume scanning, such as inventory management and stock replenishment.

Removing the Hand Strap

Prior to installing the Dolphin 6510 handle on the terminal, you must remove the hand strap.

1. Release the hook and loop portion of the strap and feed it through the opening at the bottom end of the terminal.
2. Remove the two screws that secure the top of the strap to the terminal.
3. Store the strap and screws for future use.

Installing the Handle/Removing the Handle

1. Place the terminal at an angle and snap it into place lining up the green buttons and headset jack on the sides of the terminal with the openings in the handle.
2. Using the attached screws, secure the handle to the terminal. The screws line up with the screw holes from the hand strap. To remove terminal, remove the screws and twist the terminal slightly and pull up.

Product Service and Repair
Honeywell International Inc. provides service for all of its products through service centers throughout the world. To obtain warranty or non-warranty service, you must first obtain a Return Material Authorization number (RMA#) and then return your product to Honeywell (postage paid) with a copy of the dated purchase record. To learn more, go to www.honeywellaidc.com and select Service & Repair at the bottom of the page.

For ongoing and future product quality improvement initiatives, the Dolphin 6110 comes equipped with an embedded device lifetime counter function. Honeywell may use lifetime counter data for future statistical reliability analysis as well as ongoing quality, repair and service purposes.

Limited Warranty
For warranty information, go to www.honeywellaidc.com and click Get Resources > Product Warranty.

Limited Warranty Duration
• The duration of the limited warranty for terminals with an integrated imager is one year.
• The duration of the limited warranty for touch screens is one year.
• The duration of the limited warranty for Dolphin HomeBase, Dolphin Mobile Mount, Dolphin ChargeBase, Dolphin Mobile Charger, and Dolphin QuadCharger is one year.
• The duration of the limited warranty for batteries is one year.
  Use of any battery from a source other than Honeywell may result in damage not covered by the warranty. Batteries returned to Honeywell International Inc. in a reduced state may or may not be replaced under this warranty. Battery life will be greatly increased when following the battery instructions in this user’s guide.

How to Extend Your Warranty
Honeywell International Inc. offers a variety of service plans on our hardware products. These agreements offer continued coverage for your equipment after the initial warranty expires. For more information, contact your Sales Representative, Customer Account Representative, or Product Service Marketing Manager from Honeywell International Inc., or your Authorized Reseller.
